Page 1 of 49  
Init.: JSA/  
Order no.: 946206  
No. of appendices: 35

**Requested by:** Company: Morsø Jernstøberi A/S  
Address: Furvej 19  
Postcode/town: DK-7900 Nykøbing Mors  
Country: Denmark  
Email: [info@morse.com](mailto:info@morse.com)  
Web: [www.morse.com](http://www.morse.com)

**Product:** Wood heater type: Morsø 2B Classic 2020

**Sample:** Receipt at DTI, Aarhus: 1. September 2020

**Test period:** Date of testing: 2.-4. September 2020

**Procedure** Testing of a wood heater in accordance with DTI method "ELAB-PP-BR-15" based on a relevant selection of standards and methods:

|  |     |
|--|-----|
| ASTM E2515-11  | Yes |
| ASTM E3053-17 (Cordwood)                                       | Yes |
| US EPA Method 28R in combination with ASTM E2780-10 (Cribwood) | No  |
| CSA B415.1-10  | Yes |
| EPA Communication on alternative method for Cordwood testing   | Yes |

**Result:** The stove/ meets the requirements of NSPS §40 CFR Part 60.

**Remarks:** See paragraph 2 - Remarks.

**Terms:** Accredited testing was carried out in compliance with international requirements, and the general terms and conditions of The Danish Technological Institute. The test results apply to the tested products only. This test report may be reproduced in extract only if the laboratory has approved the extract in writing. Danish Technological Institute is an EU Notified Body with identification number 1235 and DIN Certco test laboratory, PL 168.

**Issued:** 11. August 2021, Danish Technological Institute, Aarhus, Stoves&Boiler test lab

## 1. Introduction

### 1.1. General

This report concerns testing of a free-standing cast iron wood heater, type Morsø 2B Classic 2020

The certification test report holds 35 annexes. From this 2. revision of the report, do not any longer distinguish between CBI and non-CBI reports. The same unitary report applies for all purposes, meaning only one version of the report is issued.

Please find the full list of annexes in chapter 14.

Figures are stated in European notation, with a comma as the decimal separator and period as the thousand's separator.

### 1.2. Report revision history overview

| Release | Report number                                    | Number of pages (report only) | Issued date     |
|---------|--|-------------------------------|-----------------|
| initial | 300-ELAB-2526-EPA (CBI and non-CBI)              | 45 (non-CBI)                  | 18. Nov. 2020   |
| Rev 1   | 300-ELAB-2526-EPA Rev 1 211221 (CBI and non-CBI) | 45 (non-CBI)                  | 21. Jan. 2021   |
| Rev 2   | 300-ELAB-2526-EPA Rev 2 220621                   | 48                            | 22. June 2021   |
| Rev 3   | 300-ELAB-2526-EPA Rev 3 250621                   | 49                            | 25. June 2021   |
| Rev 4   | 300-ELAB-2526-EPA Rev 4 110821                   | 49                            | 11. August 2021 |

### 1.3. Revision 1 changes

- New issue date 21. January 2021 and revision # raised to Rev 1
- Clause 3.5 amended with the laboratory's declaration of test appropriateness, starting with "Based on the evidence above"
- Clause 3.6 amended with the laboratory's declaration of test appropriateness, starting with "Based on the evidence above"
- Clause 3.8 amended with the laboratory's declaration of test appropriateness, starting with "Based on the evidence above"
- Annex 35; new annex holding the laboratory hand notes

### 1.4. Revision 2 changes

- New issue date 22. June 2021 and revision # raised to Rev 2
- Clause 1.1 General amended with notice of abandoning of distinguishing between a CBI and a non-CBI report. Now one unitary report applies for all purposes.
- New clause 1.3 added, holding the EPA list of findings
- Clause 3.2, further elaboration of the reason for discarding of the HF1 test due to a clogged filter
- Clause 4.2, Note added on discarding of the HF1 results
- Report page count raised from 45 to 48

### 1.5. Revision 3 changes

- New issue date 25. June 2021 and revision # raised to Rev 3
- Clause 7.3, the test string "and the action of the air controls" was added
- Revised Annex 26, Assembly drawings showing in detail how the lower restriction of the air controls is accomplished, notably drawing 2B-148 (Primary Air Controls) showing the bushing which stops the spinner from being closed below three quarters of a turn. Further drawing 2B-511 (Main assy drawing) displaying an explanatory note on the air controls extreme settings, the minimum being 0,75 turn which resembles an effective open valve area of 212 sq mm.
- Revised annex 31a, US Users' manual, on page 9 (printed manual pages 14-15) providing information in a highlighted frame on the nature of the lower air controls restriction and a warning of NOT to tamper with the physical stop.
- Revised annex 31b, CAN(Fr) Users' manual, the same warning

- Revised annex 34, Manufacturers' QA plan, showing on page 4 where and how to check the action of the air controls, again emphasizing that the minimum primary air controls setting is 0,75 turn corresponding to a gap between the spinner and the door on approximately 1 mm
- Report page count raised from 48 to 49

## 1.6. Revision 4 changes

- New issue date 11. August 2021 and revision # raised to Rev 4
- New clause 1.3 added, describing the report changes from the initial (final) report to the Rev 1 report
- New clause 1.4 added, describing the report changes from the Rev 1 to the Rev 2 report
- New clause 1.5 added, describing the report changes from the Rev 2 to the Rev 3 report
- New clause 1.6 added, describing the report changes from the Rev 3 to the Rev 4 report

## 1.7. List of Issues found (ref. Sanzhez email of June 10. 2021)

| List of Issues Found   |  |  |  |  |
|--|--|--|--|--|
| Issue  | Applicable Method/Rule Section   | Notes  | How the manufacturer/test lab addressed the issue  | Clause # or page # where to find addressing of irregularities  |
| 1. Page 32 "For the low fire test, after ignition the air valve is throttled to 3 quarters of a revolution open, and for the medium fire test, after ignition the air valve is throttled to 1 and one quarter of a revolution open."<br><br>Need to document that the stove cannot burn any lower than the ¾ turn as described in the low burn test.<br><br><b>See additional notes below.</b> | <b>40 CFR 60.537 (2)</b> All documentation pertaining to the certification test used to obtain certification, including the full test report and raw data sheets, laboratory technician notes, calculations, the test results for all test runs, and discussions of the appropriateness and validity of all test runs, including runs attempted but not completed. The retained certification test documentation must include, as applicable, detailed discussion of all anomalies, whether all burn | Manual says that the low fire is fixed and cannot be adjusted further.<br><br>This means that it was tested at the lowest possible burn rate. <b>Is that assertion correct?</b><br><br>Need clarification in the TR about the ¾ turn for the low burn setting. | There is a fixed stop in place on production models that prevents the air controls from being closed more than as tested (3/4 of turn), which results in a linear measurement of 1mm between the spinner and the frame. The appliance cannot be turned any lower down than what was tested. This restriction is shown in detail in drawing 2B-148, page 7 of annex 26 (assembly drawings) and further in drawing 2B-511, page 2 of annex 26 (reply clarified the 21/6 2021 by JSA) | Annex 26 (assembly drawings), page 2, the main assy drawing 2B-511 and on page 7, primary air controls assy, drawing 2B-148 (21/6 JSA) |

|  |   |                     |  |  |
|--|---|---------------------|--|--|
|  | <p>rate categories were properly achieved, any data not used in the calculations and, for any test runs not completed, the data that were collected and the reason that the test run was not completed. <b>The retained certification test also must include documentation that the burn rate for the low burn rate category was no greater than the rate that an operator can achieve in home use and no greater than is advertised by the manufacturer or retailer.</b></p> |                     |  |  |
| 2. Page 36, Discussion of Results doesn't document run appropriateness | <p><b>The basis for determining whether or not the appliance has complied with this requirement is based on 40 CFR 60.533(b)(5). Per the requirement, "Documentation must include discussion of each test run and its appropriateness and validity, and must include detailed discussion of all anomalies, whether all burn rate categories were achieved, any data not used in the calculations and, for any test runs not completed, the data collected during</b></p>      | Revised discussion. | <p><b>The test run summaries (sections 3.3, 3.5, and 3.7) have been edited to state that the runs were determined to be appropriate.</b></p> <p>(reply modified the 21/6 by JSA – former page numbers deleted)</p> | <p>End of section 3.3 on page 14;</p> <p>End of section 3.5 on page 18;</p> <p>End of section 3.7 on page 21</p> <p>(21/6 JSA)</p> |

| the test run and the reason(s) that the test run was not completed and why."   |  |  |   |  |
|--|--|--|---|--|
| 3. Page 54-56, Annex 3 says, "Sequence of images from the tests, the 5th February 2020" but report indicates test was 9/2/2020.  |  | Date just needs to be changed in the test report.  | This was a typo that has been corrected.  | Annex 3 cover page; Annex 3 header on pages 2-4 (21/6 JSA)   |
| 4. Page 484 – doesn't include proper use of air controls and proper low fire operation.<br><br>In manufacturer instructions to the lab they included things such as turning controls 3 1/4 for fully open etc. | <b>40 CFR 60.536 (g)(3)(iii)</b> Proper use of air controls, including how to establish good combustion and how to ensure good combustion at the lowest burn rate for which the heater is warranted. | Would recommend manufacturer modifying text to give more description on home use instructions on operating the air controls. | User manual instructions have been updated to provide more clarity on various operational settings including images for better guidance<br><br>(reply modified and clarified the 21/6 by JSA – former page number deleted)  | Annex 31a Users' manual (US) page 9;<br><br>Annex 31b Users' manual (CAN) page 9<br><br>(21/6 JSA)   |
| 5. Did not see raw data sheets for filter weighing etc.<br><br>6. Did not see raw data sheets for dry gas meter for each test run.   | <b>40 CFR 60.533 (b)(5)</b>  | Need filter weight raw data sheets and raw technician notes. <b>Submit data.</b>   | Technician notes have been added to the report, see Annex 35<br><br>Gas meter values are recorded pre- and post test only, in-test monitoring of sample rates and proportionality are done via calibrate flow meters, data from these flow meters are shown on raw data sheets.<br><br>Calibration certificates by external Force Technology to be seen in Annex 15, page 34-36 (main train – instrument id 144236 tracible to DTIs' instrument database<br>And further page 37-39 (split train – instrument id 144239)<br><br>(reply amended the 21/6 by JSA – Flow metering details added and former page number deleted) | Annex 35 in its entirety;<br><br>Annex 21 HF1 Logger data, page 7-11 (main train flow vel. in the right most column, labelled Flow H) and pages 12-16 (split train flow vel. in the left most column, labelled Flow D)<br><br>And similarly in annexes 22-25 for the remaining tests<br><br>(21/6 JSA) |

|  |   |  |  |
|--|---|--|--|
| 7. HF1 was omitted and we see the description in the anomalies section which we find acceptable.           | If the TR is being modified, then please make the appropriate changes to justify the exclusion of HF1.<br>A statement in each table that says:<br>"HF1 was excluded due to a clogged filter." | There are no fewer than 6 references to the fact that HF1 was excluded due to filter issues, including all the relevant summary tables (3.1, <b>3.2</b> , 4.1, 4.2, and <b>11</b> )<br>As well as the individual run summary section ( <b>3.3</b> ), where else would you have us include this information?<br><br>(reply amended the 21/6 by JSA – the statement "HF1 was excluded due to a clogged filter" was amended to the explanatory note underneath clause 3.2 'Main results') | Clause 3.2 on page 10;<br>Clause 3.3 on page 14 (bottom);<br>Clause 11 on page 40 (21/6 JSA) |
| 8. HF1 in other sections (tables) needs the same note stating that it was omitted due to a clogged filter. |   |  |  |

## 1.8. Scope of testing

The appliance was tested to demonstrate compliance with the NSPS 2020 limits, using the ASTM E3053 ALT-125 Cordwood test method broadly accepted by the administrator. Please find the letter of acceptance enclosed in annex 1.

## 1.9. Site

Testing was accomplished by Danish Technological Institute, Kongsvang Allé 29, DK-8000 Aarhus C, Denmark in accordance with DTI's accredited EPA test procedure ELAB-PP-BR-15.  
The test procedure is amended in annex 14.

## 1.10. Participants

### DTI staff

Testing in the laboratory was accomplished by:

- Jes Sig Andersen, Senior Specialist (lead)
- Rene Lyngsø Hvidberg, Senior specialist (trainee)

### Client staff

The test work was witnessed by:

- Frank Juel Nielsen, Morsø Jernstøberi A/S

## 1.11. Test specimen

The stove was manufactured by:

Company: Morsø Jernstøberi A/S  
Address: Furvej 6

Postcode/town: DK-7900 Nykøbing Mors  
Country: Denmark

The stove weighs 98 kg.

The stove is not equipped with a catalyst. The landscape type of firebox is deeper than its wide, accommodation up to half a meter wood logs.

**Variants:** At the time of testing there was no known variants of the 2B Classic 2020 wood heater.

## 1.12. Description of the wood heater

**Appliance Manufacturer:** Morsø Jernstøberi A/S

**Wood Stove Model:** 2B Classic 2020

**Type:** Freestanding, radiant-type wood fired room heater.

### **WOOD HEATER DESCRIPTION**

**Materials of Construction:** The unit is constructed primarily of cast iron with a stainless-steel secondary combustion air supplying baffle. The firebox is lined with molded vermiculite firebricks. The feed door has a 145 mm by 158 mm glass panel and one 870 mm by 8 mm glass fiber gasket. The ash door is sealed with one 570 mm by 8 mm glass fiber gasket.

**Air Introduction System:** Air enters the firebox through a spin-draft located at the front of the appliance at the top of the fuel-loading door. Secondary air enters the appliance through the upper back and supplies a three-step, tiered hollow baffle.

**Combustion Control Mechanisms:** The combustion air inlet is controlled by a spin draft on the fuel-loading door.

**Combustor:** N/A.

**Internal Baffles:** A stainless steel baffle with a ceramic blanket is mounted in the upper portion of the firebox. The flame path is forced to the front of the firebox where it travels up through the opening between the baffle and primary air manifold.

**Other Features:** N/A.

**Flue Outlet:** The 6" diameter flue outlet is located at the top of the unit.

**Firebox volume:** 0,01943 m<sup>3</sup> or 0,6826 ft<sup>3</sup> calculated in SolidWorks CAD simulator. Please find the firebox drawing showing details on the firebox dimensions amended in Annex 33

## 2. Aging prior to testing

The stove had been aged more than 50 hours of operation prior to the certification test while pre-testing at Morsø including:

- The 21<sup>st</sup> of August 10 hours
- The 24<sup>th</sup> of August 10 hours
- The 26<sup>th</sup> of August 10 hours
- The 27<sup>th</sup> of August 10 hours
- The 28<sup>th</sup> of August 11 hours

Please find the set of pre-conditioning data in annex 2.

### 3. Summary of test results

#### 3.1. Test schedule

The full certification test comprises three HF test runs, one MF test run and one LF test run.

| Date     | Test I  | Test II | Remarks  |
|----------|---------|---------|--|
| 2-9-2020 | HF test | LF test | Both tests valid, however the HF filters clogged |
| 3-9-2020 | HF test | MF test | Both tests valid                                 |
| 4-9-2020 | HF test | none    | Valid HF test                                    |

#### 3.2. Main results

Please see also the full set of test results in table of chapter 11 and with more decimals in section 4.10

|     |                  | Burn rate kg dry matter/hour | Emission grams/hour |
|-----|------------------|------------------------------|---------------------|
| #1* | HF1 2-9          | 1,92                         | 2,3                 |
| #2  | LF 2-9           | 0,61                         | 0,1                 |
| #3  | HF2 3-9          | 2,05                         | 1,7                 |
| #4  | MF 3-9           | 0,92                         | 0,3                 |
| #5  | HF3 4-9          | 2,33                         | 1,1                 |
|     | Weighted average |                              | 0,5                 |

\*) The HF1 test is discarded of in the weighted average emission calculation. HF1 was excluded due to a clogged filter. Please find details in the test summary below in section 3.3

#### 3.3. Summary of the CS+HF and LF tests the 02-09-2020

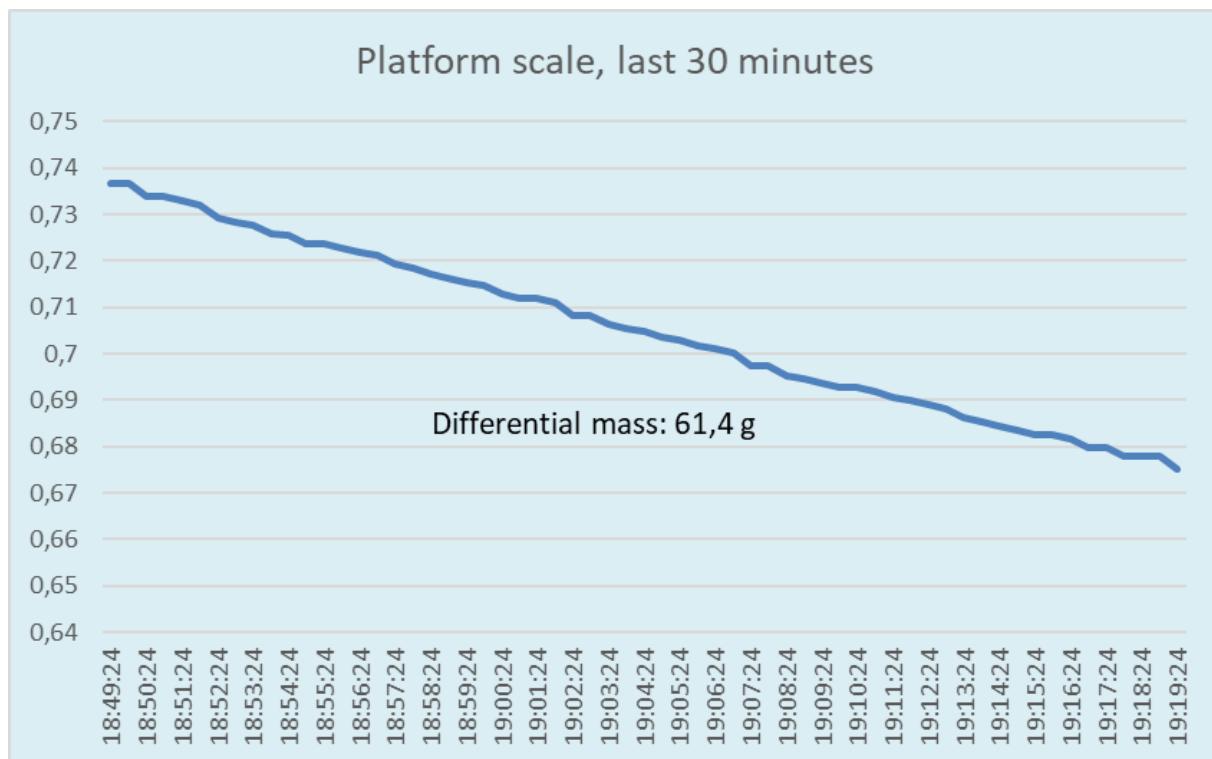

Data logger files Id: 2020-09-02\_08:43:10 (CS+HF) and 2020-09-02\_14:01:25 (LF)

|             |  |
|-------------|--|
| 12:19:15    | Ignition of the Cold Start part test using the gas torch for 45 seconds. The air valve is set in position 100% open (full action = 3 and one quarter revolution open). 0.604 kg of kindling (10% moisture DB) and 0.913 kg start-up fuel (19,7% moisture DB) was entered |
| 12:20:00    | Ignition is over, the door is kept ajar.   |
| 12:24:00    | The door is closed, and the air valve is maintained in its fully open position   |
| 12:47:05    | End of the Cold start at 550 grams of embers, which value is taken down. The embers are evened out   |
| 12:47:10    | Loading of the High Fire fuel load; 4 logs of 3,155 kg beech wood (19.1% moisture DB)  |
| 12:47:50    | End of loading time after 40 seconds.  |
|             | The door was closed right away, and the air valve was maintained in its fully open position, being the High Fire setting allowing maximum output rate  |
| 13:19:15    | Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading 8856,9 normal litres  |
| 13:40-13:50 | The flow rate of the main train needs repetitive adjustments, the filter has taken on to clogging  |
| 13:50:45    | PM sampling in the main train is suspended and the pair of filters extracted   |
| 13:53:50    | PM sampling in the main train is resumed on a fresh pair of filters  |
| 14:00:30    | End of High Fire test cycle at 300 grams of embers (net). The combined bed of ember mass at the end of the High fire test hence amounted 550+300 = 850 g. The bed of embers was evened, and the air valve kept in its fully open position                                |
| 14:06:00    | Loading of the Low Fire fuel load; 5 logs of in total 3,840 kg of firewood (19,5% moisture DB) at platform scale reading 675 grams   |
| 14:06:50    | End of loading time after 50 seconds has elapsed; the door is closed right away  |
| 14:15:35    | The air valve is throttled to its final position being ¾ of a revolution open according to the 15% of the fuel load mass combusted criteria  |
| 15:06:20    | Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading 9577,91 normal litres   |
| 19:19:48    | The Low Fire test is over at platform scale reading of 675 grams   |

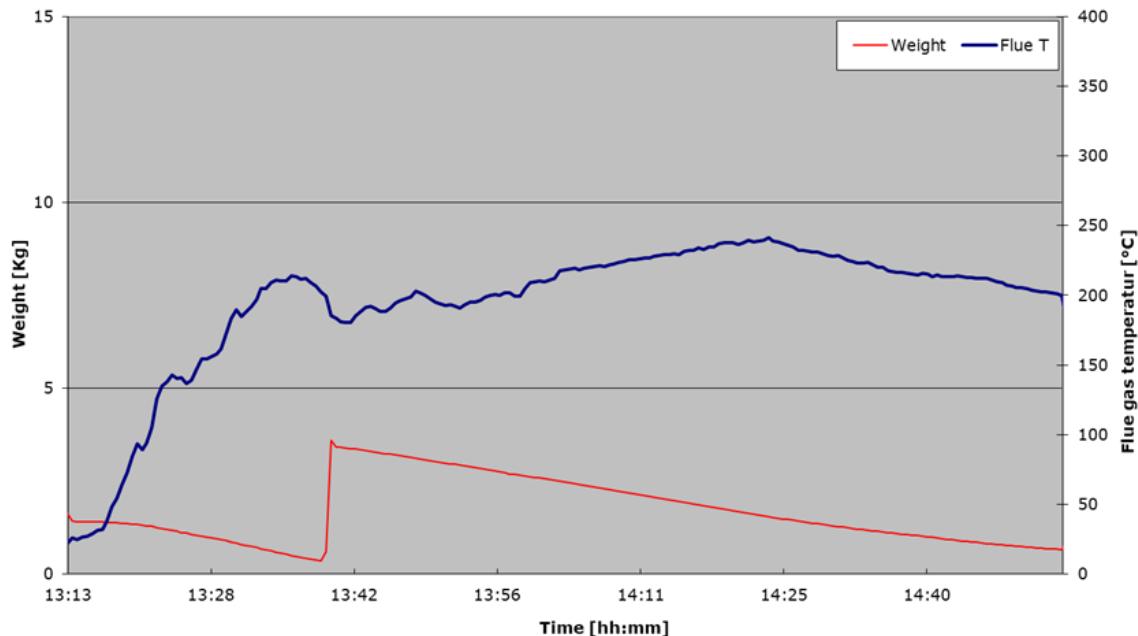

|            |  |
|------------|--|
| Post Check | The mass combusted during the last 30 minutes of the LF test was 736,6-675,2 = 61,4 grams, thus rendering the LF test valid with respect to the fire out criteria of no less the 50 g combusted during half an hour. |
|------------|--|

Please find the corresponding sequence of images in annex 3

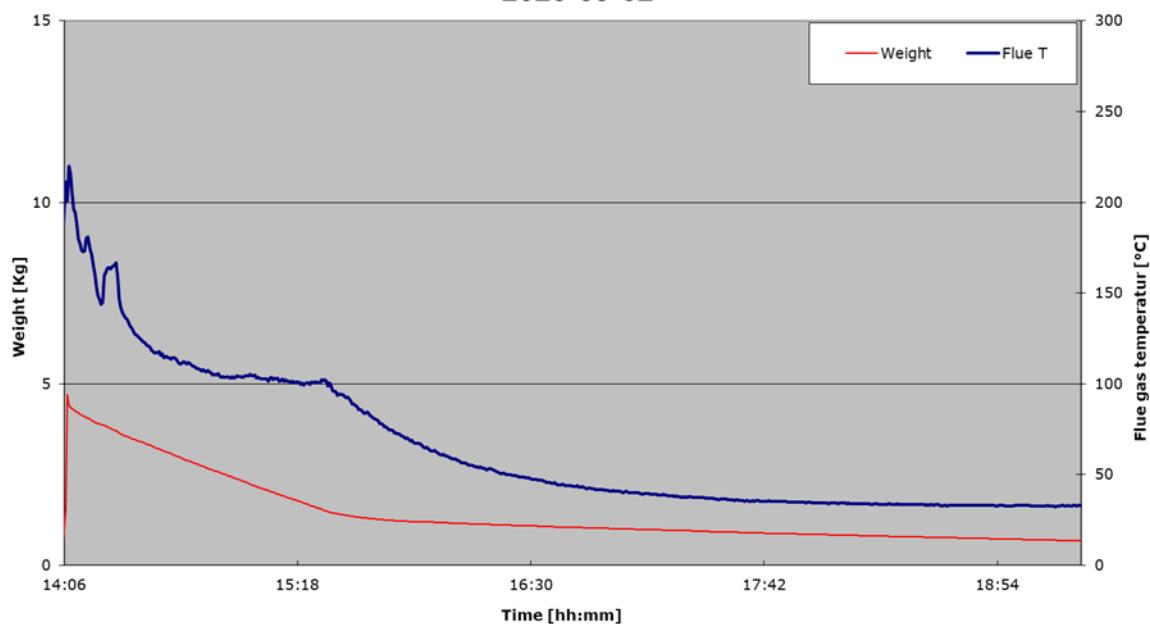

Course of combustion and residual mass over the last 30 minutes of the Low Fire test

### High fire 1 test 2020-02-05

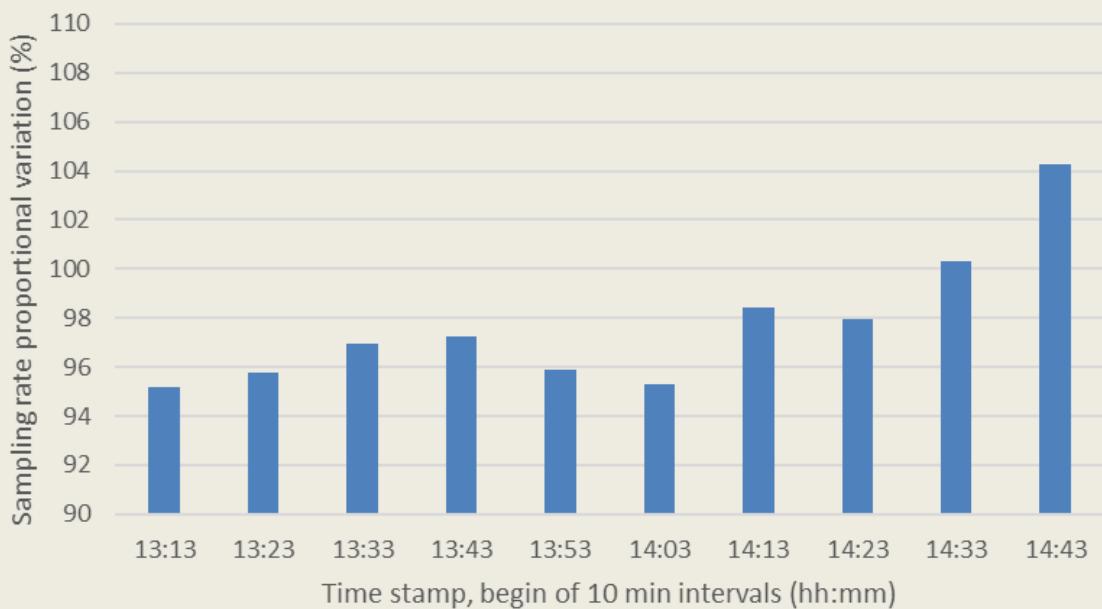

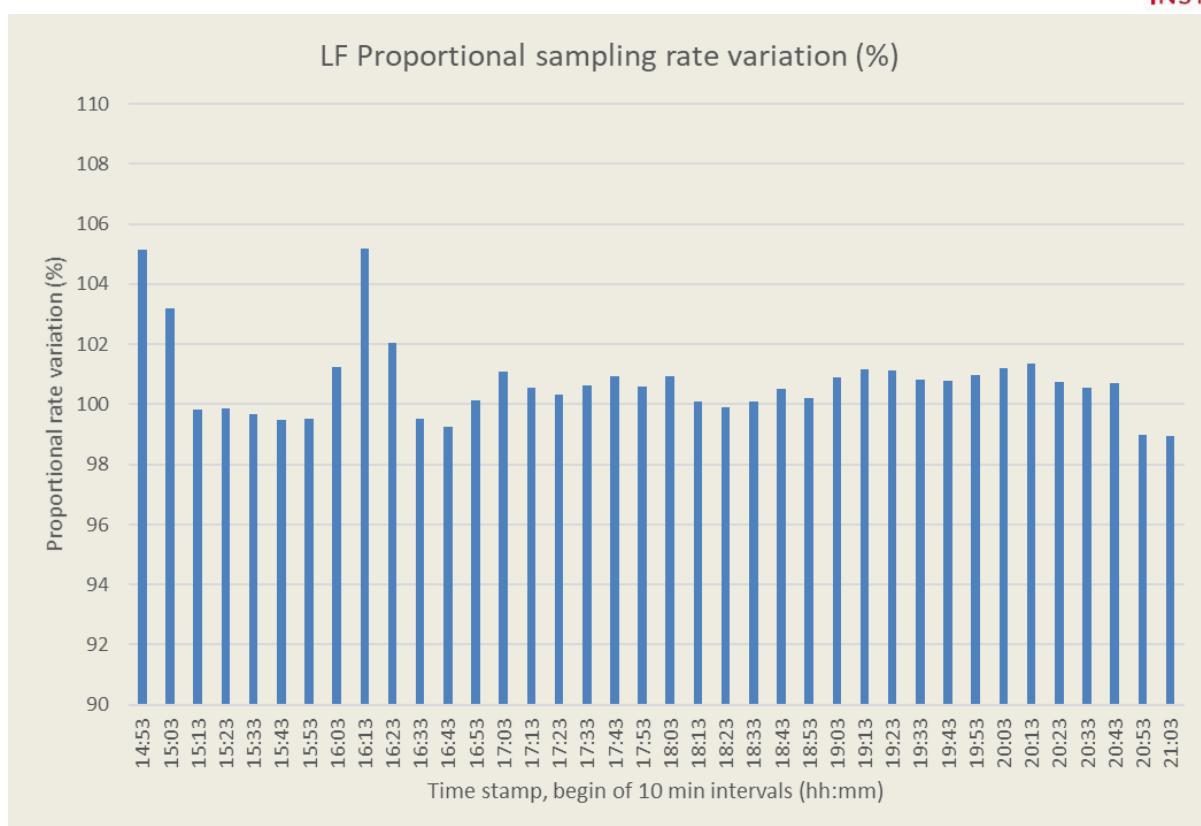

Low Fire test - #2  
2020-09-02

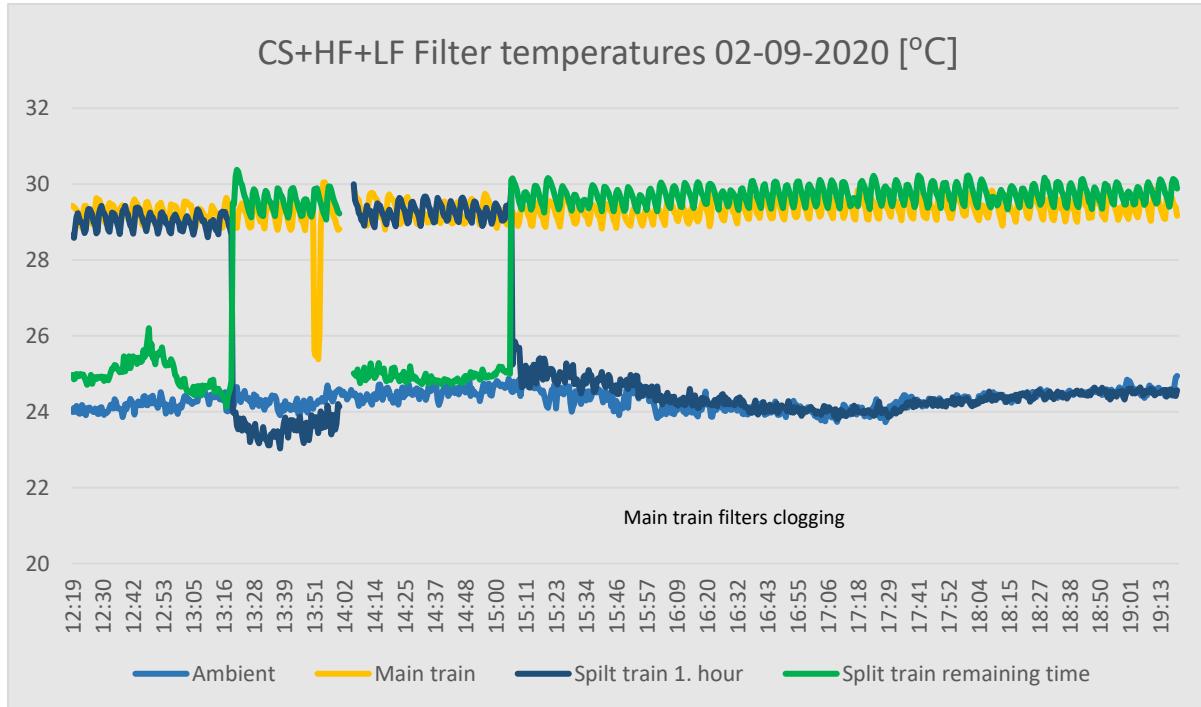

HF1 proportional sampling rate variation [%]

CS and HF1 (#1) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

LF (#2) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

Evidence of filter temperature maintained in-between 26,7-32,2 °C (80-90 F) on the 2<sup>nd</sup> of September as per Alt-125 letter clause 1) requirement modifying the ASTM E2515

| Time     | EPA<br>Flue gas<br>Temperature<br>(°C) | Surface<br>temperature<br>Top (°C) | Surface<br>temperature<br>Rear (°C) | Surface<br>temperature<br>Right side<br>(°C) | Surface<br>temperature<br>Left side (°C) | Surface<br>temperature<br>Bottom (°C) | Mean<br>temp<br>(°C) |
|----------|--|------------------------------------|-------------------------------------|--|--|---------------------------------------|----------------------|
| 12:19:15 | 23,3                                   | 24,3                               | 24,0                                | 25,9   | 25,4                                     | 24,7                                  | 24,9                 |

Evidence of cold starting conditions on day one, the 2<sup>nd</sup> of September 2020 to ASTM E3053 clause 8.5.1 (Ambient temp was 24,0 degr C at 12:19:15 hours)

Based on the evidence presented above and, DTI declares test runs #1 (Cold start and High fire 1 test) and #2 (Low fire test) was determined to be conditional and appropriate. Because the filter clogged and sampling had to be suspended temporarily during test run #1, **we exclude test run #1, meaning it will not be used for the average result calculations.** Test run #2 however is deemed valid in any respect.

Please also see section 3.9 Anomalies for further discussion of the test run #1 filter clogging incident.

### 3.4. Duct traverse data 2. September 2020

| Measuring points<br>ref. ASTM E2515<br><br>Fig 6 | Start | Intermed. | Center | Intermed. | Last   |            |
|--|-------|-----------|--------|-----------|--------|------------|
|  | 6,70% | 25%       | 50%    | 75%       | 93,30% | [relative] |

Resulting pitot factor Fp: 0,92

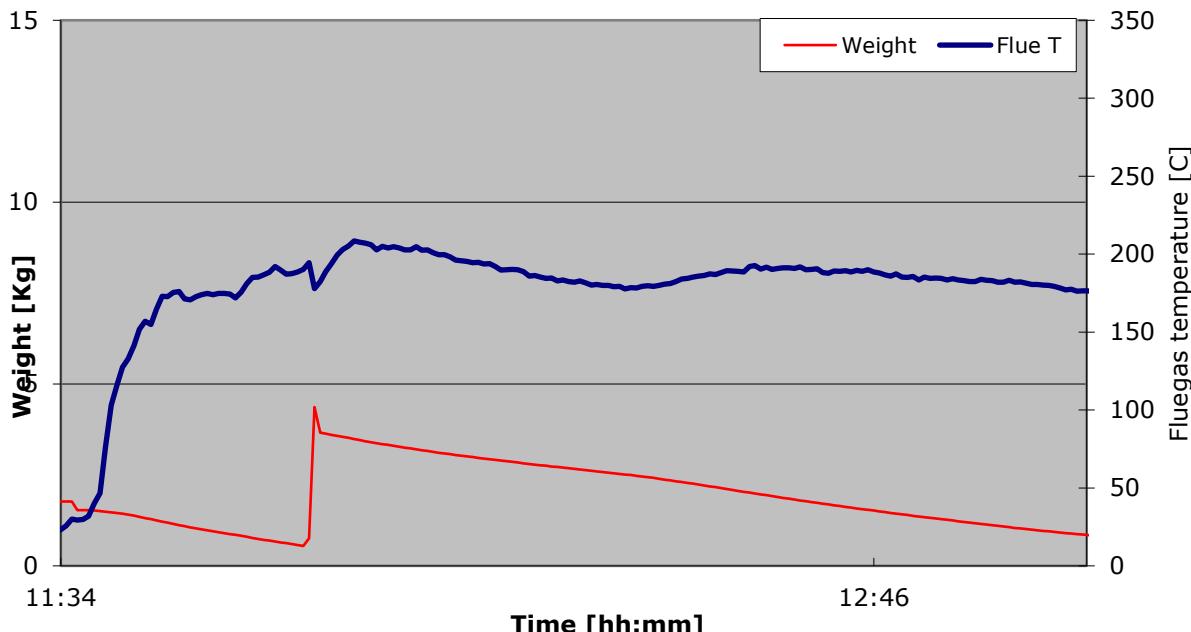

### 3.5. Summary of the CS+HF and MF tests the 03-09-2020

Data logger file Id: 2020-09-03\_08-30-28

|          |   |
|----------|---|
| 11:34:00 | Ignition of the Cold Start part test using the gas torch for 60 seconds. The air valve is set in position 100% open (full action 3 and one quarter revolution). 0.603 kg of kindling (10% moisture DB) and 0.897 kg start-up fuel (19,7% moisture DB) was entered |
| 11:39:45 | Ignition is over, the door is closed. The air valve is maintained in its fully open position  |
| 11:55:26 | End of the Cold start at 550 grams of embers, which value is taken down. The embers are evened out  |
| 11:55:30 | Start loading of the High Fire fuel load using 4 logs of 3,190 kg firewood (19,3% moisture DB)  |
| 11:56:25 | End of loading time after 55 seconds.   |
| 12:01:25 | The door was closed after 5 minutes a/cracc, and the air valve was kept in its fully open position  |
| 12:34:00 | Change of the split train filter holder arrangement at the hour, at gas meter reading 11828,3 normal litres   |
| 13:04:51 | End of High Fire test cycle at 300 grams of embers (net), the combined bed of ember masses at the end of the High fire test was hence 550+300 = 850 g.<br>The bed of embers was evened, and the air valve kept in its fully open position                         |
| Break    | Pass time to meet the LF start of test criteria   |
| 13:14:40 | At the platform scale reading of 675 grams, start loading of the Medium Fire fuel load using 5 logs of in total 3,736 kg of firewood (19,4% moisture DB)  |
| 13:15:25 | End of the loading time after 45 seconds and the air valve kept fully open to a start and then slowly reduced stepwise.   |
| 13:19:30 | At platform scale reading 4,25 kg, the air valve is set in its final MF position being 1 and a quarter revolution open  |
| 14:14:40 | Change of the filter holder arrangement in the split extraction train at the hour, at gas meter reading 12471,6 normal litres   |
| 16:38:18 | The Medium Fire test is over at platform scale reading of 675 grams   |

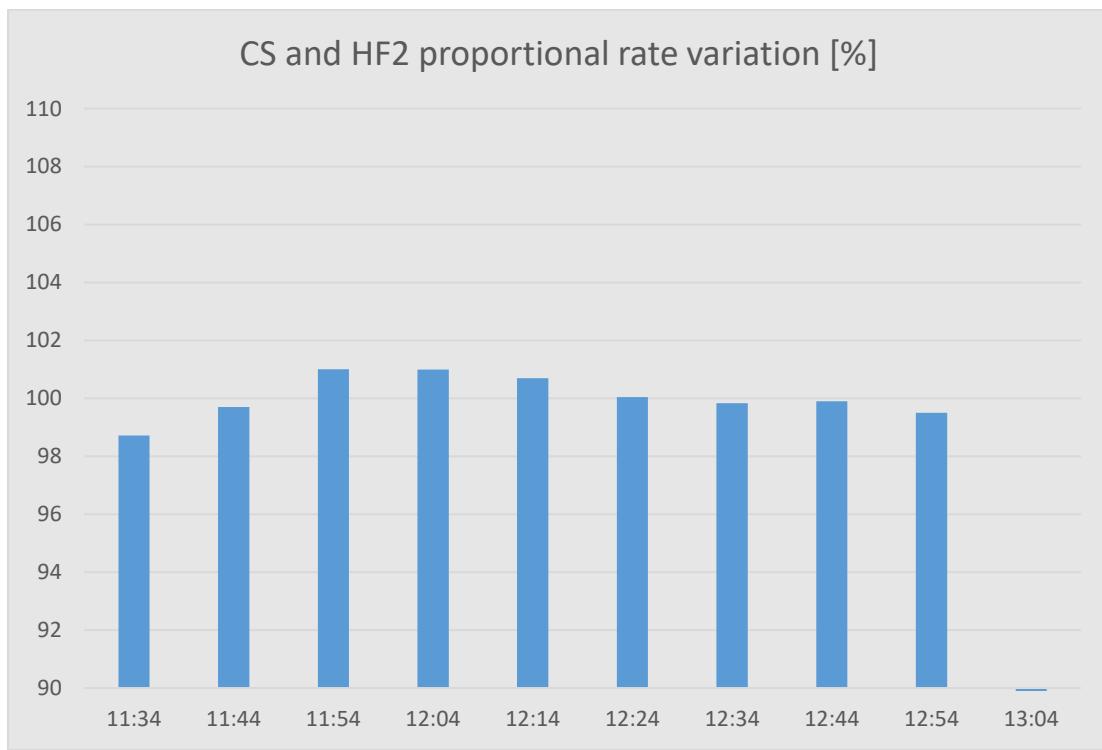

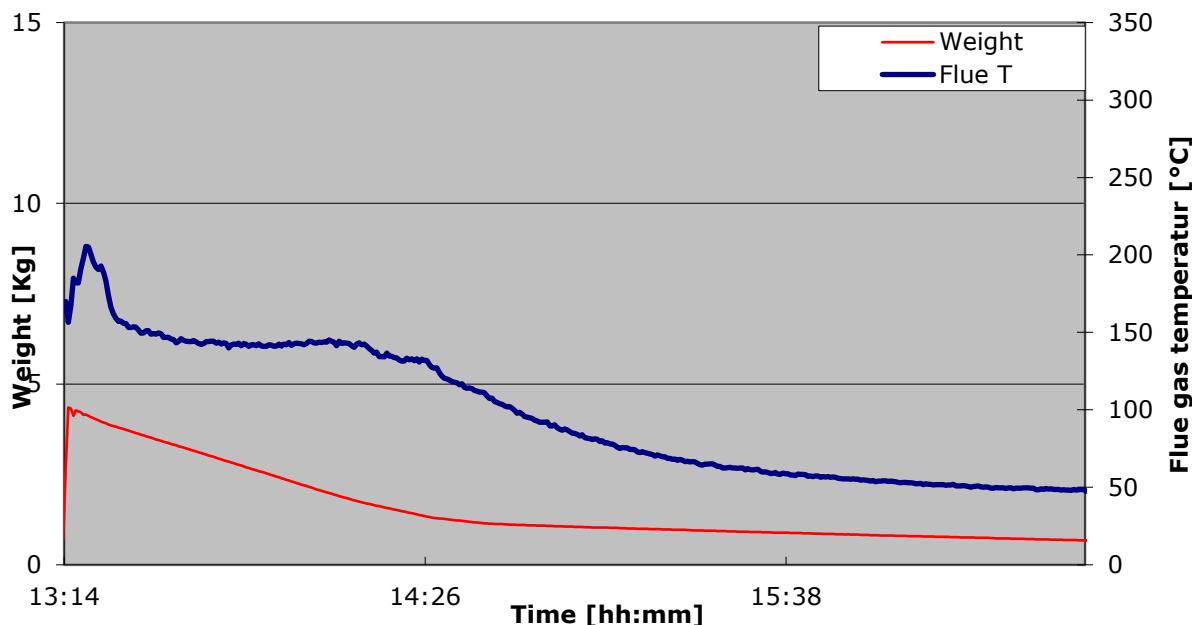

Please find the corresponding sequence of images in annex 4

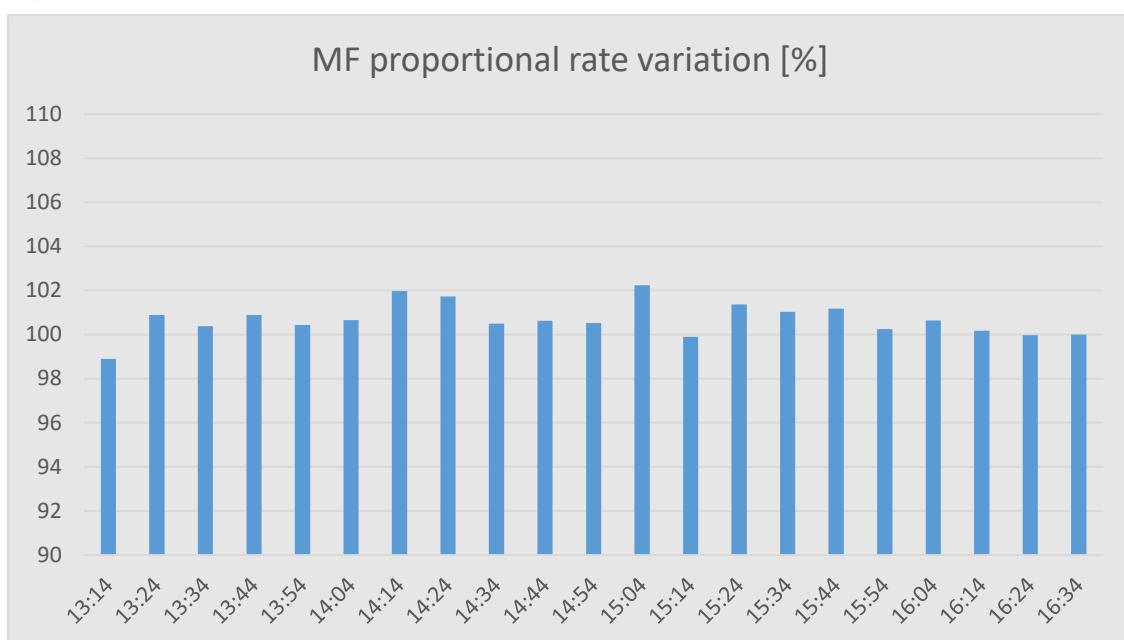

High Fire 2 test (#3)  
2020-09-03

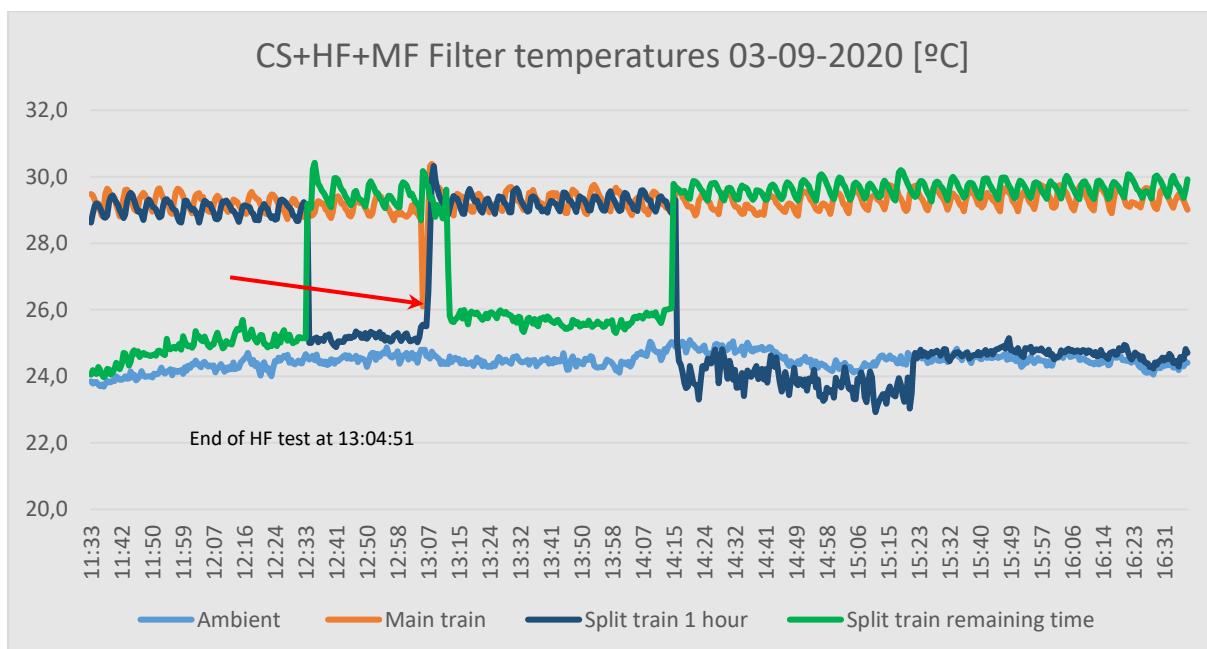

Medium Fire test (#4)  
2020-09-03

MF (#4) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

Evidence of filter temperature maintained in-between 26,7-32,2 °C (80-90 F) the 3rd of September as per Alt-125 letter clause 1) requirement modifying ASTM E2515

| Time     | EPA Flue gas Temperature (°C) | Surface temperature Top (°C) | Surface temperature Rear (°C) | Surface temperature Right side (°C) | Surface temperature Left side (°C) | Surface temperature Bottom (°C) | Mean temp (°C) |
|----------|-------------------------------|------------------------------|-------------------------------|-------------------------------------|------------------------------------|---------------------------------|----------------|
| 11:34:00 | 23,0                          | 24,3                         | 23,6                          | 25,5                                | 24,9                               | 24,5                            | 24,6           |

Evidence of cold starting conditions on day two, the 3<sup>rd</sup> of September 2020 to ASTM E2515 clause 9.8.1 (Ambient temp was 23,8 degr C at 13:34:00 hours)

Based on the evidence presented above, DTI declares test runs #3 (cold start and high fire 2) and #4 (medium fire test) were determined to be as well appropriate as valid.

### 3.6. Duct traverse data the 3. September 2020

| Measuring points<br>ref. ASTM E2515<br>Fig 6 | Start | Intermed. | Center | Intermed. | Last   |            |
|--|-------|-----------|--------|-----------|--------|------------|
|  | 6,70% | 25%       | 50%    | 75%       | 93,30% | [relative] |

| 31,5                              | Pd [Pa] | 26,5                     | Temp [°C] |  | 48,4                             | Ps [Pa] |  |

Resulting pitot factor Fp: 0,92

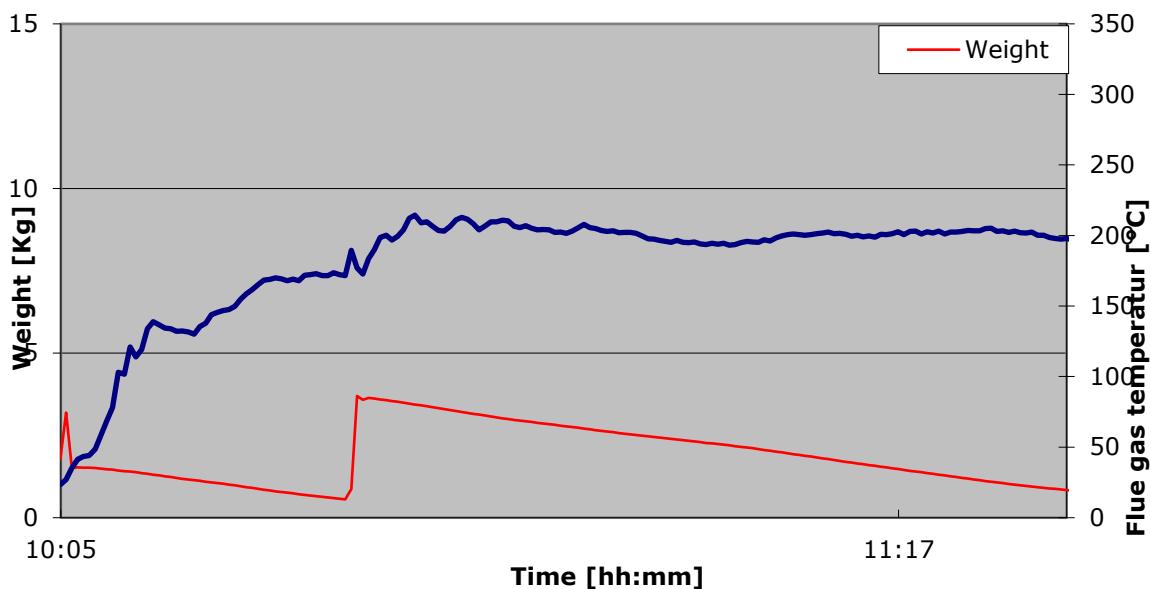

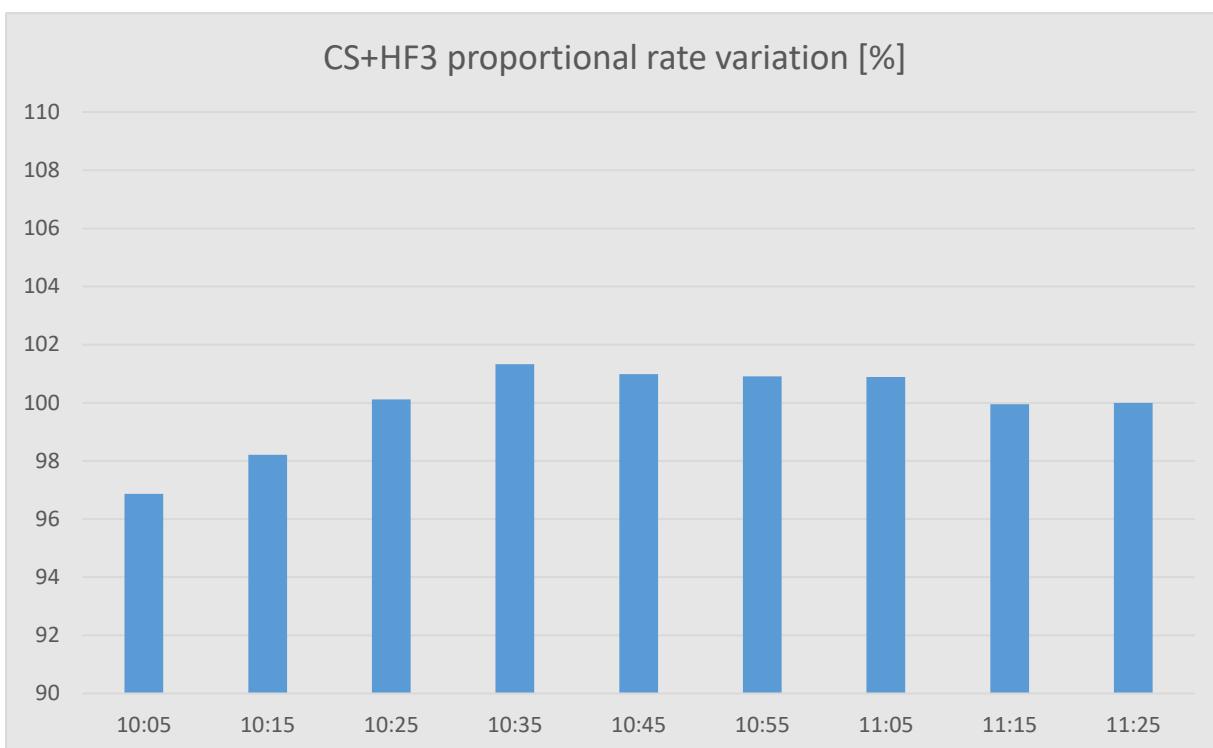

### 3.7. Summary of CS+HF test the 4-09-2020

Data logger file Id: 2020-09-04\_09-16-26

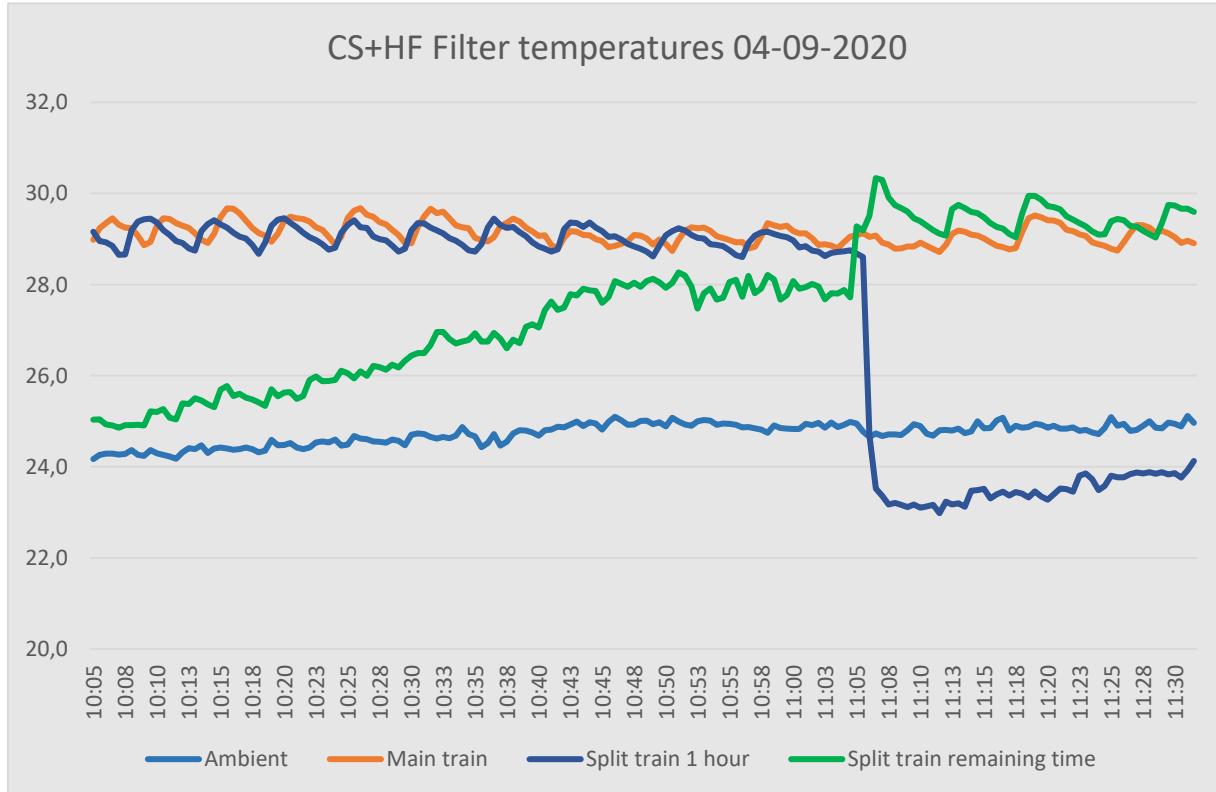

|          |   |
|----------|---|
| 10:05:58 | Ignition of the Cold Start part test using the gas torch for 55 seconds. The air valve is set in position 100% open (full action 3 and one quarter revolution). 0.605 kg of kindling (10% moisture DB) and 0.909 kg start-up fuel (19,5% moisture DB) was entered |
| 10:11:54 | Ignition is over, the door is closed. The air valve is maintained in its fully open position  |
| 10:30:40 | End of the Cold start at 550 grams of embers, which value is taken down. The bed of embers is   |
| 10:31:00 | Start loading of the High Fire fuel load using 4 logs of 3,183 kg firewood (19,2% moisture DB)  |
| 10:31:55 | End of loading time after 55 seconds.   |
| 10:36:50 | The door was closed after 5 minutes and 50 seconds a/c/ac, and the air valve was kept in its fully open position  |
| 11:05:58 | Change of the split train filter holder arrangement at the hour, at gas meter reading 13924,5 normal litres   |
| 11:32:25 | End of High Fire test cycle at 290 grams of embers (net), the combined bed of ember masses at the end of the High fire test was hence 550+290 = 840 g.  |

CS and HF3 test (#5)  
2020-09-04

CS and HF3 (#5) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

Evidence of filter temperature maintained in-between 26,7-32,2 °C (80-90 F) the 4<sup>th</sup> of September as per Alt-125 letter clause 1) requirement modifying ASTM E2515

| Time     | EPA                       | Surface              | Surface               | Surface                     | Surface                    | Surface                 |
|----------|---------------------------|----------------------|-----------------------|-----------------------------|----------------------------|-------------------------|
|          | Flue gas Temperature (°C) | temperature Top (°C) | temperature Rear (°C) | temperature Right side (°C) | temperature Left side (°C) | temperature Bottom (°C) |
| 11:34:00 | 23,4                      | 25,4                 | 24,5                  | 25,9                        | 25,3                       | 24,6                    |

Evidence of cold starting conditions on day three, the 4<sup>th</sup> of September 2020 to ASTM E2515 clause 9.8.1 (Ambient temp was 24,2 degr C at 10:05:55 hours)

Based on the evidence presented above, DTI declares test run #5 (Cold start and High fire 3 test) was determined to be as well appropriate as valid.

### 3.8. Duct traverse data the 4. September 2020

| Measuring points<br>ref. ASTM E2515<br>Fig 6 | Start | Intermed. | Center | Intermed. | Last   |            |
|--|-------|-----------|--------|-----------|--------|------------|
|  | 6,70% | 25%       | 50%    | 75%       | 93,30% | [relative] |
|  | 12,7  | 37,5      | 75,0   | 112,5     | 137,3  | [mm]       |
| First direction (X)                          | 22,3  | 25,1      | 29,8   | 29,3      | 19,9   | Pd [Pa]    |
| Angular direction (Y)                        | 18,7  | 20,8      | 30     | 29,4      | 18,9   | Pd [Pa]    |

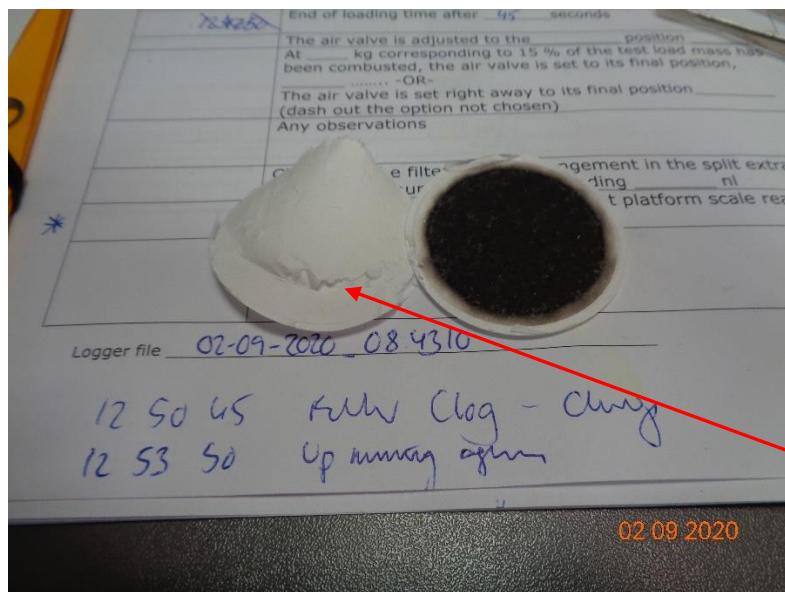

| Pitot tube dynamic pressure |         | Duct temperature |           |  | Pitot tube static pressure |         |  |
|-----------------------------|---------|------------------|-----------|--|----------------------------|---------|--|
| 28,8                        | Pd [Pa] | 27,4             | Temp [°C] |  | 44,9                       | Ps [Pa] |  |

Resulting pitot factor Fp: 0,92

### 3.9. Anomalies

In the first HF test, the 2<sup>nd</sup> of September (#1) the front filter in the main train took to clogging after an hours and ten minutes. It was not possible to maintain the target flowrate, so the PM sampling had to be aborted temporarily, while the pair of filters were changed.

Because of the high vacuum building up over the filter holder, the back-filter Teflon tissue was torn when the hose was removed.

It is quite peculiar why the filters take on to clogging as there was only 2,3 milligrams of particulate mass on the filter. This does not indicate very poor combustion quality for a High Fire test. However, we

observed that the particulate specimen was quite sticky, which is the closest we can get to an explanation why the filter clogged.

On earlier occasion where we have seen the Teflon-filters clogging, it also happened close to an hour into the test, either shortly before or shortly after changing of the filters in the split sampling train.

#### 4. High Fire net fuel consumption and burn rate calculations

|  | Mass (kg AF) | %-moisture                    | Ref basis | Dry mass (kg)/(lb) |
|--|--------------|-------------------------------|-----------|--------------------|
| HF1; 02-09-2020                                |              |                               |           |                    |
| Kindling                                       | 0,604        | 10                            | DB        | 0,549              |

\*) The LF burn rate is corrected from 0,62 kg dry/h as suggested by the CSA HF2 CO, HO & EFF calculation to the true burn rate of 0,61 (0,6145) kg dry/h from the ASTM calculation.  
 Similarly, the HF3 burn rate is corrected from 2,34 kg dry/h as suggested by the CSA HF1 CO, HO &EFF calculation to the true burn rate of 2,33 kg dry/h (2,326) from the ASTM calculation.

\*\*) please also find the arithmetic CO emi average in the Main results table, chapter 10

## 4.12. Test facility conditions

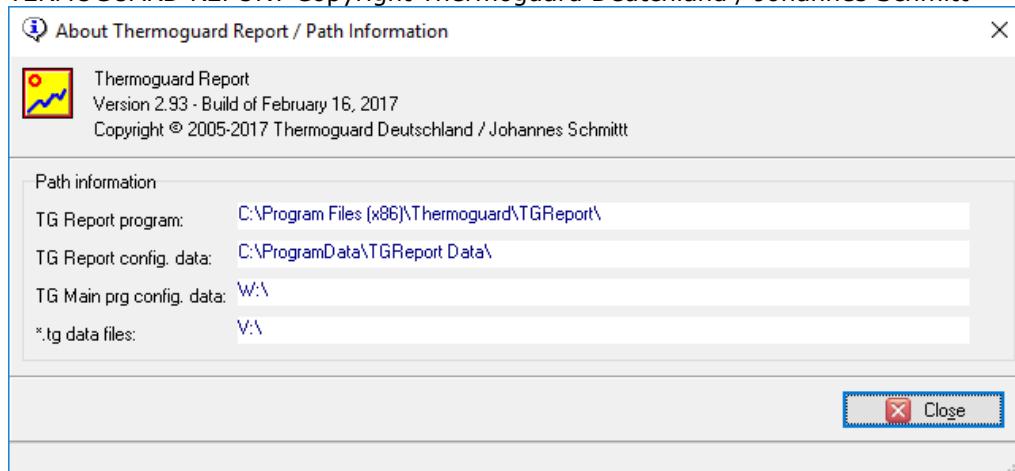

DTI is located at Kongsvangs Allé 29, DK-8000 Århus Denmark, at sea level.

Latitude North: 56,1374

Longitude East: 10,1864

Altitude above sea level: 15 meters

Test facility room temperature, relative humidity and barometric pressure is monitored by the software TERMOGUARD REPORT Copyright Thermoguard Deutchland / Johannes Schmitt

## 4.13. Fuel properties

The test fuel was natural Beech wood split and cut according to the manufacturer' written instructions and compliant with the provisions of ASTM E3053, clause 8.4

The specific gravity of 0,67 dry weight to dry volume ratio was taken from E3053 Fig 2 page 6. Similarly, the gross calorific value of 18800 MJ/kg or 8088 Btu/lb was selected from E3053 Annex A1, table A.1.1 page 17.

The length of the wood logs was 32-34 cm. The basic shape of the wood logs was approximated triangular, trapezoidal or rhombic respecting the minor to major ratio > 40% according to figures 1A and 1B of E3053

The composition of the HF and LF/MF fuel batches were calculated using the standard XLS Wood calculator adjunct to ASTM E3053

The nominal mass of the HF fuel load was 3,112 kg or 6,862 lb

The nominal HF mass range was 3,00-3,30 kg or 6,50-7,20 lb

The allowable mass range of the HF Core load was 1,40-2,00 kg or 3,10-4,50 lb

The allowable mass range of the HF Remainder load was 1,10-1,70 kg or 2,40-3,80 lb

The nominal mass of the LF/MF fuel load was 3,735 kg or 8,234 lb

The nominal LF/MF mass range was 3,548-3,922 kg or 7,822-8,646 lb

The allowable mass range of the LF/MF Core load was 1,681-2,428 kg or 3,705-5,352 lb

The allowable mass range of the LF/MF Remainder load was 1,301-2,054 kg or 2,882-4,529 lb

For the High fire test fuel loads, the mass was distributed on 4 logs, 3 core and 1 remainder

For the Low fire/Medium fire fuel loads, the mass was distributed on 5 logs, 3 core and 2 remainder

#### 4.14. Summary of test fuel load properties

|                   | Core 1 | Core 2 | Core 3 | Remainder 1 | Remainder 2 | Rem1/Rem2 ratio [%] |
|-------------------|--------|--------|--------|-------------|-------------|---------------------|
| HF1 mass (kg)     | 0,598  | 0,633  | 0,700  | 1,224       |             |                     |

| MF moist (%DB)    | 19,2   | 18,7   | 19,2   | 20,8        | 18,5        |                     |
| HF3 mas (kg)      | 0,671  | 0,654  | 0,634  | 1,224       |             |                     |
| HF3 moist. (% DB) | 18,9   | 19,8   | 18,9   | 19,2        |             |                     |

Please find the ASTM E3053 fuel load calculations enclosed in appendices 5-8

Total amount of firewood for the CS+HF+LF tests the 2-9-2020: (top left to bottom right)

- HF fuel load of 4 logs
- LF fuel load of 5 logs
- Kindling bits
- Start-up fuel

## 5. Test accomplishment

### 5.1. Remarks

The certification tests were accomplished in accordance with the manufacturers written test instruction for the lab (please find enclosed in annex 11), the ASTM E3035-17 Cordwood test standard, the EPA ALT125 letter and the ASTM E2515-11 dilution tunnel and sampling standard.

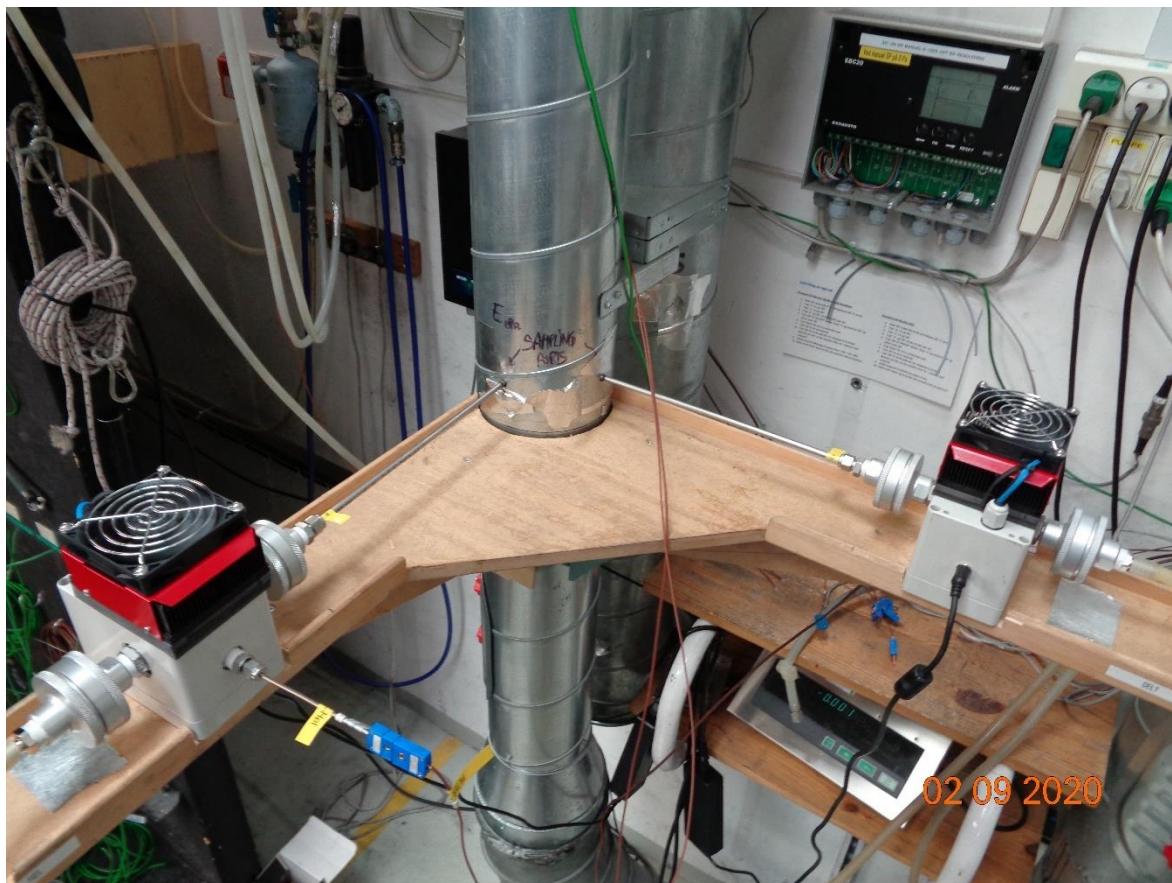

### 5.2. Start-up operation

The Morsø 2B Standard 2020 stove has a traditional air control system with a rotary type dial on the loading door to the front. For start-up operation, the air valve is kept fully open (3 and one quarter of a revolution), which position is maintained throughout the high fire tests. For the low fire test, after ignition the air valve is throttled to 3 quarters of a revolution open, and for the medium fire test, after ignition the air valve is throttled to 1 and one quarter of a revolution open.

Please find a detailed description of the start-up procedure in the manufacturers test instruction for testing procedure (annex 11)

### 5.3. Sampling arrangement

The PM specimen is extracted from the Ø150 mm Full Flow Dilution Tunnel by means of a dual probe and filter holder system as specified by ASTM E2515-11, clause 6.1.1.1. The filter holders are of type 47 mm Pall 1235. There are 3 sets of backed-up filter holders for PM sampling and one single filter holder for the room blanc measurement. The PM sampling line filter holder arrangements have thermostatic support to maintain the filter temperatures in between 26,7-32,2 degrees C, respectively 80-90 degrees F.

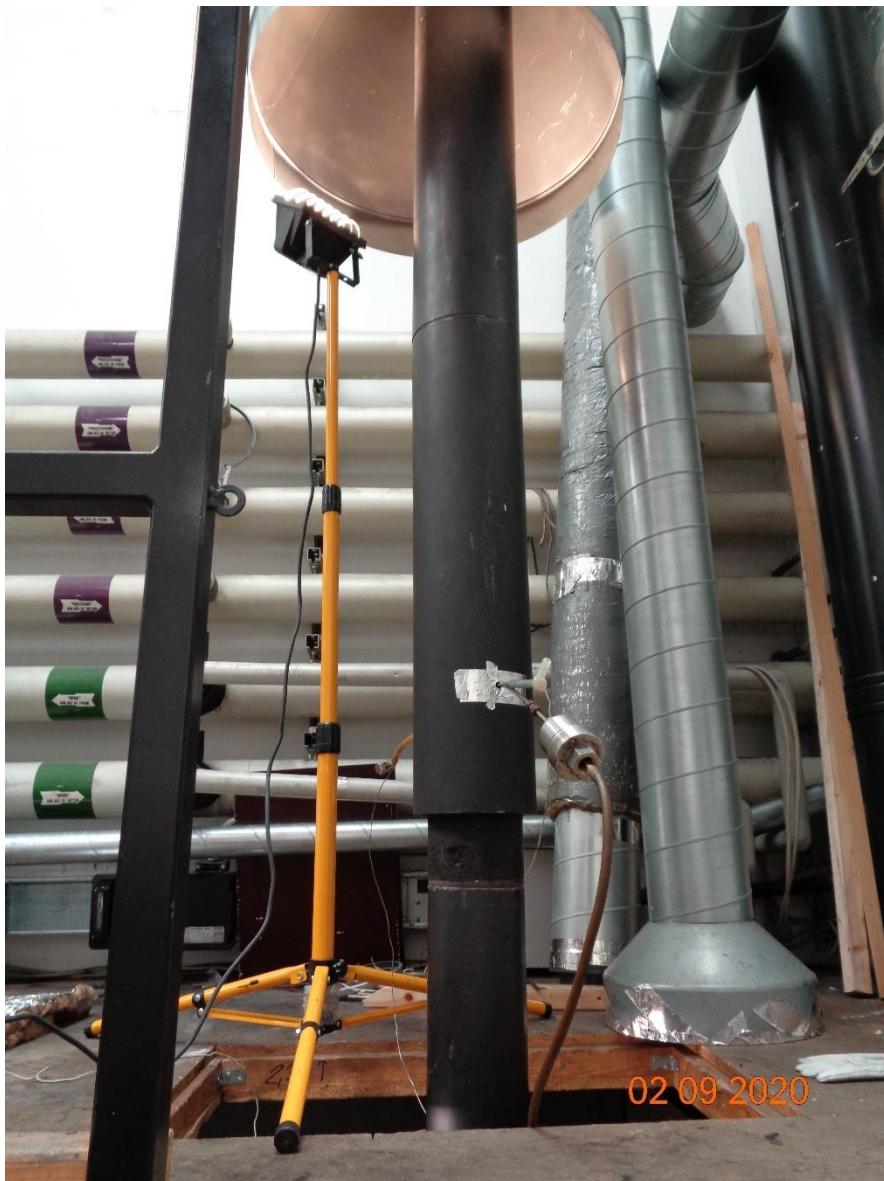

## 5.4. Fluepipe and chimney configuration

The chimney is composed by single wall uninsulated black painted steel fluepipe in combination with half insulated system steel chimney compliant with ASTM E3053-17 clause 6.3

The single wall fluepipe extends to 2,50 m above the test rig floor. In combination, the insulated system chimney extends to 4,40 m above the test rig floor, compliant with ASTM E3053-17 clause 8.2.3, stating  $2,6 \pm 0,1$  m for the uninsulated part of the flue and  $4,6 \pm 0,3$  m for the total height of the chimney.

Please find a schematic drawing of the chimney configuration in annex 13

The chimney was connected to the stove using the top flue outlet

## 6. Sampling methods

### 6.1. Particulate extraction system

The particulate matter is sampled in accordance with ASTM E2515-11. Two identical sampling trains are placed at angular position to each other. The sampling trains consists each of a set of front and back Pall type 1235 Al 47 mm in-line filter holders. Filter for PM sampling are Pall TX-40 EMFAB Teflon-coated 47 mm membrane filters.

The sampling train operated throughout the entire duration of the test is called the 'Main train'. The other sampling train, shifting filters at the hour is called the 'Split train'.

### 6.2. Calculation of PM emission

The calculations are enclosed in a format following the notation of equations in ASTM E2512-11

Please find the calculation of the first High Fire test (test run #1) in annex 16; the calculations of the Low Fire test (test run #2) in annex 17; the calculations of the second High Fire test (test run #3) in annex 18, the calculations of the Medium Fire test (test run #4) in annex 19 and the calculations of the third High fire test (test run #5) in annex 20

## 7. Quality assurance

### 7.1. Instrument calibration

There is a set of EPA instrument calibration certificates in annex 13

### 7.2. Logger data

Please find the sets of logger data, sampled every 5 seconds and recorded every 30 seconds in appendices 21 (HF1 test 020920), annex 22 (LF test 020920), annex 23 (HF2 test the 030920), annex 24 (MF test 030920) and in Annex 25 (HF3 test 040920)

For verification please request XLS logger files from DTI.

#### Legend:

| Rum - [°C]          | Filter-1-H - [°C]      | Filter-2-D1 - [°C]         |
|---------------------|------------------------|----------------------------|
| 1                   | 2                      | 3                          |
| Ambient temperature | Main train filter temp | Split train 1H filter temp |
|                     |                        |                            |
|                     |                        |                            |

Row 1 is the original Danish notation incl metric

Row 2 is the data logger channel number

Row 3 -5 are the corresponding terms in English

### 7.3. Morsø's Quality Assurance Plan

Quality Assurance Plan is a plan for assuring the quality for products, tested according to NSPS by taking measurements and checks of some key components and the action of the air controls, referred to as K-list components.

Please find the entire QA plan amended in annex 34.

## 8. Documentation material

Documentation material:

Assembly drawings in annex 26

Parts drawings in annex 27a

Spare parts drawing in annex 27b

Materials sheets in annex 28

Label(s) in annex 29

Picture(s) in annex 30

User's manual North America in annex 31a

User's manual Canada (in French language) in annex 31b

Sample analysis in annex 32

Firebox drawing incl volume indication in annex 33

Manufacturers QA plan in annex 34

Laboratory hand notes in annex 35

## 9. Remarks

### 9.1. Internal correction of gasmeters

The Vögtlin Red-Y gasmeters have internal correction to as well normal temperature (here 0-degree C) and to pressure (here 1013 hPa)

Consequently, in the calculations, the gasmeter temperature and pressure is entered as 0 degr C respectively 1013 hPa.

1013 Hectopascal (hPa) equals 14,69 psi or 10329,7 mm water column.

### 9.2. Unitary DTI Cribwood and Cordwood spreadsheet

The spreadsheet used for calculation of the emissions is a unitary Cribwood and Cordwood spreadsheet, in so far as the particle emission calculation is identical for Cribwood and Cordwood. When used for a Cordwood test there are some void spaces under the cribs and spacers calculations in the beginning. Also, generally the fuel is referred to as 'Cribs' even though for good reasons, for Cordwood, wood logs are used.

### 9.3. Request of restriction of the air valve action

The action of the air valve must be restricted by means of a physical stop as to prevent use of the stove at any valve setting lower than the one used during the Low Fire test, here 3 quarters of a revolution open.

### 9.4. Duplicated High fire calculations

As well for the ASTM calculations as for the CSA calculations we have performed double calculations. One which applies for the HF part alone, to return the burn rate and another for the combined CS + HF part tests, to return the particle emission. On each of the duplicate HF result sheet, the invalid result sections are blanked out with a red bar.

## 10. Discussion of Results

For some of the burn rate calculations, there is a minor still insignificant deviation from the (true) ASTM calculation to the CSA calculation.

For the Low fire test, the true burn rate is 0,6145 (rounded to 0,61) kg dry matter per hour. CSA suggests 0,62 kg dry matter per hour

For the HF3 test, the true burn rate is 2,3256 (rounded to 2,33) kg dry matter per hour. CSA suggests 2,34 kg dry matter per hour

The deviating results are attributed to different rounding and number of decimal places, metric conversion factors in combination with direct test run timekeeping for ASTM calculation, but derived or truncated test run timekeeping for the CSA calculation to the nearest sampling time in a 30 seconds interval.

## Annex 1

Title: Alt-125 Acceptance letter of cordwood testing

Pages total: 3, excl this cover page

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY**  
**RESEARCH TRIANGLE PARK, NC 27711**

FEB 28 2018

Mr. Justin White  
Hearthstone QHPP, Inc.  
#17 Stafford Ave.  
Morrisville, VT 05661

OFFICE OF  
AIR QUALITY PLANNING  
AND STANDARDS

Dear Mr. White,

I am writing in response to your letter dated January 12, 2018, regarding wood heaters manufactured by Hearthstone QHPP, Inc. (Hearthstone). This response, dated February 28, 2018, supercedes our previous response (dated February 26, 2018) to correct an inaccuracy regarding required changes to ASTM E3053-17.

You are requesting to use an alternative test method, using cord wood, as referenced in section 60.532(c) of 40 CFR part 60, Subpart AAA, Standards of Performance for New Residential Wood Heaters (Subpart AAA) to meet the 2020 cord wood alternative compliance option. The 2020 cord wood alternative compliance option states that each affected wood heater manufactured or sold at retail for use in the United States on or after May 15, 2020, must not discharge into the atmosphere any gases that contain particulate matter in excess of 2.5 g/hr. Compliance must be determined by a cord wood test method approved by the Administrator along with the procedures in 40 CFR 60.534. You have requested approval to use the procedures and specifications found in ASTM Method E3053-17, a cord wood test method titled, "Standard Test Method for Determining Particulate Matter Emissions from Wood Heaters using Cordwood Test Fuel," in conjunction with ASTM E2515-11 and Canadian Standards Administration (CSA) Method CSA-B415.1-10, which are specified in 40 CFR 60.534.

We understand that Hearthstone is also requesting that the alternative method proposed above be approved to apply broadly to all wood heaters manufactured by Hearthstone meeting the requirements of Subpart AAA, from the approval date of this request until such time that Subpart AAA is revised or replaced to require a different cord wood certification method, providing all requirements of section 60.533 of Subpart AAA are met.

With the caveats set forth below, we approve your alternative test method request for certifying wood heaters using ASTM E3053-17 in conjunction with section 60.534 of Subpart AAA to meet the 2020 cord wood compliance option until such time that Subpart AAA is revised or replaced to require a different cord wood certification method. We also approve application of this alternative method to all wood heaters manufactured by Hearthstone meeting the requirements of Subpart AAA.

As required in Subpart AAA, section 60.354(d), you or your approved test laboratory must also measure the first hour of particulate matter emissions for each test run using a separate filter in one of the two parallel sampling trains. These results must be reported separately and also included in the total particulate matter emissions per run. Also, as required by Subpart AAA, section 60.534(e), you must have your approved laboratory measure the efficiency, heat output, and carbon monoxide emissions of the tested wood heater using CSA-B415.1-10. For measurement of particulate matter emission concentrations, ASTM 2515-11 must be used.

The following change to ASTM E3053-17 must be followed:

1. Coal bed conditions prior to loading test fuel. The coal bed shall be a level plane without valleys or ridges for all test runs in the high, low, and medium burn rate categories.

The following changes to ASTM E2515-11 must be followed:

1. The filter temperature must be maintained between 80 and 90 degrees F during testing.
2. Filters must be weighed in pairs to reduce weighing error propagation; see ASTM 2515-11, Section 10.2.1 Analytical Procedure.
3. Sample filters must be Pall TX-40 or equivalent Teflon-coated glass fiber, and of 47 mm, 90 mm, 100 mm, or 110 mm in diameter.
4. Only one point is allowed outside the +/- 10 percent proportionality range per test run.

A copy of this letter must be included in each certification test report where this alternative test method is utilized.

It is reasonable that this alternative test method approval be broadly applicable to all wood heaters subject to the requirements of 40 CFR part 60, Subpart AAA. For this reason, we will post this letter as ALT-125 on our website at <http://www3.epa.gov/ttn/emc/approalt.html> for use by other interested parties. As noted earlier in this letter, this alternative method approval is valid until such time that Subpart AAA is revised or replaced to require a different cord wood certification method, and at such time, this alternative will be reconsidered and possibly withdrawn.

If you have additional questions regarding this approval, please contact Michael Toney of my staff at 919-541-5247 or [toney.mike@epa.gov](mailto:toney.mike@epa.gov).

Sincerely,

Steffan M. Johnson, Group Leader  
Measurement Technology Group

## Annex 3

Title: Sequence of images, course of testing the 2<sup>nd</sup> September 2020

Pages total: 3, excl this cover page

|   |  |
|---|--|
|    |    |
| 1) Aged 2B Classic 2020 on the test rig   | 2) Supply of natural Beech wood logs   |
|   |   |
| 3) Pre-selection of wood logs   | 4) Measurement of surface temp (5 in total)  |
|  |  |
| 5) Day 1 fuel loads prepared  | 6) Recording of HF fuel load moisture  |
|  |  |
| 7) Recording of LF fuel load moisture   | 8) Arrangement of kindling and SU fuel   |

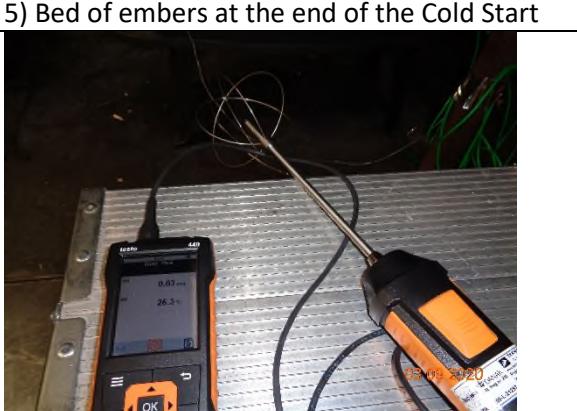

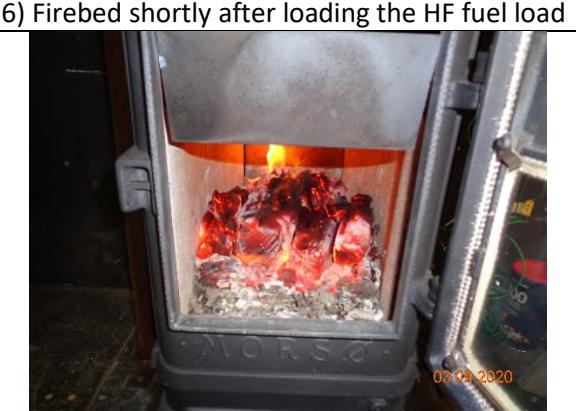

|  |  |
|--|--|
|   |      |
| 15) Temp controlled sampling lines   | 16) Intermediate air velocity measurement  |
|  |     |
| 17) Air velocity measurement at the end  | 18) Insulated part of the measurement section and the hood. No visible smoke detected. |
|  |  |
|  |  |

## Annex 4

Title: Sequence of images, course of testing the 3<sup>rd</sup> September 2020

Pages total: 2, excl this cover page

|   |  |
|---|--|
|    |    |
| 1) Preparation of wood logs   | 2) Kindling, start-up fuel and HF and MF loads                                       |
|   |   |
| 3) Arrangement of kindling and SU fuel  | 4) Air velocity measurement prior  |
|  |  |
| 5) Bed of embers at the end of the Cold Start                                       | 6) Firebed shortly after loading the HF fuel load                                    |
|  |  |
| 7) Intermediate air velocity measurement  | 8) Bed of embers at the end of the HF test   |

9) Air velocity measurement, end of the MF test

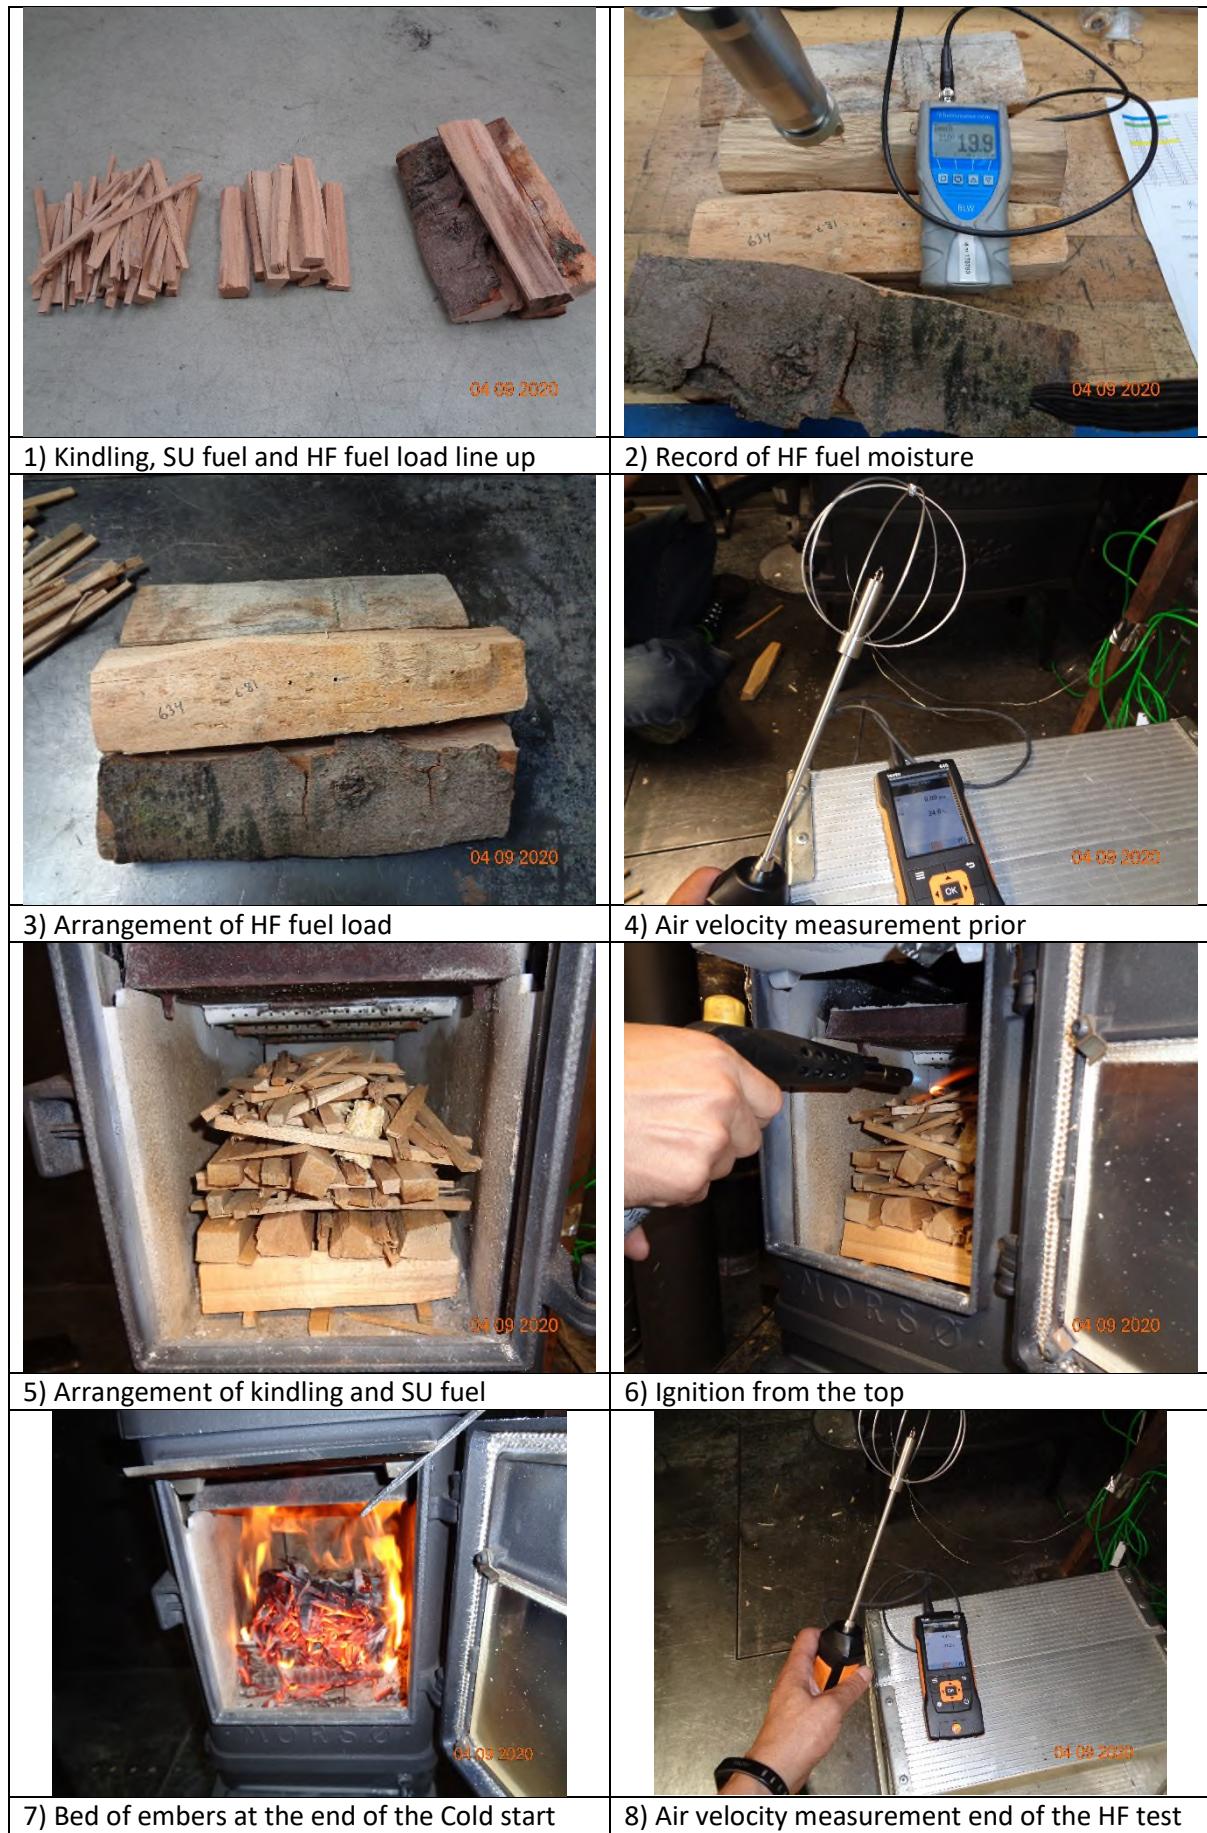

10) Platform scale, end mass of the MF test

## Annex 5

Title: Sequence of images, course of testing the 4<sup>th</sup> September 2020

Pages total: 2, excl this cover page

9) Preparation of seals

10) Sealed 2B Classic 2020 stove

## Annex 6

Title: HF1 Cordwood fuel load calculator (Imperial and metrics)

Pages total: 2, excl this cover page

Values to be input manually

| For All Usable Firebox Volumes - High Fire Test Only |  |  |  |                             |
|--|--|--|--|-----------------------------|
| Nominal Required Load Density (wet basis)            |  |  |  | 10,000 lb/ft <sup>3</sup>   |
| Usable Firebox Volume                                |  |  |  | 0,68616 ft <sup>3</sup>     |
| Total Nom. Load Wt. Target                           |  |  |  | 6,862 lb                    |
| Total Load Wt. Allowable Range                       |  |  |  | 6,500 to 7,200 lb           |
| Core Target Wt. Allowable Range                      |  |  |  | 3,100 to 4,500 lb           |
| Remainder Load Wt. Allowable Range                   |  |  |  | 2,400 to 3,800 lb           |
| Core Load Pct. Wt. Allowable Range                   |  |  |  | 1,000 to 1,700 lb           |

## Annex 9

Title: MF Cordwood fuel load calculator (Imperial and metrics)

Pages total: 2, excl this cover page

Imperial units

Values to be input manually

**For Usable Firebox Volumes up to 3.0 ft<sup>3</sup> - Low and Medium Fire**

Nominal Required Load Density (wet basis)

12,000 lb/ft<sup>3</sup>

Usable Firebox Volume

0,68618 ft<sup>3</sup>

Total Nom. Load Wt. Target

8,234 lb

Total Load Wt. Allowable Range

7,822 to 8,646 lb

Core Target Wt. Allowable Range

3,705 to 5,352 lb

Remainder Load Wt. Allowable Range

2,882 to 4,529 lb

Core Load Fuel Pct. Wt. Allowable Range

1,235 to 2,059 lb

Remainder Load Pct. Wt. Allowable Range

0,823 to 2,470 lb

Mid-Point

Core Load Piece Wt. Actual

# Manufacturers instruction for testing procedure

## according to ASTM E3053-17

### Morsø 2B Classic 2020 High Fire Procedure

#### Test Fuel:

Recommended test fuel species is beech.

The guidelines of the Cordwood standard E3053-17 are followed in regards of moisture content and weight ratios for kindling, startup, core and sub loads.

The nominal length for High Burn core and sub load is 12" (30 cm.)

The usable firebox volume is 0.686199 ft<sup>3</sup> (0,019431 m<sup>3</sup>)

#### Kindling and Startup:

The Start-up load is added to the kindling load. Ignited together in the same batch.

A "top-down" approach is used when igniting the fire.

The firebox is deep and narrow. To make things simple keep the length of kindling and start-up pieces just about the same length as the minimum width of the firebox.

Left to right:

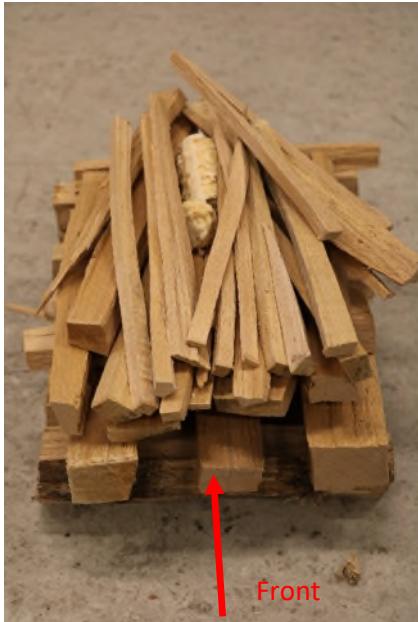

- Startup load. Consist of 6-8 pieces. Weight of each pieces varies from 100-150 grams. Diameter 3 cm to 5 cm.
- Kindling, medium size. Consist of pieces with a weight of 30-60 grams. Diameter 1 cm to 2 cm.
- Kindling, small size. Consist of pieces with a weight up to 20 grams. Diameter approximate 0.5 cm

Start-up load at the bottom, distributed in two layers. Each layer is perpendicular to each other. Next, on top of the startup load, the medium sized kindling is distributed in two to three layers. These layers are also perpendicular to each other. Finally, the smallest kindling pieces is placed loosely on top, all in the same direction, stove front to stove back.

On top of the wood, place one or two fire-starters. Re-arrange a couple of the top kindling pieces so they support the fire-starters on the sides. This will prevent the fire-starters from falling off and ease ignition of the wood.

Keep a ≈ 2" distance from the load to the baffle.

If there is too much wood in the stack to comply with this, then take the remaining kindling pieces and lay next to the main stack.

#### Load ignition

Set the air controller at maximum setting and fully open the stove door. Maximum setting is  $3\frac{1}{4}$  turns on the primary air control spinner

Build the start-up and kindling wood-stack as described. The wood-stack should be centered in the middle of the hearth.

Ignite one of the fire-starters with a gas torch.

Keep the door ajar and let the fire built up for up to 5 minutes before closing the door.

#### **High Fire loading and ignition:**

The charcoal bed for the High Fire should be around the midpoint of the allowable range. But keep an eye on the charcoal bed, do not wait too long, if the charcoal bed seems to burn out and getting too cold.

High Fire Load sample  
Nominal length 12"

High Fire Load sample  
Arrangement

The High Fire fuel load consist of four pieces. The preferred configuration of the load is a bottom layer of two pieces and second layer on top with two pieces. The load should be stacked compact without much air between each piece.

It is important that the fuel load height is kept below the path of the secondary air outlet stream (baffle plate)

Start the High Fire by fully open the stove door. Keep the air controller setting at maximum. If the burnt Kindling and Start-up wood-stack has not collapsed completely, even out the charcoal pieces with a poker. The bigger charcoal pieces should be poked to the front end of the hearth. Next load the fuel, keep a distance between fuel load and the back wall of the firebox of approximately 0.5"-1" (1.25 cm-2.5 cm).

The load should ignite rapidly

When the fire is steady close the door. This will take approximately 1 minute. Keep air controller fully open.

The High Fire should be stopped at the lower end of the allowable weight range.

## **Manufacturers instruction for testing procedure**

**according to ASTM E3053-17**

**Morsø 2B Classic Medium and Low Fire Procedure**

### **Test Fuel:**

Recommended test fuel species is beech.

The guidelines of the Cordwood standard E3053-17 are followed in regards of moisture content and weight ratios for kindling, startup, core and sub loads.

The nominal length for High Burn core and sub load is 12" (30 cm.)

The usable firebox volume is 0.686199 ft<sup>3</sup> (0,019431 m<sup>3</sup>)

### **Low and Medium Fire loading and ignition:**

The Low and Medium Fire test is much like the High Fire, regarding both test procedure and load arrangement.

The Low/Medium Fire fuel load consist of five pieces. The preferred configuration of the load is a bottom layer of three pieces and second layer on top with two pieces. The load should be stacked compact without much air between each piece.

It is important that the fuel load height is kept below the path of the secondary air outlet stream (baffle plate)

Start the Low/Medium Fire by fully open the stove door. Keep the air controller setting at maximum. Even out the charcoal pieces on the hearth with a poker. Next load the fuel, keep a distance between fuel load and the back wall of the firebox of approximately 0.5"-1" (1.25 cm-2.5 cm).

The load should ignite rapidly.

When the fire is steady close the door. This will take approximately 1-3 minute.

Adjust and set the primary air controller at latest, half a minute before the allowable timeframe closes. The Low Fire setting is  $\frac{3}{4}$  turn on the air controller valve. Medium Fire setting is  $1\frac{1}{4}$  turn on the air controller valve.

Low and Medium Fire Test Run Completion-The test run is completed when the scale indicates the remaining weight of the test fuel load is 0.0 lb. (0.00 kg) or less for 30 s OR if at least 90 % of the test fuel load weight has been consumed and there is no measurable weight loss ( <0.1 lb (0.05 kg) or 1.0 % of the test fuel load weight, whichever is greater) for at least 30 min.

## Annex 12

Title: Manufacturers description of the wood heater

Pages total: 1, excl this cover page

## WOOD HEATER INFORMATION

**Appliance Manufacturer:** Morsø Jernstøberi A/S

**Wood Stove Model:** 2B Classic 2020

**Type:** Freestanding, radiant-type wood fired room heater.

## WOOD HEATER DESCRIPTION

**Materials of Construction:** The unit is constructed primarily of cast iron with a stainless-steel secondary combustion air supplying baffle. The firebox is lined with molded vermiculite firebricks. The feed door has a 145 mm by 158 mm glass panel and one 870 mm by 8 mm glass fiber gasket. The ash door is sealed with one 570 mm by 8 mm glass fiber gasket.

**Air Introduction System:** Air enters the firebox through a spin-draft located at the front of the appliance at the top of the fuel-loading door. Secondary air enters the appliance through the upper back and supplies a three-step, tiered hollow baffle.

**Combustion Control Mechanisms:** The combustion air inlet is controlled by a spin draft on the fuel-loading door.

**Combustor:** N/A.

**Internal Baffles:** A stainless steel baffle with a ceramic blanket is mounted in the upper portion of the firebox. The flame path is forced to the front of the firebox where it travels up through the opening between the baffle and primary air manifold.

**Other Features:** N/ A.

**Flue Outlet:** The 6" diameter flue outlet is located at the top of the unit.

## **1 FORMÅL**

Formålet med prøvningsproceduren er at afprøve brændeovne i henhold til metode til bestemmelse af partikelemission, med Crib- og Cordwood, der kan opnå godkendelse hos EPA i USA.

## **2 GYLDIGHEDSMRÅDE**

Afprøvningen omfatter lukkede brændeovne og indsats til fyring med træ, og begrænset til en maksimal ydelse på 50 kW.

## **3 ANSVARSFORHOLD**

Den laboratorieansvarlige er ansvarlig for procedurens vedligeholdelse.

De opgaveansvarlige er ansvarlige for dokumentets anvendelse på opgaver inden for området.

Sektionsleder og Centerchefen har det overordnede ansvar for området.

## **4 Procedure for partikelmåling til EPA godkendelse**

### **4.1 Indledning**

Proceduren er baseret på kravene i The Rule, 'Standards of Performance for New Residential Wood Heaters' US EPA 40 CFR Part 60 som offentliggjort i the Federal Register mandag den 16. marts 2015  
The Rule henviser i subpart AAA, §60.534 til test standarderne:

- ASTM E2515-11 (Sampling og analysemetoder, herunder brug af fortyndingstunnel)
- ASTM E2780-10 med undtagelser defineret af Metode 28R (Fyring og drift)
- US EPA Metode 28R (korrigendum til standarden ASTM E2780-10)
- US EPA Metode 28, udvalge elementer som specificeret af Metode 28R (Fyring og drift, samt vægtet middelværdi emissionsberegninger)
- ASTM E3053-17 Bestemmelse af PM emission ved brug af Cordwood (dvs. brændetræ)
- CSA B415.1-10 (måling af CO emission og bestemmelse af virkningsgrad og varmeydelse afsnittene 13.7-13.10).
  - Standard regneark tilhørende CSA B415.1-10

**EPA procedure partikelmåling (ELAB-PP-BR-15)**

Procedurer CAL/INSP/TEST - Brændeovne

Side 3 af 26

Der henvises i øvrigt til punkt 6, Referencer.

**4.1.1 Definitioner**

- Cribwood; Prøvekloden er sammensat af 'Cribs', dvs savskåret Douglas træ på fast mål
- Cordwood; Prøvebrændsel i form af naturlige brændekævler fra udvalgte løvtræssorter

Se øvrige definitioner i de enkelte standarder.

**4.1.2 Prøveudtagning, emne**

I forbindelse med afprøvning efter denne procedure findes der ingen specielle retningslinjer for prøveudtagning af emnet. Fabrikanten/Importøren forestår selv udvælgelsen af prøveemnet.

**4.1.3 Prøvningsmetode**

- Prøvningen foretages som anført i denne procedure. Se detaljer under punkt 4.7 og 4.9.
- Brug af fortyndingstunnel er primært baseret på ASTM E2515-11. Se punkt 4.7.
- Ved prøvning med Cribwood er betjening af ovnen er primært baseret på ASTM E2780-10 med modifikationer efter EPA metode 28R. Se punkt 4.9.
- Ved prøvning med Cordwood er fyringsmønster og betjening af ovnen baseret på standarden ASTM E3053-17 (Standard Test Method for Determining Particulate Matter Emissions from Wood Heaters Using Cordwood Test Fuel)

**4.1.4 Fortyndingstunnel**

Partikelprøve udtages i en fortyndingstunnel som beskrevet i standarden ASTM E2515-11, 6.1.6. med tillæg af indbyggede plader til tvangsblanding af røggassen i miksesectionen, i overensstemmelse med standarden CSA B415.1-10, 6.4.6

Fortyndingstunnellen mäter indvendig diameter  $\varnothing 150 \text{ mm} \pm 2 \text{ mm}$  i prøveudtagningssektionen. Hvis det er mere hensigtsmæssigt kan kanal diametern øges til  $\varnothing 200\text{mm}$ .

**4.1.5 Princip**

Prøvningsmetoden afprøver ovnen med hensyn til partikelemission ved forskellige ydelsesområder. Partiklerne udtages i fortyndingstunnel. Ovnen opstilles på en platformsvægt således at afbrændingen og grundglødelaget kan registreres.

Der bestemmes en partikelkoncentration i fortyndingstunnelen, og ud fra denne samt ud fra flowet i fortyndingstunnelen bestemmes en samlet partikelemission angivet i gram/time [g/h]. Samtidig med PM målingen bestemmes virkningsgrad, varmeydelse og emission af CO efter metoderne i standarden CSA415.1-10, afsnittene 13.7 – 13.10

**4.1.6 Prøvningsudstyr, stand C (EPA setup)**

#### 4.1.7 Underleverandører

Der bruges kun underleverandører til kalibreringer.

### 4.2 Opsætning af fortyndingstunnel og samplingslinje

Proceduren er primært baseret på standarden ASTM E2515-11 'Standard Test Method for Determination of Particulate Matter Emissions Collected by a Dilution Tunnel'

#### 4.2.1 Hastighed i fortyndingstunnel

Forud for test skal der bestemmes hastighed i fortyndingstunnel indenfor intervallet 4-10 m/s (Normalt maksimalt 7 m/s). Hastigheden måles med L-formet pitotrør i center af kanal, og registreres på datalogger. Hastigheden skal afpasses således at der under ingen omstændigheder slipper røggas ud ved siden af hætten. Se 4.2.3.

#### 4.2.2 Bestemmelse af pitotfaktor

Forud for hver prøve skal der bestemmes pitotfaktor  $F_p$ , som er udtryk for forskellig flow profil på tværs af kanalen.

Pitotfaktoren bestemmes som forholdet imellem hastighed for travers i forhold til hastigheden i center, dvs. forholdet imellem middelværdien for de lokale flow, målt med TSI Micromanometer samt L-formet pitotrør (id nr. 4771, mærket 270-A-2406) i 8 punkter i samme plan, og det med pitotrør kontinuert målte flow i kanalens centrum. Fordelingen af de 8 forskellige enkeltmålinger, hvor der traverseres, fremgår af figur 6 på side 7 i E2515-11.  $F_p$ , der er en værdi på ca. 0,90 bestemmes ud fra disse målinger.

Placering af pitotrør og traversmålinger skal opfylde angivelser i E2515-11 figur 3 side 4.

#### 4.2.3 Kontrol af suge kapacitet

Efter at have indstillet fortyndingstunnellen, kontrolleres det visuelt at suge kapaciteten er tilstrækkelig til at al røgen der opstår, når ovnen fyres med rigeligt med pindebrænde og spjældet er indstillet til maksimal ydelse, kan bortfjernes. Kontrollen udføres både med lågen lukket og åben. NB Hætten skal have en åbning på mindst 4x kanal diameter.

#### 4.2.4 Læk test af samplingslinje

Samplingslinjen skal læk testes forud for fortesten og igen efter afslutningen af en prøve. Strækningen fra sonden til pumpen, hvor der er undertryk, testes ved at blokere sondeåbningen.

Den maksimalt tilladte lækage er 0,3 l/minut eller 4% af middel udsugningshastigheden.

Der skal her opnås et vakuuム der er mindre end det der opnås ved prøven, eller -0,5 Bar.

Strækningen fra pumpen til og med gasmåleren, hvor der kunne være overtryk, testes i forbindelse med den halvårlige kalibreringsrunde. Se E2515-11 pkt. 9.6.1.

#### 4.2.5 Læk test af pitotrør med forbindelse

Ved første ibrugtagning og ved den halvårlige kalibreringsrunde kontrolleres pitotrøret og dets forbindelsesslanger for lækage.

Pitotrøret udtages og kontrolleres med tilhørende forbindelsesslanger ved at blokere åbningerne i pitotrøret og påføre et tryk på minimum 745 Pa, trykket skal holdes konstant i minimum 15 sekunder. Dette gøres for både Ps (Det statiske tryk i hullerne i siden) og Pt (Det totale tryk i spidsen).

Forbindelsen til pitotrøret bør læk testes forud for fortesten og skal læk testes efter afslutningen af en prøve. Se E2515-11 pkt. 9.6.4.2 og 9.6.5.2.

Ved den daglige kontrol af pitotrørets forbindelsesslanger efterses slanger for begyndende revnedannelse. Begges slanger fjernes fra trykmåler og blæses med trykluft for at fjerne begyndende tilstopning.

#### 4.2.6 Partikelmåling

Forud for hver prøvning skal der konditioneres og afvejes 4 stk. udsugningsrør incl. 4 stk. forreste filterhus part og 2x3+1 pakninger (O-Ringe) Samt 7 stk. Ø47 glasfiber planfiltre. (3 sæt sonder og et stk. sonde til måling af baggrundsluft)

Konditioneringen foregår således:

- Filtre, forreste part af første filterhus, alle pakninger (O-Ringe) og udsugningsrør konditioneres ved 20 +- 5,6 grader i eksikator i minimum 24 timer.
- Filtre og pakninger (O-ringe) vejes parvis, forreste part af første filterhus incl. udsugningsrør vejes enkeltvis.
- Vejningen skal gøres på under 2 minutter i laboratoriemiljøet.
- Der vejes med minimum 0,1mg opløsning på vægt.
- Vægten kontrolleres med 50-150% af vægten på et filter. Hvis fejlen er mere end ±0,1mg skal vægten kontrolleres sporbart i 5 punkter, indenfor det anvendte måle område, før brug.

Der skal måles partikler således:

- Et sæt bestående af 2 stk. Ø47mm filtre i serie skal måle over hele prøveperioden
- Et sæt bestående af 2 stk. Ø47mm filtre i serie skal måle over den første time i prøveperioden.
- Et sæt bestående af 2 stk. Ø47mm filtre i serie skal måle efter 1 times prøvning og resten af prøveperioden.
- Et enkelt filter Ø47mm skal måle baggrundsluft i laboratoriet over hele prøveperioden.

I samplingslinjerne i forlængelse af de 3 førstnævnte sæt filtre, skal røggasen udtørres og afkøles til maksimalt 27,5 °C, før den ledes ind i en gasmåler. Afkølingen sker ved at lede gassen igennem glaskølere som er kølet ned til <5°C. I det sidste filter til baggrundsluftens måles der flow udelukkende ved brug af flowmeter sammenholdt med udsugningstiden.

Der skal udsuges maksimalt 7 liter/min (0,42 m<sup>3</sup>/h) på hver af filterserierne.

Udsugningshastigheden i samplingslinjerne, udtrykt i m/s, skal ligge indenfor 10%'s variation af kanalhastigheden, ligeledes udtrykt i m/s.

Proberne placeres i samme plan, indenfor en imaginær cirkel af diameter 50 mm omkring centerlinjen, 90 grader forskudt i forhold til hinanden og med mindst 25 mm horizontal afstand mellem de to rør mundinger. Der skal måles på 2 sæt filtre hele tiden hvor det ene sæt skiftes efter 1 time hvis prøveperioden overstiger 1 time. Omgivelses målingen skal foretages maksimalt 3,1m fra hætten hvor fortyndingsluften suges ind i fortyndingstunnellen.

Efter prøven konditioneres udsugningsrør og planfiltre igen helt som før prøvningerne, og den udsugede partikelmasse bestemmes.

#### 4.2.7 Rengøring af fortyndingstunnel mm

Fortyndingstunnellen rengøres før hver test.

Pitotrør renseres før hver test.

Proberør renseres før hver test ved brug af sæbevand og herefter blæses med trykluft. Hvis proberør har været utsat for meget støv vil disse også blive renset med acetone. Efter rensning konditioneres og vejes proberør som foreskrevet.

### 4.3 Klargøring til prøve

#### 4.3.1 Klargøring af ovnen generelt

Der skal måles lækage på kold ovn. Herunder skal alle spjældgreb sættes i position 'lukket'. Hvis der er tilsigtede åbninger der ikke lukkes via spjæld, lukkes disse også og lækagen måles igen.

Lækagen, måles ved at påføre et overtryk på 25 Pa i ovnen med lukket spjæld og evt. andre tilsigtede luftindtag også lukket. Der måles hvilket flow der skal til for at opretholde dette tryk i ovnen, og flowet bør her ikke overstige ca. 5 m<sup>3</sup>/h eller anden værdi specificeret af fabrikanten.

Ovnen vejes.

Bestem brændkammerets effektive volumen som produktet af længde x bredde x højde. Som højde regnes så langt op som brændsel kan placeres, når der tages hensyn til røgvenderplade, luftkanaler eller andre permanente forhindringer.

Som længde regnes den største af brændkammerets vandrette dimensioner, der er parallel med en væg. Som bredde regnes den mindste af brændkammerets vandrette dimensioner, der er parallel med en væg. Såfremt brændkammerets isoleringsmateriale dækker mere end 1/3 af brændkammerets sider, er det tilladt at måle længde/bredde som afstanden mellem de modstående isoleringsplader. Hvis der findes et permanent kævlefang, er det tilladt ikke at medregne det rum der ligger udenfor kævlefangen. Kævlefangen må dog maksimalt have en udstrækning på 1/5 af den totale dimension i samme plan.

Ved bestemmelse af bundarealet regnes hele bundarealet med. Hvis røgvenderpladen gaber mere end 10 cm til nogen af brændkammeret vægge, skal volumenet over røgvenderpladen, indtil en højde af 10 cm over indfyringsåbningens overkant, regnes med til det effektive brændkammer volumen.

Ovnen forberedes for montering af termoelementer midt på hver af de 5 ydersider af brændkammeret; Begge sider, top, bund og bagside. Fremføring af termoelementer må ikke påvirke betjening af låge eller spjældgreb og eventuel askeskuffe, bypass greb eller andre betjeningsgreb. Vær opmærksom på eventuelle indbyggede luftkanaler og juster eventuel følerplacering.

En ny ovn skal brændes ind i tilstrækkelig tid, inden prøven. Ovnen skal have brændt i 50 timer ved middel belastning forud for prøven, men ikke nødvendigvis i træk.

Ældning af ovnen skal kunne dokumenteres, eksempelvis ved hjælp af kurveforløb over røgtemperatur som funktion af tid eller kurveforløb over brændkammerets overfladetemperaturer som funktion af tid.

#### 4.3.2 Klargøring af ovnen, særligt for Cordwood

Det er tilladt fabrikanten at specifcere områder i brændkammeret, hvor der ikke må placeres brændsel (ref. E3053-17, clause 8.3). Kontroller derfor vejledningen, for at se om fabrikanten har angivet en 'max load limit' eller på anden måde undtaget bestemte områder hvor brænde ikke må placeres, og beregn det effektive brændkammer volumen i overensstemmelse hermed

#### 4.3.3 Klargøring af prøvebrændsel Cribwood

Til prøve og til forfyring skal der benyttes Douglas gran opskåret som bygningstømmer. Tømmeret skal have en densitet på 401-578 kg/m<sup>3</sup> som tør basis og fugtindhold 16-20% på våd basis, svarende til 19-25% på tør basis.

Note: Det anbefales i almindelighed at vælge træ med forholdsvis høj densitet, for at begrænse prøveklodsens volumen mest muligt. Dog kan træ med lavere densitet have lettere ved at fænge. Overvej evt at sammensætte prøvekloden af træ af forskellig densitet, så det lette træ findes placeret der hvor træet skal antændes.

## EPA procedure partikelmåling (ELAB-PP-BR-15)

Procedurer CAL/INSP/TEST - Brændeovne

Side 8 af 26

Der benyttes bygningstømmer på nominelt mål 2"x4" og 4"x4".

Aktuel mål for 2"x4" skal være 38x89 mm  $\pm$  1,5 mm.

Aktuel mål for 4"x4" skal være 89x89 mm  $\pm$  1,5 mm.

Der skal desuden bruges afstandskloder af mål 130x40x20 mm  $\pm$  1,5 mm.

Brænslet skal være konditioneret indenfor temperaturintervallet 18-32 grader Celcius.

Brænslets fugtighed måles med en elektronisk fugtmåler. Der måles på mindst 3 forskellige sider, stifterne bankes i til ca. 19 mm dybde, og det resulterende fugtindhold beregnes som middelværdien af de udførte målinger. Fugtindhold skal oplyses i nærmeste heltal.

Prøvekloden skal påfyres senest 4 timer efter at fugtigheden i træet er blevet målt.

Temperaturen i brænderummet noteres som prøveklodsenes temperatur.

Til brændkamre med et effektivt volumen på under 43 liter benyttes udelukkende 38x89 mm tømmer.

Til brændkamre med et effektivt volumen på 43-85 liter benyttes en kombination af 38x89 og 89x89 mm tømmer.

Til brændkamre med et volumen på over 85 liter benyttes udelukkende 89x89 mm tømmer.

Prøveklodsenes masse beregnes som  $112 \pm 11,2 \text{ kg/m}^3$  (100,8-123,2 kg/m<sup>3</sup>) effektiv brændkammer volumen, som våd basis.

Prøveklodsenes sammensættes som vist i figur 1 i standarden ASTM E2780-10, idet der for enden af hvert stykke tømmer, både på forsiden og på bagsiden, påsømmes afstandskloder, således 4 i alt pr stykke tømmer.

Prøvekloden skal mindst kunne dække 5/6 af brændkammerets længste dimension af længde. Længde er i den forbindelse den længste af brændkammerets vandrette dimensioner.

Ved kontrol af prøveklodsenes densitet indenfor  $401-578 \text{ kg/m}^3$  på tør basis, indgår alene selv brændestykkerne i beregningen. Men ved beregning af prøveklodsenes vægt på våd basis, indgår også afstandskloder men ikke søm.

### 4.3.4 Klargøring af prøvebrændsel, Cordwood

Der fyres med kløvet brænde med grundliggende trekantet tværsnitsfacon (ref E3053-17 Fig 1, side 6) og tilvirket af bøg, birk, ask, ahorn, eg, elm eller anden sort (ref E3053-17 Fig 2, side 6), og som specifiseret af fabrikanten i vejledningen.

Længden af brændestykkerne skal være som angivet i vejledningen, dog indenfor 300-600 mm.

Samme træsort benyttes til både pindebrænde, forfyring og prøvebrændsel.

Til High Fire prøven beregnes brændemængden ud fra densitetskrav på  $161 \text{ kg/m}^3$  (dry)

Til Medium Fire og Low Fire prøverne beregnes brændemængden ud fra densitetskrav på  $194 \text{ kg/m}^3$  (dry)

For det enkelt brændestykke skal fugtindholdet ligge på 18-28% tør basis, tilsv. 15-21,3% våd basis. For den samlede brændemængde, skal middelfugtindholdet være på 19-25% tør basis, tilsv. 15,6-19,4% våd basis. Der foretages 3 målinger af hvert brændestykke, hvortil det er tilladt af forbore hullerne til sømmene, dog fraregnet de sidste 6-10 mm.

Pindebrænde der er opbevaret ved rumtemperatur og ved en relativ luftfugtighed på  $50\pm10\%$  i mindst 2 døgn formodes at have et fugtindhold på 10% (dry basis)

Når brændet har været opbevaret minimum 24 timer i brænderummet forud for bestemmelse af fugtindhold, sættes brændets temperatur lig med rumtemperaturen.

Brændestykkerne til prøven vælges eller tildannes, så de har et forhold mellem dimensionerne 'Minor' og 'Major' (ref E3053-17 Fig 1 side 6), således at Minor målet er på mindst 40% af Major målet.

Det er tilladt at opdele prøvebrændet i to sub-loads der må påfyres successivt.

#### 4.3.5 Klargøring af prøvestanden

Vægten nulstilles inden ovnen placeres på platformsvægten.

Efter at ovnen er opsat på vægten, men inden skorsten og følere forbindes, tjekkes vægtens kalibrering ved at belaste vægten yderligere med et kalibreret lod, der vejer 20-80% af prøveklodsens masse.

Vægten skal kunne gengive loddets masse indenfor enten 5 grams nøjagtighed, eller 1% af prøveklodsens masse, hvad nu der er størst.

Efter at skorsten, termoelementer og måleudstyr er blevet monteret, tareres vægten af kold ovn incl skorsten mm. Vægten skal senere bruges til bestemmelse af grundglødelag forud for prøvens start.

Kanal strømningshastigheden indstilles til en værdi på nominelt 6,0 m/s (4-10 m/s, Normalt maksimalt 7 m/s), hvilket svarer til ca. 381 Nm<sup>3</sup>/time, i en Ø150mm kanal. Der er mulighed for at øge kanal diametern til Ø200mm hvis dette i enkelte tilfælde kan være mere hensigtsmæssigt. Røgtrækket målt i skorstenen her på kold ovn må maksimalt være 1,25 Pa.

Udsugningssystemet, opbygges som udgangspunkt med et proberør med en udvendig diameter på Ø6,35 mm og en godstykke på 0,89mm. Flowet i udsugningssonden indstilles også til en nominel værdi på 6,0 m/s hvilket svarer til ca. 0,35 m<sup>3</sup>/time (5,9 l/min). Der suges med ca. samme hastighed i proben som der er i kanalen. Der er mulighed for at øge flowet op til 7 l/min. i sonden, og kanal flowet øges tilsvarende.

Før og efter hver prøve skal udsugningslinjen kontrolleres for lækage. Se 4.2.4

Efter hver prøve skal forbindelsen til pitotrøret samt forbindelse kontrolleres for lækage, Se 4.2.5

Rumluft filterhus klargøres til prøve.

#### 4.3.6 Valg af skorsten

Medmindre andet er specificeret af fabrikanten, skal der bruges en skorsten der er sammensat af et isoleret stålør indtil en højde af  $2,40 \text{ m} \pm 0,10 \text{ m}$  over gulvet (heri indgår ovnens højde). Ovenpå det

Side 10 af 26

uisolerede stålør fortsætter en isoleret sektion (25 mm isolering = halvisoleret skorsten) til en samlet højde af 4,60 m  $\pm$  0,30 m over gulvet.

Måling af røgtemperatur skal foretages i en højde af  $2,60 \pm 0,15$  m over gulvet, dvs nominelt 0,20 m oppe i den isolerede del af skorstenen. Røggasser til bestemmelse af CO og CO<sub>2</sub> skal udtages 0,05 m ovenover det sted hvor røgtemperaturen måles.

Røgtræk måles i en højde af 0,30 m over røgstudsens diameter.

Samme type skorsten bruges til både fritstående ovne og til indsats.

Skorstenens diameter skal modsvare røgstudsens diameter, dvs brug af adaptor skal ikke finde sted.

Hvis det udtrykkeligt kræves i fabrikantens vejledning, må der benyttes en skorsten der er isoleret i hele sin udstrækning (zero clearance oven).

Hvis der bruges andet end en standard skorsten, skal den anvendte skorsten efter prøven er ovre forsegles og opbevares sammen med den ligeledes forseglede ovn.

#### **4.4 Fyringsmønster samt betjening af ovnen, Cribwood**

Proceduren for fyring med Cribwood er primært baseret på standarden ASTM E2780-10, med ændringer specifiseret i Metode 28 R der henviser til visse bestemmelser fra US EPA Metode 28

##### **4.4.1 Optænding og forfyring**

Arranger bålet i ovnen og optænd som angivet i fabrikantens vejledningen. Ud over pindebrænde og tændmateriale, er det til forfyringen tilladt at bruge mindre stykker af træ, dog ikke mindre end 1/3 af de stykker der indgår i prøvekloden. Det er tilladt at toppe op med ekstra brændsel, undervejs i prøvefyringen.

Prøvefyringen bruges til at finde den spjældindstilling der skal benyttes for at opnå den ønskede forbrændingshastighed. Mindst en time forud for prøvens start skal spjældet være sat i den omtrentlige stilling, der skal benyttes under prøven.

I tiden frem til et kvarter inden prøvens start, er det tilladt at foretage mindre justeringer af:

1. Spjældindstilling
2. Tilføre ekstra brændsel
3. Fjerne brændsel eller trækul
4. Slå næsten forbrændte brændestykker itu for at sikre ensartet forbrænding af træet
5. Få bålet til at falde sammen
6. Udjævne eller arrangere gløder og trækul

Noter alle justeringer der gøres incl tidspunktet.

I tidsrummet 0-15 minutter inden prøvens start, er det kun tilladt at udjævne eller arrangere gløder og trækul. I den forbindelse må lågen ikke være åben mere end 1 minut sammenlagt.

Overgangen for afslutning af forfyringen til start af prøven må ske, når brænslet er nedbrændt til kun at udgøre 20-25% af prøveklodsenes masse.

Grundglødelaget defineres som den øjeblikkelige vægt at varm ovn incl skorsten mm, gløder og trækul, minus tara vægten af den kolde ovn incl skorsten mm.

Noter det valgte grundglødelag.

#### 4.4.2 Prøveperioden

Prøveperioden begynder når forfyringen er afsluttet som beskrevet ovenfor. Gasmålere aflæses, sonderne placeres i kanalen, vægten af grundglødelaget registreres, pumpen startes og der noters starttidspunktet.

Brændeckloderne skal være påfyret senest 1 minut efter starttidspunktet, men i praksis altid hurtigst muligt, åbnes lågen og brændeckloderne arrangeres som indstuderet. Brændslet skal placeres således at afstandskloderne ligger parallelt med ovnens bund, dvs tømmer stykkerne enten liggende på den flade side, eller stående på højkant, og med tilstødende ender af afstandskloderne. Vær opmærksom på om gløder eller træ forhindre pilot- og tertiar huller i at skyde luften ud som ønsket.

Når brændeckloderne er påfyret noteres tiden (Maksimalt 1 minut fra starttidspunktet). Det er her tilladt at holde lågen på klem og bruge spjældene til at få forbrændingen ordentlig i gang indtil 5 minutter efter starttidspunktet. Når de 5 minutter er gået skal døren være lukket og spjældet sat i den blivende position.

Noter alle justeringer der foretages i løbet af de første 5 minutter.

Efter de 5 minutter er gået, er det ikke tilladt at ændre spjældindstilling eller omplacere brændet, dog med følgende to undtagelser:

1. Det er tilladt at omplacere brændslet, én gang, hvis mere end 60% af prøveklodsenes masse er blevet omsat, og massen i løbet af 10 minutter ikke er aftaget med mere end 50 gram, eller 1% af den oprindelige masse, hvad nu der er højest. Lågen må højst være åben i 15 sekunder, i forbindelse med omplaceringen.
2. Hvis ovnen har regulering af den tertiar luftforsyning, må den, under nærmere beskrevne vilkår, justeres én gang i løbet af prøveperioden, i overensstemmelse med fabrikantens betjeningsvejledning. Justeringen må dog ikke resultere i en ændring af afbrændingshastigheden på mere end 25%. Se afsnit 8.10 i Metode 28, for fuldstændig beskrivelse af krav til, og forudsætninger for at justering af tertiar luftforsyning kan benyttes.

Hvis ovnen er forsynet med en konvektionsluft blæser, skal blæseren benyttes i henhold til fabrikantens brugsvejledning, eller i fravær af instruktion, stilles blæseren til høj ydelse.

Eventuel rysterist og bypass spjæld må betjenes én gang i løbet af prøven, i henhold til fabrikantens brugsvejledning.

Hvis prøven strækker sig over mere end en time, skiftes det det ene filterarrangement på timen, gasmåler aflæses og der fortsættes med nyt filterarrangement resten af tiden. Det andet filterarrangement benyttes gennemgående over hele prøven.

Prøveperioden afsluttes når al det påfyrede prøvebrændsel er blevet omsat og vægten viser samme grundglødelag som ved starttidspunktet, hvorefter:

1. Rumluft filter flowmeter aflæses
2. Pumpene standses
3. Gasmlære aflæses
4. Filter arrangement udtages af fortyndingstunellen
5. Der udføres læk test af samplings linjen
6. Sonde og forreste filterhus afrensese for støv og partikelmasse.
7. Filterarrangement overføres straks til vejerum og klargøres til konditionering i eksicator skab.

Side 12 af 26

8. Kontroller at ovnen har været i termisk ligevægt. Der må maksimalt være 70 graders forskel på middel overfladetemperaturen fra start til slut.
9. Kontroller at total emissionen afviger maksimalt 7,5% fra middelværdien eller forskellen på de 2 målinger er maksimalt 0,5 g/kg (Tør). Hvis bare en af disse 2 forhold er opfyldt kan prøven accepteres.

**4.4.3 Flere prøver i rækkefølge**

Der er tilladt at køre flere prøver i rækkefølge, men der skal være et ophold af mindst en times varighed mellem hver prøve.

Forud for ny prøve rages gløder og aske ud, og der tændes op med ny optænding og forfyring som beskrevet under 4.4.1

**4.4.4 Ekstra prøver**

Det er tilladt at køre flere prøver på samme belastningstrin. Hvis en prøve er mislykket, skal der køres to andre som er vellykkede. Resultaterne fra 2/3 af de køрte prøver skal indgå i beregning af den vægtede gennemsnitlige emission. Alle prøver, uanset udfaldet skal dokumenteres og indgå i rapporten.

**4.4.5 Belastningsområder**

Ovnen skal testes ved 4 belastningsområder

- BR1 som er <0,80 kg tørstof i timen
- BR2 som er 0,80 – 1,25 kg tørstof i timen
- BR3 som er 1,25 – 1,90 kg tørstof i timen
- BR4 som er Maksimal ydelse

BR4 prøven skal køres med forbrændingsluft forsyningen 100% åben, hvilket omfatter både skylleluft og bundluft.

Såfremt ovnen ikke kan klare at brænde i BR1, skal der køres en ekstra prøve i BR2. En af de to BR2 prøver skal dog ligge på under 1,00 kg tørstof afbrændt i timen.

Såfremt ovnen ved spjældet 100% åben ikke klarer at komme op i BR4, duplikeres prøvningsresultaterne ved max ydelse op i den eller de højere belastningsområder.

Som bevis på at ovnen ikke kan klare at brænde i BR1, skal der foreligge mindst to dokumenterede forsøg, hvor ovnen enten er gået ud eller hvor afbraendingshastigheden var over 0,80 kg tørstof i timen, til trods for at spjældet stod i den lavest mulige indstilling.

Ovnen anses for værende gået ud, når der er forløbet mindst 30 minutter og vægten maksimalt har ændret sig med 50 gram eller 1% af prøveklodsens masse, hvad end der nu er størst.

**4.5 Fyringsmønster samt betjening af ovnen, Cordwood**

Der fyres efter et særligt fyringsmønster (burn rates) til Cordwood prøven, bestående af High Fire, Low Fire og Medium Fire. Til High Fire prøven skal spjældet stå i stilling 100% åben, dvs max output. Til Low Fire prøven skal spjældet stå i lavest mulige stilling, dvs min output. (der må gerne være en 'stop' ligesom til DEFRA prøven, hvorved spjældets vandring begrænses nedadtil) Til Medium Fire prøven skal spjældet stå i en stilling på maksimalt halvvejs mellem max og min setting. Se videre detaljer om krav til Medium Fire spjældindstilling i E3053-17, clause 8.8

**4.5.1 Optænding og forfyring**

Side 13 af 26

Overgangen for forfyring til prøveperiode defineres ved et glødelag på 10-20% af prøvebrændets samlede masse på våd basis. Brug billed- eller video til at dokumentere glødelagets tilstand, ved overgangen fra forfyring til prøveperiode. Vægten af glødelaget registreres eller vægten tareres inden prøvens start. Hvis påfyingen er langstrakt og der underforbruges gløder/masse, gælder den initiale registrering som startvægt.

High Fire prøven startes fra kold ovn, dvs optænding og brændsel til forfyring lægges i på én gang. Prøvebrænslet påfyres når man er nede på et grundglødelag (residential start-up fuel bed) på 10-20% af prøvebrændets samlede masse på våd basis, i overensstemmelse med E3053-17 clause 8.5.8

Medium Fire prøven er en varm-til-varm prøve, der kan udføres i forlængelse af High Fire prøven eller tilsvarende forfyring. Se endvidere E3053-17, clause 8.6

Low Fire prøven er en varm-til-varm prøve, der kan udføres i forlængelse af High Fire prøven eller tilsvarende forfyring. Se endvidere E3053-17, clause 8.6

#### **4.5.2 Prøveperiode**

Det er tilladt at opdele prøvebrænslets i to sub-batches der påfyres succesivt. Den tid det må vare, indtil hele mængden er påfyret, beregnes som funktion af det effektive brændkammer volumen således; 1060 sekunder per kubikmeter. (Eksempel; En brændeovn har et effektivt brændkammer volumen på 0,33 m<sup>3</sup>. Så bliver tiden  $1060/0,33 = 3180$  sekunder, svarende 53 minutter indtil det sidste af prøvebrænslets skal være påfyret)

Ved start af prøveperioden startes pumpen inden der tændes op.

I overensstemmelse med fabrikantens vejledning, er det tilladt at holde lågen på klem under optænding for at sikre god antænding af pindebrænde og forfyring.

Det er tilladt at åbne lågen på klem i op til 5 min efter udløbet af den maksimale påfyringsperiode og herunder om arrangere brændet, for at sikre en god antændelse af prøvebrændet.

Derefter er det tilladt at ompositionere brændt én gang i indtil 15 minutter efter udløbet af den maksimale påfyringsperiode (ref E3053-17, clause 8.5.9.5 stk 1)) I den forbindelse må lågen højst være åben i 30 sekunder, og der skal tages billeddokumentation før og efter. Billederne sammen med en skriftlig begrundelse skal indgå i rapporten.

Hvis ilden er ved at gå ud efter at 60% af brændemassen er fortærret, her defineret som der afbrændes mindre en 50 gram på 10 minutter, er det tilladt at åbne lågen og rage op i brændet. Tag før&efter billeder og tage dem med i rapporten.

Andre spjæld en forbrændingsluftspjældet må betjenes én gang på et vilkårligt tidspunkt i prøven, som beskrevet i vejledningen. Eventuelle automatisk styrede spjæld skal have lov at arbejde som de gør.

Prøven afsluttes og pumpen standses, når 90% af det påfyrede prøvebrændsel er blevet fortærret

Ved Low Fire og Medium Fire prøver der ikke udføres i forlængelse af en High Fire prøve, skal der opbygges et glødelag tilsvarende i overensstemmelse med High Fire proceduren i E3053-17, clause 8.5.2 – 8.5.9.8. Det er i den forbindelse tilladt at justere spjældet og udjævne glødelaget inden starten af Low Fire eller Medium Fire prøven, i overensstemmelse med fabrikantens angivelser i vejledningen.

I sjældne tilfælde er der ikke plads til at al træet kan placeres i fyrboksen. Hvis alt har været forsøgt, er det tilladt at undlade påfyring af det sidste stykke brænde, i overensstemmelse med E3053-17, clause 8.6.3.1. Dokumentation og begrundelse skal medtages i rapporten. Registrer vægten af det udeladte brændestykke og gennberegn load densiteten som benyttet under prøven.

Spjældet må bruges i op til 15 minutter efter påfyring.

Fabrikanten skal anvise brændets placering (orientering) i fyrboksen

Hvis mindre end 90% af brædemængden er blevet fortæret når for brændingen går i stå, her defineret som en forbrug på under 50 gram eller 1% iløbet af 30 minutter, betegnes prøven som ugyldig.

Low Fire prøven køres ved spjældet i den laveste indstilling og ovnen skal bræ ned i mindst 8 timer eller have en burn rate på mindre end eller lig med 1,15 kg/h (dry matter). Hvis 8 timers kriteriet vælges, må burn rate ikke overstige 1,5 kg/h (dry matter)

Medium Fire prøven skal køres ved en spjældindstilling på maksimalt halvdelen af vandingen mellem min og max setting, målt ud fra spjælgrebet. Hvis den derved opnåede burn rate er højere end medianen mellem min og max output, skal spjældet sættes yderligere ned, indtil kravet om max 50% er overholdt.

#### **4.5.3 Ekstra prøver**

Det er tilladt at køre flere prøver på samme belastningstrin. Hvis en prøve er mislykket, skal der køres to andre som er vellykkede. Resultaterne fra 2/3 af de køрte prøver skal indgå i beregning af den vægtede gennemsnitlige emission. Alle prøver, uanset udfaldet skal dokumenteres og indgå i rapporten.

#### **4.6 Samtidig bestemmelse af Virkningsgrad, varmeydelse og emission af CO**

Under EPA emissionsprøven, er det tilladt samtidigt at bestemme ovnens virkningsgrad, varmeydelse og emission af CO. Det skal ske efter standarden CSA B415.1-10 'Performance testing of 'Solid-fuel-burning heating appliances', afsnittene 13.7-13.10

Udtagning af røggasser skal ske 50 mm ovenfor det sted i den isolerede del af skorstenen, hvor der måles røgtemperatur.

Beregning af virkningsgrad, varmeydelse og emission af CO skal ske i det regneark, der følger med standarden CSA B415.1-10. Der beregnes kun på værdier en gang pr minut.

#### **4.7 Afrapportering**

Se forslaget til rapport disposition i Metode 28, afsnit 12.6

For Cordwood prøver skal rapporten endvidere indeholde et 'Test Summary' indeholdende nøgleoplysninger og billeder. Til formålet benyttes en Excel template der er udleveret ved køb af standarden.

Side 15 af 26

#### **4.8 Registrering af måledata**

Flere steder kræves det at måledata skrives ned hvert 10 minut. Idet DTI benytter løbende periodisk dataopsamling, registreres alle data hver 30. sekund. Der beregnes 10 minutters værdier som middelværdi af data indenfor den pågældende 10 minutters periode. Det omfatter udsuget volumen (dog ikke rumluft blanc filter), kanal temperatur, kanal hastighed og gasmåler temperaturer. Se endvidere pkt 4.6 ifbm beregning af virkningsgrad, CO og varmeydelse.

### **5 Beregninger**

#### **5.1 Beregninger for Cribwood**

Beregning af den vægtede middelemission for Cribwood med indtil 4 burn rates udføres i overensstemmelse med standarden E2780-10, clause 10.

#### **5.2 Beregninger for Cordwood**

Beregninger af emissioner fra de tre output niveauer, og beregning af vægtet middelemission udføres i overensstemmelse med standarden E3053-17, clause 9

#### **5.3 Beregning for fortyndingstunnel (fælles)**

Beregning af flow, udsuget volumen og balance mellem de to sampling trains sker i overensstemmelse med standarden E2515-11.

### **6 Usikkerhed**

Usikkerhed beregnes for hver enkelt prøvning lig angivelser i ASTM E2515-11 Bilag X1.

#### **6.1 Præcision og bias**

Både standarden for Cribwood (E2780-10) og standarden for Cordwood (E3053-17) anfører i clause 11.1 at det ikke er muligt at opgøre præcisionen ved en prøve af PM emission, fordi såvel betjening, fyringsmetode og ovnen selv giver anledning til varierende emissioner. Af den årsag kan test resultatet ikke benyttes til at fastsætte metodens reproducerbarhed (mellem afprøvningsinstitutter) eller repeterbarhed (gentagne prøver indenfor samme institut)

Både standarden for Cribwood (E2780-10) og standarden for Cordwood (E3053-17) anfører i clause 11.2, at der ikke kan oplyses noget om metodernes bias, da der ikke findes noget referencemateriale.

|               | $V_{sl}$         | dm <sup>3</sup>      | Volume of gas sampled as measured by dry gas meter during each 10-min interval, l, of the test run                    |
|               | $T_s$            | K                    | Absolute average gas temperature in the dilution tunnel   |
|               | $T_{ml}$         | K                    | Absolute average dry gas meter temperature during each 10-min interval, l, of the test run                            |
|               | $PR$             | -                    | Proportional Rate Variation - Calculated PR for each 10-min interval, l, of the test run                              |

## Annex 15

Title: Calibration certificates

Pages total: 78, excl this cover page

**Rekvisionsnr.:** MXB

**Periode:** Modtaget: 09-09-2019 Kalibreret: **10-09-2019**

**Procedure:** D1-7.1 & D1-7.3

**Bemærkninger:**

**Vilkår:** Kalibreringen er udført akkrediteret i henhold til gældende vilkår fastlagt af DANAK, jf. [www.danak.dk](http://www.danak.dk), og i henhold til Teknologisk Instituts almindelige vilkår, som er gældende på tidspunktet for aftaleindgåelsen. Kalibreringsresultater gælder udelukkende for det kalibrerede emne. Kalibreringscertifikatet må kun gengives i uddrag, hvis laboratoriet skriftligt har godkendt uddraget.

**Kalibreret af:** Javier I. Camacho, 72 20 25 92, jcam@teknologisk.dk

(\*) Thermocouple Test med ekstern cold junction v. 0 °C - elektromotorisk kraft defineret i DS/EN 60584-1:2014

Bemærkninger:

Aflæsning er middelværdien af flere aflæsninger på det kalibrerede måleinstrument.

Fejl = Aflæsning - referenceværdi.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

Kalibreringsforhold:

Rumtemperatur:  $23 \text{ }^{\circ}\text{C} \pm 1 \text{ }^{\circ}\text{C}$

Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

# KALIBRERINGSCERTIFIKAT

CERTIFIKATNR.:

**200-T-23175**

Side 1 af 3  
Antal bilag: 0  
Init:  
BJNI/SOAN

**Rekvirent:** Teknologisk Institut  
Kongsvang Allé 29  
8000 Århus C

**Emne:** **Temperatur-kalibrator, digital**  
Fabrikat: Ametek Denmark A/S Model: 601  
Serienr.: **912525** Kundemærke: **270-A-1625**  
Område: 50 - 600 °C Inddeling: 1 °C  
Type: Tørblok kalibrator

**Revisionsnr.:** MXB

**Periode:** Modtaget: 10-09-2020 Kalibreret: **11-09-2020**

**Procedure:** D1-5.1

**Bemærkninger:** Kalibreret i området 30 - 350°C. Aksial inhomogenitet, hysterese samt temperaturinstabilitet er undersøgt iht. EURAMET cg-13 Version 3.0 (02/2015).  
Kalibreringen er foretaget med en referenceføler på 6,5 mm og et foret isoleringsrør med en diameter på 32 mm og en højde på ca. 200 mm. Isoleringsrøret er placeret omkring referenceføleren oven på tørblokken. Indsats (uden id.) med én central udboring er benyttet under kalibringen. Mellem tørblokken og isoleringsrøret er der isoleret med mineraluld

**Vilkår:** Kalibreringen er udført akkrediteret i henhold til internationale krav (ISO/IEC 17025:2005) og i henhold til Teknologisk Instituts almindelige vilkår. Kalibreringsresultater gælder udelukkende for det kalibrerede emne. Kalibreringscertifikatet må kun gengives i uddrag, hvis Teknologisk Institut skriftligt har godkendt uddraget.

**Kalibreret af:** Bjørn Kjærsgaard Nielsen, 72203534, bjni@teknologisk.dk

Godkendt og  
digitalt signeret  
**17-09-2020 af:**

Søren Andersen

Søren Lindholt Andersen  
Konsulent, Ph.d.

## TEKNOLOGISK INSTITUT

Certifikat nr.: 200-T-23175

Side 3 af 3

### KALIBRERINGSCERTIFIKAT

#### Fejlkurve

Kalibrator mærket: 270-A-1625

**Kun de markerede punkter er målt.**

#### Bemærkninger:

Aflæsning er middelværdien af flere aflæsninger på det kalibrerede måleinstrument.  
Fejl = Aflæsning - referenceværdi.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

Alle temperaturer er i henhold til ITS90

#### Kalibreringsforhold:

Rumtemperatur:  $22,5 \text{ }^{\circ}\text{C} \pm 1,1 \text{ }^{\circ}\text{C}$   
Relativ fugtighed:  $49,8 \% \text{rh} \pm 8,1 \% \text{rh}$   
Barometerstand:  $1013,5 \text{ mbar} \pm 4,2 \text{ mbar}$

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

## KALIBRERINGSERTIFIKAT

### CERTIFIKATNR:

**200-A-162-1530**

Side 1 af 2

Antal bilag: 0

**Rekvirent:** **Teknologisk Institut**  
Kongsvang Allé 29,  
8000 Aarhus  
Att.: Max Bjerum

**Emne:** Type: Digital Vægt      Kundemærke: 7084  
Fabrikat: Mettler Toledo      Måleområde: 0-220 g  
Model: XS 204      Serienr.: B042079566

Modtaget dato: 03-09-2020

Kalibreringsdato: 03-09-2020

**Testmetode:** Auto D1-10.1

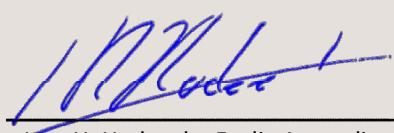

**Kalibreringssted:** Teknologisk Institut, Kongsvang Allé 29 - 8000 Aarhus

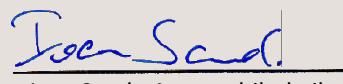

**Sporbarhed:** Dette kalibreringscertifikat er omfattet af DANAks akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

**Bemærkninger:** Resultatet af kalibreringen fremgår af de efterfølgende sider

**Vilkår:** Kalibreringen er udført i henhold til gældende vilkår fastlagt af DANAk, jf. [www.danak.dk](http://www.danak.dk), og i henhold til Teknologisk Instituts almindelige vilkår, som er gældende på tidspunktet for aftaleindgåelsen. Kalibreringsresultater gælder udelukkende for det kalibrerede emne. Kalibreringscertifikatet må kun gengives i uddrag, hvis laboratoriet skriftligt har godkendt dette.

**Udført af:**

  
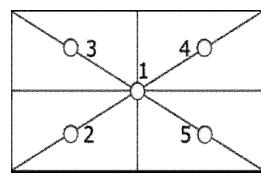

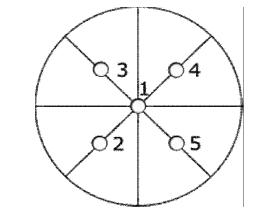

Lars H. Hudecek - Faglig Ansvarlig

  
Ivan Sand - Automobilteknik

**Måleresultater:****Ekcentrisk belastning**

| Position      | Deling | 1<br>[g] | 2<br>[g] | 3<br>[g] | 4<br>[g] | 5<br>[g] |

| 220,0006           | 0,0001 | 219,9998  | 219,9998  |  |  | 219,9998  | -0,0008  | 0,0022                   | 2,00                |

Den rapporterede eksplanderede usikkerhed er angivet som standardusikkerheden multipliceret med dækningsfaktoren k, som for en t-fordeling, med det relevante antal frihedsgrader, giver en dækningssandsynlighed på ca. 95%

**Omgivelser:**

#### LABORATORIEBETINGELSER OG SPORBARHED

##### **Laboratoriebetingelser:**

|                             |            |
|-----------------------------|------------|
| Rumtemperatur (°C) :        | 22,8 ± 0,6 |
| Relativ luftfugtighed (%) : | 57 ± 10    |
| Barometerstand (mbar) :     | 1023,4 ± 1 |

##### **Referencer:**

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

##### **Usikkerhed:**

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden multipliceret med dækningsfaktoren  $k = 2$ , som for en normalfordeling svarer til en dækningssandsynlighed på ca. 95%. Standardusikkerheden er fastlagt i overensstemmelse med EA-04/2.

TRYKLABORATORIET  
TEKNOLOGISK INSTITUT

Certifikat nr.: 200-P-24979

Side 4 af 4

KALIBRERINGSCERTIFIKAT  
Fejlkurve

**Bemærkninger:**

Alle værdier under 'Op' og 'Ned' er afrundede middelværdier af 10 målinger (rådata). Værdierne under 'Fejl' er ligeledes afrundede middelværdier af samme rådata (evt. 2 gange, dvs. 20 eller 40 målinger). Der kan derfor forekomme uoverensstemmelse mellem måleresultater og fejl, da alle tal afrundes til 2 betydende cifre, jf. EA4/02.  
Fejl = aflæsningsværdi - referenceværdi.

Den beregnede standardusikkerhed inkluderer relevante korttidsbidrag samt den halve hysterese fra det kalibrerede emne.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

**Kalibreringsforhold:**

|                    |  |
|--------------------|--|
| Prøvemedium:       | Luft   |
| Rumtemperatur:     | $20,3 \text{ } ^\circ\text{C} \pm 0,4 \text{ } ^\circ\text{C}$ |
| Relativ fugtighed: | $62,7 \text{ \%rh} \pm 6,6 \text{ \%rh}$                       |
| Barometerstand:    | $1005,3 \text{ mbar} \pm 2,0 \text{ mbar}$                     |

**Sporbarhed:**

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

KALIBRERINGSCERTIFIKAT  
Fejlkurve

**Kun de markerede punkter er målt.**

**Bemærkninger:**

Fejl = aflæsning middel - referenceværdi.

Den beregnede standardusikkerhed inkluderer relevante korttidsbidrag samt den halve hysterese fra det kalibrerede emne.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

**Kalibreringsforhold:**

|                    |  |
|--------------------|--|
| Prøvemedium:       | Luft   |
| Rumtemperatur:     | $20,8 \text{ }^{\circ}\text{C} \pm 0,3 \text{ }^{\circ}\text{C}$ |
| Relativ fugtighed: | $44,5 \text{ \%rh} \pm 4,2 \text{ \%rh}$                         |
| Barometerstand:    | $1029,3 \text{ mbar} \pm 2,0 \text{ mbar}$                       |

**Sporbarhed:**

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

# Kalibreringscertifikat

Task nr.: 120-31006  
Certifikat nr.: 9.8-22637  
Side: 1 af 3

**OBJEKT:**

Prøveemne: Masseflowmåler  
Fabrikat: Vögtlin  
Id nr.: Hel  
Serie nr.: 198703 144236 Hel  
Størrelse: 10 nl/min N2

**REKVIRENT:**

Teknologisk Institut  
Kongsvang Allé 29  
8000 Århus C  
Att.: Torben Nørgaard Jensen

**SKALA / SKALAINDELING:** 0 - 10 nl/min // 0,1 nl/min

**PRØVNINGSBETINGELSER:**

Prøvningsmetode/medie: Gennemstrømning med nitrogen.  
Middelbarometerstand: 1010 mbar  
Omgivelsestemperatur: 20 ± 1 °C

**PRØVNINGSOMFANG:**

Kalibrering ved : 2,5; 5,0; 7,5 og 10 nl/min  
Resultater opgives i nl/min  
(1 nl/min = 1 l/min ved 0 °C, og 1013,25 mbar.)

**KALIBRERING iht.:**

FORCE instruktion nr. 60.2.02.

**KALIBRERINGSATO:**

2020-09-08

**KALIBRERINGSRESULTAT:**

Resultater, se side 2.

**SPORBARHED:**

Prøveanlæg: FORCE nr.: C02-006 Se side 3.

**BEMÆRKNINGER:**

Teknisk vurdering: Ingen bemærkninger.

**UDSTEDELSESDATO:** 2020-09-08

"Ucmc" er 0,17% af "Sandt flow".

"Vist flow" er middelværdi af visninger aflæst i målerens display. Antallet af aflæsninger var 10-14.

I "Standardusikkerhed" er et bidrag fra standardafvigelsen knyttet til "Vist flow" samt et bidrag fra aflæsningernes afrundingsfejl. Standardafvigelsen var nul i alle flowpunkter.

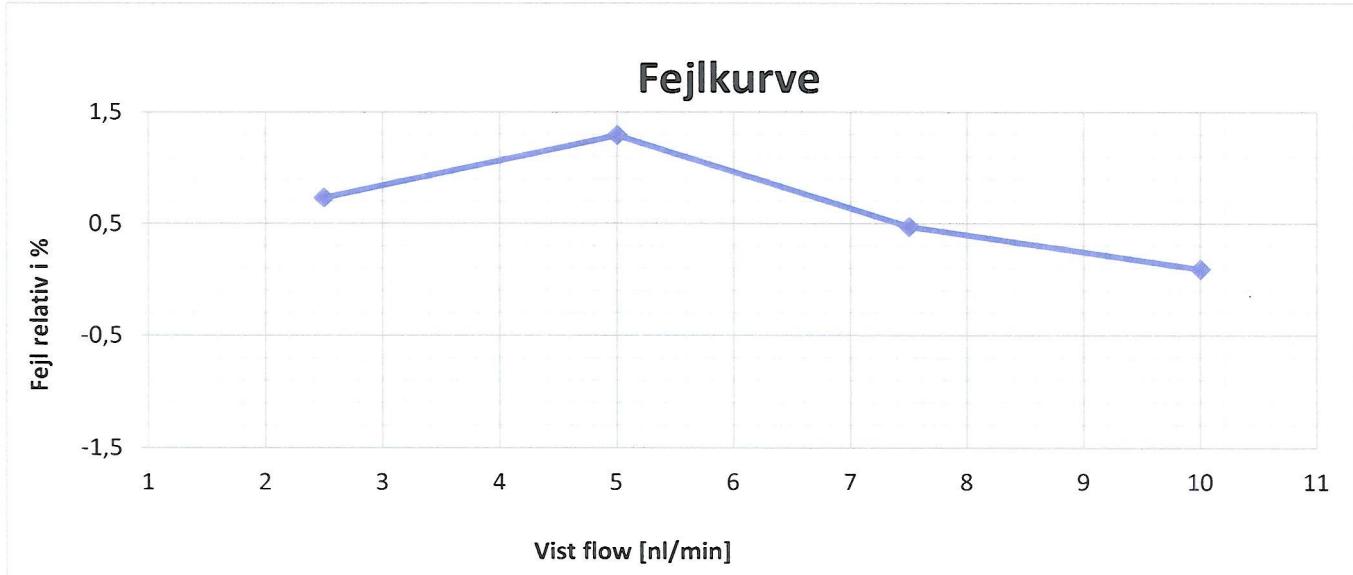

"Fejl relativ" blev beregnet med formlen: ("Vist flow" - "Sandt flow")/"Sandt flow"×100.

Summen af bidrag i måleusikkerhed fra måleevnen "Ucmc" og fra standardafvigelsen knyttet til "Vist flow" divideret med bidraget fra afrundingsfejlen i aflæsningerne er 0,3 eller mindre. Det viser at "Fejl Relativ" er omrent firkantfordelt. Dækningsfaktoren er derfor 1,65.

"Ekspanderet usikkerhed" blev beregnet med formlen:

$$\frac{k}{\text{"Sandt flow"}} \times \sqrt{\left(\frac{\text{"Ucmc"}^2}{2}\right)^2 + \text{"Standardusikkerhed"}^2} \times 100$$

"Temperatur" og "Tryk" blev målt efter måler.

Task nr.: 120-31006  
Certifikat nr.: 9.8-22637  
Side: 3 af 3

## LABORATORIETS KONTROLUDSTYR

De med x mærkede arbejdsnormaler er anvendt til kalibreringen.

**Arbejdsnormaler:**      **FORCE nr:**      **Sporbarhed:**

**Anlæg: FORCE nr. C02-006.**

|                            |         |         |
|----------------------------|---------|---------|
| Small tube 1-750 ml/min    | A00-070 | Trescal |
| Medium tube 1-10000 ml/min | A00-069 | Trescal |
| x Big tube 1-50000 ml/min  | A00-068 | Trescal |

**Øvrigt udstyr:**

|                    |        |                                 |
|--------------------|--------|---------------------------------|
| x Temperaturmålere | A70xxx | kalibreres i.h.t. instruktioner |
| x Trykmålere       | A80xxx | kalibreres i.h.t. instruktioner |

**Laboratoriets måleevne:**

I beregningen af måleevnen Ucmc er medtaget alle betydende bidrag bortset fra målerens standardafvigelse og afrundingsfejl, som medtages i beregningen af den rapporterede ekspanderede usikkerhed.

**Måleevnen Ucmc er:**       $\pm 0,17\%$  relativ.

**Ekspanderet usikkerhed:**

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren k, således at dækningssandsynlighed svarer til ca. 95 %.

Side 4 af 4

### KALIBRERINGSCERTIFIKAT

#### Fejlkurve

Føler mærket: 270-A-1629 BUND KANAL

**Kun de markerede punkter er målt.**

#### Bemærkninger:

Aflæsning er middelværdien af flere aflæsninger på det kalibrerede måleinstrument.  
Fejl = Aflæsning - referenceværdi.

Den rapporterede eksplanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

Alle temperaturer er i henhold til ITS90

#### Kalibreringsforhold:

Rumtemperatur:  $22, \text{ }^{\circ}\text{C} \pm 1,1 \text{ }^{\circ}\text{C}$   
Relativ fugtighed:  $51,5 \text{ \%rh} \pm 11,6 \text{ \%rh}$   
Barometerstand:  $1017,2 \text{ mbar} \pm 7,7 \text{ mbar}$

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

### KALIBRERINGSCERTIFIKAT

### LABORATORIEBETINGELSER OG SPORBARHED

#### Laboratoriebetingelser:

|                             |            |
|-----------------------------|------------|
| Rumtemperatur (°C) :        | 22,6 ± 0,6 |
| Relativ luftfugtighed (%) : | 52 ± 10    |
| Barometerstand (mbar) :     | 1015,3 ± 1 |

#### Referencer:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

#### Usikkerhed:

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden multipliceret med dækningsfaktoren  $k = 2$ , som for en normalfordeling svarer til en dækningssandsynlighed på ca. 95%. Standardusikkerheden er fastlagt i overensstemmelse med EA-4/02.

### KALIBRERINGSCERTIFIKAT

### LABORATORIEBETINGELSER OG SPORBARHED

#### Laboratoriebetingelser:

|                             |            |
|-----------------------------|------------|
| Rumtemperatur (°C) :        | 22,5 ± 0,6 |
| Relativ luftfugtighed (%) : | 51 ± 10    |
| Barometerstand (mbar) :     | 1015,5 ± 1 |

#### Referencer:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

#### Usikkerhed:

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden multipliceret med dækningsfaktoren  $k = 2$ , som for en normalfordeling svarer til en dækningssandsynlighed på ca. 95%. Standardusikkerheden er fastlagt i overensstemmelse med EA-4/02.

## Kalibrering Humimeter, Fugtmåler

Måleskema til kontrol af Fugtmåler(EPA)

Dato:

01-09-2020

Udført af:

MXB

Emne Id nr.:

145070

Certifikat nr.:

ELAB-36-2020

Kalibrator ref.: 148135 (test block)

**Fremgangsmetode:** Fugtmåler kontrolleres op imod test block fra samme producent. Er visningen indenfor range er grundkalibrering OK.  
[https://www.youtube.com/watch?v=wmGqFWhd\\_Yk](https://www.youtube.com/watch?v=wmGqFWhd_Yk)

- 1- Sørg for der ikke er fugt på nålene.
- 2- Tænd og aflæs rumtemperatur: 24,1 (range 20-26°C)
- 3- Find "Test Block"
- 4- Test side 1 "22,0" ved at sætte de to flanger fra "test block'en" på de to møtrikker nålene er monteret med
- 5- Noter hvad apparatet mäter: 22,3% (range 21,5-22,5%)
- 6- Test side 2 "41,0" ved at sætte de to flanger fra "test block'en" på de to møtrikker nålene er monteret med
- 7- Noter hvad apparatet mäter: 41,3% (range 39,5-42,0%)
- 8- Er visningerne uden for det anbefalede range kan punkter sidst i denne video følges, alternativt sendes apparat til kalibrering.
- 9- Apparat bruges normalt kun som rettesnor for fugtniveau, ikke til endelig fugtangivelse. Til endeligt fugtangivelse benyttes ovn i mellemgang.

# KALIBRERINGSCERTIFIKAT

CERTIFIKATNR.:

**200-P-25427**

Side 1 af 4  
Antal bilag: 0  
Init: KOH/MO

**Rekvirent:** Teknologisk Institut, Biomasse og bioraffinering  
Kongsvang Allé 29  
8000 Århus C

**Emne:** **Vacuummeter, EPA (-H)**  
**Fabrikat:** Wika  
**Kundemærke:** **145074**  
**Klasse:** 1,6  
**Diameter:** 60 mm

**Rekvissionsnr.: MXB**

Periode: Modtaget: 04-09-2020

Kalibreret: **09-09-2020**

## **Procedure:** D1-2.1

## Bemærkninger:

**Vilkår:** Kalibreringen er udført akkrediteret i henhold til internationale krav (ISO/IEC 17025:2005) og i henhold til Teknologisk Instituts almindelige vilkår. Kalibreringsresultater gælder udelukkende for det kalibrerede emne. Kalibreringscertifikatet må kun gengives i uddrag, hvis Teknologisk Institut skriftligt har godkendt uddraget.

### KALIBRERINGSCERTIFIKAT Fejlkurve

**Kun de markerede punkter er målt.**

#### Bemærkninger:

Fejl = aflæsning middel - referenceværdi.

Den beregnede standardusikkerhed inkluderer relevante korttidsbidrag samt den halve hysterese fra det kalibrerede emne.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

#### Kalibreringsforhold:

|                    |  |
|--------------------|--|
| Prøvemedium:       | Nitrogen   |
| Rumtemperatur:     | $20,2 \text{ }^{\circ}\text{C} \pm 0,3 \text{ }^{\circ}\text{C}$ |
| Relativ fugtighed: | $64,2 \text{ \%rh} \pm 4,2 \text{ \%rh}$                         |
| Barometerstand:    | $1010 \text{ mbar} \pm 2,0 \text{ mbar}$                         |

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

### KALIBRERINGSCERTIFIKAT Fejlkurve

**Kun de markerede punkter er målt.**

#### Bemærkninger:

Fejl = aflæsning middel - referenceværdi.

Den beregnede standardusikkerhed inkluderer relevante korttidsbidrag samt den halve hysterese fra det kalibrerede emne.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

#### Kalibreringsforhold:

Prøvemedium: Nitrogen

Rumtemperatur:  $20 \text{ }^{\circ}\text{C} \pm 0,3 \text{ }^{\circ}\text{C}$

Relativ fugtighed:  $47,5 \% \text{rh} \pm 4,2 \% \text{rh}$

Barometerstand:  $1017,6 \text{ mbar} \pm 2,0 \text{ mbar}$

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

MXB

**Kontrol af lækage efter pumper i forbindelse med EPA målinger på stand E.**

Dato: 17.09.2020

Int.: MXB

Ref.: 270-A-2406 (TSI)

Id nr.: 169522

Cert nr.: ELAB-38-2020

Kontrol af lækage efter pumpen på "Hel" serie

Startværdi: **1760** Pa

Slutværdi efter 1 minut: **1560** Pa

Kontrol af lækage efter pumpen på "Delt" serien

Startværdi: **1740** Pa

Slutværdi efter 1 minut: **1640** Pa

Kontrol af lækage efter pumpen på "Rum" serien

Startværdi: **1800** Pa

Slutværdi efter 1 minut: **1780** Pa

(Krav er startværdi < 1800Pa og slutværdi >1300Pa ved 1 minuts måletid)

Luk de 2 drøvleventiler helt, og påfør tryk med håndpumpe på udgang af kugleflowmeteret (Øverst).

## Annex 16

Title: HF1 ASTM PM calculations

Pages total: 11, excl this cover page

**Calculations PM**

ASTM E2780 and E2515

EN-NS-EPA-Ber 3-61 01-09-2020 MXB

**Weight of test fuel spacers, dry basis, kg**

E2780

$$\text{Equation (1)} \quad M_{Sdb} = (M_{Swb}) * \left( \frac{100}{100 + FM_S} \right)$$

M\_swb 0 kg (wet basis)  
 FM\_s 0 % (dry basis)

$$\begin{aligned} M_{Sdb} &= (0) * (100 / (100 + 0)) \text{ kg (dry basis)} \\ M_{Sbd} &= 0 \text{ kg (dry basis)} \end{aligned}$$

**Weight of test fuel crip, excluding nails and spacers, dry basis, kg**

E2780

$$\text{Equation (2)} \quad M_{Cdb} = \Sigma(M_{CPnwb}) * \left( \frac{100}{100 + FM_{CPn}} \right)$$

M\_CPnwb #REF! kg (wet basis)  
 FM\_CPN 0 % (dry basis)

$$\begin{aligned} M_{Cdb} &= \Sigma((#REF!) * (100 / (100 + 0))) \text{ kg (dry basis)} \\ M_{Cdb} &= #REF! \text{ kg (dry basis)} \end{aligned}$$

**Density of fuel crip, excluding spacers and nails, dry basis, kg/m3**

E2780

$$\text{Equation (3)} \quad D_{Cdb} = \frac{M_{Cdb}}{V_C}$$

M\_Cdb #REF! kg (dry basis)  
 V\_C #N/A m3

$$\begin{aligned} D_{Cdb} &= #REF! / #N/A \text{ kg (dry) / m3} \\ D_{Cdb} &= #REF! \text{ kg (dry) / m3} \end{aligned}$$

**Total weight of fuel crip excluding nails, dry basis, kg**  
E2780

Equation (4)  $M_{FTAdb} = M_{Sdb} + M_{Cdb}$

$$\begin{array}{ll} M_{Sdb} & 0 \text{ kg (dry basis)} \\ M_{Cdb} & \#REF! \text{ kg (dry basis)} \end{array}$$

$$\begin{array}{lll} M_{FTAdb} & = & 0 + \#REF! \text{ kg (dry basis)} \\ M_{FTAdb} & = & \#REF! \text{ kg (dry basis)} \end{array}$$

**Burn rate, kg (dry/h)**

E2780

Equation (5)  $BR = \frac{60 * M_{FTAdb}}{\theta}$

$$\begin{array}{ll} M_{FTAdb} & \#REF! \text{ kg (dry basis)} \\ \theta & 101,25 \text{ min} \end{array}$$

$$BR = \frac{60}{101} \times \#REF!$$

$$BR = \#REF!$$

**Air velocity in tunnel at traverse measurements:**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|        |                |
|--------|----------------|
| F_p    | 1,00 (Direkt)  |
| K_p    | 34,97 -        |
| C_p    | 0,99 -         |
| ΔP_avg | 3,14 mmVS      |
| T_s    | 297,30 K       |
| P_s    | 762,01 mmHg    |
| M_s    | 29,00 g/g mole |

$$V_s = 1,00 * 34,97 * 0,99 * (3,14)^{0,5} * \left( \frac{297,30}{762,01 * 29,00} \right)^{0,5}$$

$$V_s = 7,12 \text{ m/s (V_scent)}$$

**Pitot tube factor for center:**

E2515

$$\text{Equation (1)} \quad F_p = \frac{V_{strav}}{V_{scent}}$$

|         |          |           |
|---------|----------|-----------|
| V_strav | 6,52 m/s | (Average) |
| V_scent | 7,12 m/s | (Average) |

$$F_p = \frac{6,52}{7,12}$$

$$F_p = 0,9160 -$$

**Air velocity in dilution tunnel during test charge**  
E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|               | PR        | -                   | Proportional Rate Variation - Calculated PR for each 10-min interval, i, of the test run                              |

## Annex 17

Title: LF ASTM PM calculations

Pages total: 11, excl this cover page

**Calculations PM**

ASTM E2780 and E2515

EN-NS-EPA-Ber 3-61 01-09-2020 MXB

Manufacturer: Morsø Jernstøberi AS  
 Type: 2B Classic 2020  
 ELAB no.: 2526  
 Order number: #N/A  
 Testdate: 02-09-2020  
 File Name: LF 020920  
 Testrun: #2  
 Fil dato og tid (Start): 02-09-20 14:01:50

**Weight of test fuel spacers, dry basis, kg**

E2780

$$\text{Equation (1)} \quad M_{Sdb} = (M_{Swb}) * \left( \frac{100}{100 + FM_S} \right)$$

M\_Swb 0 kg (wet basis)  
 FM\_S 0 % (dry basis)

$$\begin{aligned} M_{Sdb} &= (0) \times (100 / (100 + 0)) \text{ kg (dry basis)} \\ M_{Sbd} &= 0 \text{ kg (dry basis)} \end{aligned}$$

**Weight of test fuel crip, excluding nails and spacers, dry basis, kg**

E2780

$$\text{Equation (2)} \quad M_{Cdb} = \Sigma(M_{CPnwb}) * \left( \frac{100}{100 + FM_{CPn}} \right)$$

M\_CPnwb #REF! kg (wet basis)  
 FM\_CPN 0 % (dry basis)

$$\begin{aligned} M_{Cdb} &= \Sigma[(#REF! / #N/A) \times (100 / (100 + 0))] \text{ kg (dry basis)} \\ M_{Cdb} &= #REF! \text{ kg (dry basis)} \end{aligned}$$

**Density of fuel crip, excluding spacers and nails, dry basis, kg/m3**

E2780

$$\text{Equation (3)} \quad D_{Cdb} = \frac{M_{Cdb}}{V_C}$$

M\_Cdb #REF! kg (dry basis)  
 V\_C #N/A m3

$$\begin{aligned} D_{Cdb} &= #REF! / #N/A \text{ kg (dry) / m3} \\ D_{Cdb} &= #REF! \text{ kg (dry) / m3} \end{aligned}$$

**Total weight of fuel crip excluding nails, dry basis, kg**  
E2780

Equation (4)  $M_{FTAdb} = M_{Sdb} + M_{Cdb}$

$$\begin{array}{ll} M_{Sdb} & 0 \text{ kg (dry basis)} \\ M_{Cdb} & \#REF! \text{ kg (dry basis)} \end{array}$$

$$\begin{array}{lll} M_{FTAdb} & = & 0 + \#REF! \text{ kg (dry basis)} \\ M_{FTAdb} & = & \#REF! \text{ kg (dry basis)} \end{array}$$

**Burn rate, kg (dry/h)**

E2780

Equation (5)  $BR = \frac{60 * M_{FTAdb}}{\theta}$

$$\begin{array}{ll} M_{FTAdb} & \#REF! \text{ kg (dry basis)} \\ \theta & 313,80 \text{ min} \end{array}$$

$$BR = \frac{60}{314} \times \#REF!$$

$$BR = \#REF!$$

**Air velocity in tunnel at traverse measurements:**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|        |                |
|--------|----------------|
| F_p    | 1,00 (Direkt)  |
| K_p    | 34,97 -        |
| C_p    | 0,99 -         |
| ΔP_avg | 3,14 mmVS      |
| T_s    | 297,30 K       |
| P_s    | 760,13 mmHg    |
| M_s    | 29,00 g/g mole |

$$V_s = 1,00 * 34,97 * 0,99 * (3,14)^{0,5} * \left( \frac{297,30}{760,13} \right)^{0,5}$$

$$V_s = 7,13 \text{ m/s (V_scent)}$$

**Pitot tube factor for center:**

E2515

$$\text{Equation (1)} \quad F_p = \frac{V_{strav}}{V_{scent}}$$

|         |          |           |
|---------|----------|-----------|
| V_strav | 6,53 m/s | (Average) |
| V_scent | 7,13 m/s | (Average) |

$$F_p = \frac{6,53}{7,13}$$

$$F_p = 0,9160 -$$

**Air velocity in dilution tunnel during test charge**  
E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|             |                |
|-------------|----------------|
| F_p         | 0,9160 -       |
| K_p         | 34,97 -        |
| C_p         | 0,99 -         |
| Delta P_avg | 3,14 mmVS      |
| T_s         | 302,71 K       |
| P_s         | 760,15 mmHg    |
| M_s         | 29,00 g/g mole |

$$V_s = 0,9160 \times 34,97 \times 0,99 \times (3,14)^{0,5} \times \left( \frac{302,71}{760,15 \times 29,00} \right)^{0,5}$$

$$V_s = 6,59 \text{ m/s (V_scent)}$$

**Average gas flow rate in dilution tunnel:**  
E2515

$$\text{Equation (3)} \quad Q_{std} = 60 * (1 - B_{ws}) * V_s * A * \left( \frac{T_{std} * P_s}{T_s * P_{std}} \right)$$

|       |                         |
|-------|-------------------------|
| B_ws  | 0,02 -                  |
| V_s   | 6,589983 m/s            |
| A     | 0,017671 m <sup>2</sup> |
| T_std | 293 K                   |
| P_s   | 760,1465 mmHg           |
| T_s   | 302,7098 K              |
| P_std | 760 mmHg                |

$$Q_{std} = 60 \times (1 - 0,02) \times 6,589983 \times 0,017671 \times \left( \frac{293 \times 760}{302,7098 \times 760} \right)$$

$$Q_{std} = 6,62917 \text{ dscm/min}$$

**Measurements sample train 1 entire charge**

E2515

$$\text{Equation (7_1)} \quad V_{mc} = V_m - (L_p - L_a) * \theta$$

$$\text{Equation (7)} \quad V_{mc(\text{std})} = K_1 * V_{mc} * Y * \left( \frac{P_{bar} + \frac{\Delta H}{13,6}}{T_m} \right)$$

|         |                        |            |              |
|---------|------------------------|------------|--------------|
| V_m     | 2,24598 dcm            |            |              |

$$PR = \frac{313,80 \times ((0,08 \times 6,59 \times 300,8 \times 313) / (10 \times 2 \times 6,67 \times 302,7 \times 301))) \times 100}{}$$

$$PR = 102,013 -$$

**Notation and units****E2780**

- Equation (1) M\_Swb weight of all test fuel spacers, wet basis, kg  
 FM\_S average fuel moisture of all test fuel spacers, % dry basis  
 M\_Sdb weight of all test fuel spacers, dry basis, kg
- Equation (2) M\_CPNwb weight of each test fuel piece n in fuel crib, excluding nails and spacers, wet basis, kg  
 FM\_CPN average fuel moisture of test fuel piece n in fuel crib, % dry basis,  
 n individual test fuel pieces that comprise the test fuel crib, as applicable  
 M\_Cdb weight of fuel crib, excluding nails and spacers, dry basis, kg
- Equation (3) M\_Cdb weight of fuel crib, excluding nails and spacers, dry basis, kg  
 V\_C Volume of fuel crib, m<sup>3</sup>  
 D\_Cdb density of fuel, crib, excluding spacers and nails, dry basis, kg/m<sup>3</sup>
- Equation (4) M\_Sdb weight of all test fuel spacers, dry basis, kg  
 M\_Cdb weight of fuel crib, excluding nails and spacers, dry basis, kg  
 M\_FTAdb total weight of fuel crib excluding nails, dry basis, kg
- Equation (5) M\_FTAdb total weight of fuel crib excluding nails, dry basis, kg  
 θ total length of test rim, min.  
 BR dry burn rate, kg/h

## Annex 18

Title: HF2 ASTM PM calculations

Pages total: 11, excl this cover page

**Calculations PM**

ASTM E2780 and E2515

EN-NS-EPA-Ber 3-61 01-09-2020 MXB

Manufacturer: Morsø Jernstøberi AS  
 Type: 2 B Classic 2020  
 ELAB no.: 2526  
 Order number: #N/A  
 Testdate: 03-09-2020  
 File Name: HF2 PM Calc  
 Testrun: #3  
 Fil dato og tid (Start): 03-09-20 08:30:55

**Weight of test fuel spacers, dry basis, kg**

E2780

$$\text{Equation (1)} \quad M_{Sdb} = (M_{Swb}) * \left( \frac{100}{100 + FM_S} \right)$$

M\_Swb 0 kg (wet basis)  
 FM\_S 0 % (dry basis)

$$\begin{aligned} M_{Sdb} &= (0) \times (100 / (100 + 0)) \text{ kg (dry basis)} \\ M_{Sbd} &= 0 \text{ kg (dry basis)} \end{aligned}$$

**Weight of test fuel crip, excluding nails and spacers, dry basis, kg**

E2780

$$\text{Equation (2)} \quad M_{Cdb} = \Sigma(M_{CPnwb}) * \left( \frac{100}{100 + FM_{CPn}} \right)$$

M\_CPnwb #REF! kg (wet basis)  
 FM\_CPN 0 % (dry basis)

$$\begin{aligned} M_{Cdb} &= \Sigma[(#REF! / #N/A) \times (100 / (100 + 0))] \text{ kg (dry basis)} \\ M_{Cdb} &= #REF! \text{ kg (dry basis)} \end{aligned}$$

**Density of fuel crip, excluding spacers and nails, dry basis, kg/m3**

E2780

$$\text{Equation (3)} \quad D_{Cdb} = \frac{M_{Cdb}}{V_C}$$

M\_Cdb #REF! kg (dry basis)  
 V\_C #N/A m3

$$\begin{aligned} D_{Cdb} &= #REF! / #N/A \text{ kg (dry) / m3} \\ D_{Cdb} &= #REF! \text{ kg (dry) / m3} \end{aligned}$$

**Total weight of fuel crip excluding nails, dry basis, kg**  
E2780

Equation (4)  $M_{FTAdb} = M_{Sdb} + M_{Cdb}$

$$\begin{array}{ll} M_{Sdb} & 0 \text{ kg (dry basis)} \\ M_{Cdb} & \#REF! \text{ kg (dry basis)} \end{array}$$

$$\begin{array}{lll} M_{FTAdb} & = & 0 + \#REF! \text{ kg (dry basis)} \\ M_{FTAdb} & = & \#REF! \text{ kg (dry basis)} \end{array}$$

**Burn rate, kg (dry/h)**

E2780

Equation (5)  $BR = \frac{60 * M_{FTAdb}}{\theta}$

$$\begin{array}{ll} M_{FTAdb} & \#REF! \text{ kg (dry basis)} \\ \theta & 90,85 \text{ min} \end{array}$$

$$BR = \frac{60}{91} \times \#REF!$$

$$BR = \#REF!$$

**Air velocity in tunnel at traverse measurements:**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|        |                |
|--------|----------------|
| F_p    | 1,00 (Direkt)  |
| K_p    | 34,97 -        |
| C_p    | 0,99 -         |
| ΔP_avg | 3,21 mmVS      |
| T_s    | 299,50 K       |
| P_s    | 758,64 mmHg    |
| M_s    | 29,00 g/g mole |

$$V_s = 1,00 * 34,97 * 0,99 * \left( \frac{3,21}{\sqrt{758,64 * 29,00}} \right)^{0,5}$$

$$V_s = 7,24 \text{ m/s (V_scent)}$$

**Pitot tube factor for center:**

E2515

$$\text{Equation (1)} \quad F_p = \frac{V_{strav}}{V_{scent}}$$

|         |          |           |
|---------|----------|-----------|
| V_strav | 6,64 m/s | (Average) |
| V_scent | 7,24 m/s | (Average) |

$$F_p = \frac{6,64}{7,24}$$

$$F_p = 0,9176 -$$

**Air velocity in dilution tunnel during test charge**  
E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|             |                |            |          |
|-------------|----------------|------------|----------|
| F_p         | 0,9176 -       |            |          |
| K_p         | 34,97 -        |            |          |
| C_p         | 0,99 -         |            |          |
| Delta P_avg | 3,11 mmVS      | P_Dynamisk | 30,47 Pa |
| T_s         | 309,85 K       |            |          |
| P_s         | 758,65 mmHg    |            |          |
| M_s         | 29,00 g/g mole |            |          |

$$V_s = 0,9176 \times 34,97 \times 0,99 \times (3,11)^{0,5} \times \left( \frac{309,85}{758,65 \times 29,00} \right)^{0,5}$$

$$V_s = 6,65 \text{ m/s (V_scent)}$$

**Average gas flow rate in dilution tunnel:**

E2515

$$\text{Equation (3)} \quad Q_{std} = 60 * (1 - B_{ws}) * V_s * A * \left( \frac{T_{std} * P_s}{T_s * P_{std}} \right)$$

|       |                         |          |         |
|-------|-------------------------|----------|---------|
| B_ws  | 0,02 -                  |          |         |
| V_s   | 6,645463 m/s            |          |         |
| A     | 0,017671 m <sup>2</sup> |          |         |
| T_std | 293 K                   |          |         |
| P_s   | 758,6473 mmHg           | P_s      | #### Pa |
| T_s   | 309,8505 K              | T_Kanal  | 36,9 °C |
| P_std | 760 mmHg                | P_s_Tryk | -47 Pa  |

$$Q_{std} = 60 \times (1 - 0,02) \times 6,645463 \times 0,017671 \times \left( \frac{293 \times 758,6473}{309,8505 \times 760} \right)$$

$$Q_{std} = 6,51803 \text{ dscm/min}$$

**Measurements sample train 1 entire charge**

E2515

$$\text{Equation (7_1)} \quad V_{mc} = V_m - (L_p - L_a) * \theta$$

$$\text{Equation (7)} \quad V_{mc(\text{std})} = K_1 * V_{mc} * Y * \left( \frac{P_{bar} + \frac{\Delta H}{13,6}}{T_m} \right)$$

|               | ΔH        | mmVC                | Average pressure at the outlet of the dry gas meter or the average differential pressure across the orifice meter     |
|               | T_m       | K                   | Absolute average dry gas meter temperature  |
|               | V_mr(std) | dscm                | Volume of room air sample measured by the dry gas meter, corrected to standard conditions                             |
| Equation (14) | K_2       | g/mg                | 0.001   |
|               | m_r       | mg                  | mass of particulate from the filter, filter gasket, and probe assembly from the room air blank filter holder assembly |
|               | V_mr(std) | dscm                | Volume of room air sample measured by the dry gas meter, corrected to standard conditions                             |
| Equation (16) | θ         | Min                 | Total sampling time   |
|               | V_mi      | dcm                 | Volume of gas sample as measured by dry gas meter during each 10-min interval, i, of the test run                     |
|               | V_s       | m/s                 | Average gas velocity in the dilution tunnel   |
|               | T_m       | K                   | Absolute average dry gas meter temperature  |
|               | T_si      | K                   | Absolute average gas temperature in the dilution tunnel during each 10-min interval, i, of the test run               |
|               | V_m       | dcm                 | Volume of gas sample as measured by dry gas meter   |
|               | V_si      | dcm                 | Volume of gas sampled as measured by dry gas meter during each 10-min interval, i, of the test run                    |
|               | T_s       | K                   | Absolute average gas temperature in the dilution tunnel   |
|               | T_mi      | K                   | Absolute average dry gas meter temperature during each 10-min interval, i, of the test run                            |
|               | PR        | -                   | Proportional Rate Variation - Calculated PR for each 10-min interval, i, of the test run                              |

## Annex 19

Title: MF ASTM PM calculations

Pages total: 11, excl this cover page

**Calculations PM**

ASTM E2780 and E2515

EN-NS-EPA-Ber 3-61 01-09-2020 MXB

Manufacturer: Morsø Jernstøberi AS  
 Type: 2 B Classic 2020  
 ELAB no.: 2526  
 Order number: #N/A  
 Testdate: 03-09-2020  
 File Name: MF PM Calc  
 Testrun: #4  
 Fil dato og tid (Start): 03-09-20 08:30:55

**Weight of test fuel spacers, dry basis, kg**

E2780

$$\text{Equation (1)} \quad M_{Sdb} = (M_{Swb}) * \left( \frac{100}{100 + FM_S} \right)$$

M\_Swb 0 kg (wet basis)  
 FM\_S 0 % (dry basis)

$$\begin{aligned} M_{Sdb} &= (0) \times (100 / (100 + 0)) \text{ kg (dry basis)} \\ M_{Sbd} &= 0 \text{ kg (dry basis)} \end{aligned}$$

**Weight of test fuel crip, excluding nails and spacers, dry basis, kg**

E2780

$$\text{Equation (2)} \quad M_{Cdb} = \Sigma(M_{CPnwb}) * \left( \frac{100}{100 + FM_{CPn}} \right)$$

M\_CPnwb #REF! kg (wet basis)  
 FM\_CPN 0 % (dry basis)

$$\begin{aligned} M_{Cdb} &= \Sigma[(#REF! / #N/A) \times (100 / (100 + 0))] \text{ kg (dry basis)} \\ M_{Cdb} &= #REF! \text{ kg (dry basis)} \end{aligned}$$

**Density of fuel crip, excluding spacers and nails, dry basis, kg/m3**

E2780

$$\text{Equation (3)} \quad D_{Cdb} = \frac{M_{Cdb}}{V_C}$$

M\_Cdb #REF! kg (dry basis)  
 V\_C #N/A m3

$$\begin{aligned} D_{Cdb} &= #REF! / #N/A \text{ kg (dry) / m3} \\ D_{Cdb} &= #REF! \text{ kg (dry) / m3} \end{aligned}$$

**Total weight of fuel crip excluding nails, dry basis, kg**  
E2780

Equation (4)  $M_{FTAdb} = M_{Sdb} + M_{Cdb}$

$$\begin{array}{ll} M_{Sdb} & 0 \text{ kg (dry basis)} \\ M_{Cdb} & \#REF! \text{ kg (dry basis)} \end{array}$$

$$\begin{array}{lll} M_{FTAdb} & = & 0 + \#REF! \text{ kg (dry basis)} \\ M_{FTAdb} & = & \#REF! \text{ kg (dry basis)} \end{array}$$

**Burn rate, kg (dry/h)**

E2780

Equation (5)  $BR = \frac{60 * M_{FTAdb}}{\theta}$

$$\begin{array}{ll} M_{FTAdb} & \#REF! \text{ kg (dry basis)} \\ \theta & 203,63 \text{ min} \end{array}$$

$$BR = \frac{60}{204} \times \#REF!$$

$$BR = \#REF!$$

**Air velocity in tunnel at traverse measurements:**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|        |                |
|--------|----------------|
| F_p    | 1,00 (Direkt)  |
| K_p    | 34,97 -        |
| C_p    | 0,99 -         |
| ΔP_avg | 3,21 mmVS      |
| T_s    | 299,50 K       |
| P_s    | 758,64 mmHg    |
| M_s    | 29,00 g/g mole |

$$V_s = 1,00 * 34,97 * 0,99 * \left( \frac{3,21}{758,64} \right)^{0,5} * \left( \frac{299,50}{29,00} \right)^{0,5}$$

$$V_s = 7,24 \text{ m/s (V_scent)}$$

**Pitot tube factor for center:**

E2515

$$\text{Equation (1)} \quad F_p = \frac{V_{strav}}{V_{scent}}$$

|         |          |           |
|---------|----------|-----------|
| V_strav | 6,64 m/s | (Average) |
| V_scent | 7,24 m/s | (Average) |

$$F_p = \frac{6,64}{7,24}$$

$$F_p = 0,9176 -$$

**Air velocity in dilution tunnel during test charge**  
E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|             |                |            |          |
|-------------|----------------|------------|----------|
| F_p         | 0,9176 -       |            |          |
| K_p         | 34,97 -        |            |          |
| C_p         | 0,99 -         |            |          |
| Delta P_avg | 3,03 mmVS      | P_Dynamisk | 29,70 Pa |
| T_s         | 304,80 K       |            |          |
| P_s         | 758,66 mmHg    |            |          |
| M_s         | 29,00 g/g mole |            |          |

$$V_s = 0,9176 \times 34,97 \times 0,99 \times (3,03)^{0,5} \times \left( \frac{304,80}{758,66} \times \frac{29,70}{29,00} \right)^{0,5}$$

$$V_s = 6,51 \text{ m/s (V_scent)}$$

**Average gas flow rate in dilution tunnel:**

E2515

$$\text{Equation (3)} \quad Q_{std} = 60 * (1 - B_{ws}) * V_s * A * \left( \frac{T_{std} * P_s}{T_s * P_{std}} \right)$$

|       |                         |         |         |          |        |
|-------|-------------------------|---------|---------|----------|--------|
| B_ws  | 0,02 -                  |         |         |          |        |
| V_s   | 6,507038 m/s            |         |         |          |        |
| A     | 0,017671 m <sup>2</sup> |         |         |          |        |
| T_std | 293 K                   |         |         |          |        |
| P_s   | 758,6565 mmHg           | P_s     | #### Pa | P_s_Tryk | -46 Pa |
| T_s   | 304,8028 K              | T_Kanal | 31,8 °C |          |        |
| P_std | 760 mmHg                |         |         |          |        |

$$Q_{std} = 60 \times (1 - 0,02) \times 6,507038 \times 0,017671 \times \left( \frac{293}{304,8} \times \frac{758,6565}{760} \right)$$

$$Q_{std} = 6,48804 \text{ dscm/min}$$

**Measurements sample train 1 entire charge**

E2515

$$\text{Equation (7_1)} \quad V_{mc} = V_m - (L_p - L_a) * \theta$$

$$\text{Equation (7)} \quad V_{mc(\text{std})} = K_1 * V_{mc} * Y * \left( \frac{P_{bar} + \frac{\Delta H}{13,6}}{T_m} \right)$$

|         |                        |            |              |
|---------|------------------------|------------|--------------|

$$V_{mr}(\text{std}) = 0,3855 \times 1,329355 \times 1 \times \left( \frac{759,1 + \frac{0}{13,6}}{297} \right)$$

$$V_{mr}(\text{std}) = 1,30803 \text{ dscm}$$

$$\text{Equation (14)} \quad C_r = K_2 * \frac{m_r}{V_{mr}(\text{std})}$$

K\_2 0,001 g/mg  
 m\_r 8,53E-14 mg  
 V\_m\_r(std) 1,308033 dscm

$$C_r = 0,001 \times \frac{8,5E-14}{1,30803}$$

$$C_r = 6,5E-17 \text{ g/dscm}$$

**Proportional Rate first 10 minutes**

E2515

$$\text{Equation (16)} \quad PR = \frac{\theta * (V_{mi} * V_s * T_m * T_{si})}{10 * (V_m * V_{si} * T_s * T_{mi})} * 100$$

|          |            |
|----------|------------|
| $\theta$ | 203,63 min |
| $V_{mi}$ | 0,07623 l  |
| $V_s$    | 6,51 m/s   |
| $T_m$    | 300,9938 K |
| $T_{si}$ | 312,3815 K |
| $V_m$    | 1,57 l     |
| $V_{si}$ | 6,66 m/s   |
| $T_s$    | 304,8028 K |
| $T_{mi}$ | 301,185 K  |

$$PR = \frac{203,63 \times ((0,08 \times 6,51 \times 301 \times 312) / (10 \times 6,66 \times 304,8 \times 301))) \times 100}{(2 \times 301)}$$

$$PR = 98,8951 -$$

**Notation and units****E2780**

- Equation (1) M\_Swb weight of all test fuel spacers, wet basis, kg  
 FM\_S average fuel moisture of all test fuel spacers, % dry basis  
 M\_Sdb weight of all test fuel spacers, dry basis, kg
- Equation (2) M\_CPnwb weight of each test fuel piece n in fuel crib, excluding nails and spacers, wet basis, kg  
 FM\_CPn average fuel moisture of test fuel piece n in fuel crib, % dry basis,  
 n individual test fuel pieces that comprise the test fuel crib, as applicable  
 M\_Cdb weight of fuel crib, excluding nails and spacers, dry basis, kg
- Equation (3) M\_Cdb weight of fuel crib, excluding nails and spacers, dry basis, kg  
 V\_C Volume of fuel crib, m<sup>3</sup>  
 D\_Cdb density of fuel, crib, excluding spacers and nails, dry basis, kg/m<sup>3</sup>
- Equation (4) M\_Sdb weight of all test fuel spacers, dry basis, kg  
 M\_Cdb weight of fuel crib, excluding nails and spacers, dry basis, kg  
 M\_FTAdb total weight of fuel crib excluding nails, dry basis, kg
- Equation (5) M\_FTAdb total weight of fuel crib excluding nails, dry basis, kg  
 θ total length of test rim, min.  
 BR dry burn rate, kg/h

**E2515**

|               |           |                     |   |
|---------------|-----------|---------------------|---|
| Equation (9)  | F_p       | -                   | Adjustment factor for center of tunnel pitot tube placement   |
|               | K_p       | -                   | Pitot Tube Constant 34,97 m/sec   |
|               | C_p       | -                   | Pitot tube coefficient, dimensionless (assigned a value of 0.99)  |
|               | ΔP_avg    | mmVC                | Average velocity pressure in dilution tunnel, mm water  |
|               | T_s       | K                   | Absolute average gas temperature in the dilution tunnel   |
|               | P_s       | mm Hg               | Absolute average gas static pressure in dilution tunnel   |
|               | M_s       | g/g mole            | The dilution tunnel dry gas molecular weight (may be assumed to be 29 g/g mole)                                       |
|               | V_s       | m/s                 | Average gas velocity in the dilution tunnel   |
| Equation (1)  | F_p       | -                   | Adjustment factor for center of tunnel pitot tube placement   |
|               | V_strav   | m/s                 | Average gas velocity calculated after the multipoint Pitot traverse   |
|               | V_scent   | m/s                 | Average gas velocity at the center of the dilution tunnel calculated after the Pitot tube traverse                    |
| Equation (3)  | B_ws      | -                   | Water vapor in the gas steam, proportion by volume (assumed to be 0.02 (2.0%))  |
|               | V_s       | m/s                 | Average gas velocity in the dilution tunnel   |
|               | A         | m <sup>2</sup>      | Cross-sectional area of tunnel  |
|               | T_std     | K                   | Standard absolute temperature, 293K   |
|               | P_s       | mm Hg               | Absolute average gas static pressure in dilution tunnel   |
|               | T_s       | K                   | Absolute average gas temperature in the dilution tunnel   |
|               | P_std     | mmHg                | Standard absolute pressure, 760 mm Hg   |
|               | Q_std     | dscm/min            | Average gas flow rate in dilution tunnel  |
| Equation (7)  | V_m       | dcm                 | Volume of gas sample as measured by dry gas meter   |
|               | L_p       | m <sup>3</sup> /min | Leakage rate observed during the post-test leakcheck  |
|               | L_a       | m <sup>3</sup> /min | Maximum acceptable leakage rate for either a retest or post-test leak-check, equal to 0.0003 m <sup>3</sup> /min      |
|               | θ         | Min                 | Total sampling time   |
|               | V_mc      | -                   | $V_m - (L_p - L_a) * \theta$  |

|               | P_Bar     | mm Hg               | Barometric pressure at the sampling site.   |
|               | ΔH        | mmVC                | Average pressure at the outlet of the dry gas meter or the average differential pressure across the orifice meter     |
|               | T_m       | K                   | Absolute average dry gas meter temperature  |
|               | V_mc(std) | dscm                | Volume of air sample measured by the dry gas meter, corrected to standard conditions                                  |
| Equation (12) | m_p       | mg                  | mass of particulate from probe  |
|               | m_f       | mg                  | mass of particulate from filters  |
|               | m_g       | mg                  | mass of particulate from gaskets  |
|               | m_n       | mg                  | Total amount of particulate matter collected  |
| Equation (13) | K_2       | g/mg                | 0.001   |
|               | m_n       | mg                  | Total amount of particulate matter collected  |
|               | V_m(std)  | dscm                | Volume of gas sample measured by the dry gas meter, corrected to standard conditions                                  |
|               | c_s       | g/dscm              | Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions                        |
| Equation (15) | c_s       | g/dscm              | Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions                        |
|               | c_r       | g/dscm              | Concentration of particulate matter room air, dry basis, corrected to standard conditions                             |
|               | Q_std     | dscm/min            | Average gas flow rate in dilution tunnel  |
|               | θ         | Min                 | Total sampling time   |
|               | E_T       | g                   | Total particulate emissions   |
| Equation (8)  | K_1       | K/mm Hg             | 0.3855 K/mm Hg  |
|               | V_mr      | dcm                 | Volume of room air sampled as measured by dry gas meter   |
|               | Y         | -                   | Dry gas meter calibration factor  |
|               | P_bar     | mm Hg               | Barometric pressure at the sampling site.   |
|               | ΔH        | mmVC                | Average pressure at the outlet of the dry gas meter or the average differential pressure across the orifice meter     |
|               | T_m       | K                   | Absolute average dry gas meter temperature  |
|               | V_mr(std) | dscm                | Volume of room air sample measured by the dry gas meter, corrected to standard conditions                             |
| Equation (14) | K_2       | g/mg                | 0.001   |
|               | m_r       | mg                  | mass of particulate from the filter, filter gasket, and probe assembly from the room air blank filter holder assembly |
|               | V_mr(std) | dscm                | Volume of room air sample measured by the dry gas meter, corrected to standard conditions                             |
| Equation (16) | θ         | Min                 | Total sampling time   |
|               | V_mi      | dcm                 | Volume of gas sample as measured by dry gas meter during each 10-min interval, i, of the test run                     |
|               | V_s       | m/s                 | Average gas velocity in the dilution tunnel   |
|               | T_m       | K                   | Absolute average dry gas meter temperature  |
|               | T_si      | K                   | Absolute average gas temperature in the dilution tunnel during each 10-min interval, i, of the test run               |
|               | V_m       | dcm                 | Volume of gas sample as measured by dry gas meter   |
|               | V_si      | dcm                 | Volume of gas sampled as measured by dry gas meter during each 10-min interval, i, of the test run                    |
|               | T_s       | K                   | Absolute average gas temperature in the dilution tunnel   |
|               | T_mi      | K                   | Absolute average dry gas meter temperature during each 10-min interval, i, of the test run                            |
|               | PR        | -                   | Proportional Rate Variation - Calculated PR for each 10-min interval, i, of the test run                              |

## Annex 20

Title: HF3 ASTM PM calculations

Pages total: 11, excl this cover page

**Calculations PM**

ASTM E2780 and E2515

EN-NS-EPA-Ber 3-61 01-09-2020 MXB

Manufacturer: Morsø Jernstøberi AS  
 Type: 2B Classic 2020  
 ELAB no.: 2526  
 Order number: #N/A  
 Testdate: 04-09-2020  
 File Name: HF3 PM Calc  
 Testrun: #5  
 Fil dato og tid (Start): 04-09-20 09:16:54

**Weight of test fuel spacers, dry basis, kg**

E2780

$$\text{Equation (1)} \quad M_{Sdb} = (M_{Swb}) * \left( \frac{100}{100 + FM_S} \right)$$

M\_Swb 0 kg (wet basis)  
 FM\_S 0 % (dry basis)

$$\begin{aligned} M_{Sdb} &= (0) \times (100 / (100 + 0)) \text{ kg (dry basis)} \\ M_{Sbd} &= 0 \text{ kg (dry basis)} \end{aligned}$$

**Weight of test fuel crip, excluding nails and spacers, dry basis, kg**

E2780

$$\text{Equation (2)} \quad M_{Cdb} = \Sigma(M_{CPnwb}) * \left( \frac{100}{100 + FM_{CPn}} \right)$$

M\_CPnwb #REF! kg (wet basis)  
 FM\_CPN 0 % (dry basis)

$$\begin{aligned} M_{Cdb} &= \Sigma[(#REF! / #N/A) \times (100 / (100 + 0))] \text{ kg (dry basis)} \\ M_{Cdb} &= #REF! \text{ kg (dry basis)} \end{aligned}$$

**Density of fuel crip, excluding spacers and nails, dry basis, kg/m3**

E2780

$$\text{Equation (3)} \quad D_{Cdb} = \frac{M_{Cdb}}{V_C}$$

M\_Cdb #REF! kg (dry basis)  
 V\_C #N/A m3

$$\begin{aligned} D_{Cdb} &= #REF! / #N/A \text{ kg (dry) / m3} \\ D_{Cdb} &= #REF! \text{ kg (dry) / m3} \end{aligned}$$

**Total weight of fuel crip excluding nails, dry basis, kg**  
E2780

Equation (4)  $M_{FTAdb} = M_{Sdb} + M_{Cdb}$

$$\begin{array}{ll} M_{Sdb} & 0 \text{ kg (dry basis)} \\ M_{Cdb} & \#REF! \text{ kg (dry basis)} \end{array}$$

$$M_{FTAdb} = 0 + \#REF! \text{ kg (dry basis)}$$

$$M_{FTAdb} = \#REF! \text{ kg (dry basis)}$$

**Burn rate, kg (dry/h)**

E2780

Equation (5)  $BR = \frac{60 * M_{FTAdb}}{\theta}$

$$\begin{array}{ll} M_{FTAdb} & \#REF! \text{ kg (dry basis)} \\ \theta & 86,45 \text{ min} \end{array}$$

$$BR = \frac{60}{86} \times \#REF!$$

$$BR = \#REF!$$

**Air velocity in tunnel at traverse measurements:**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|        |                |
|--------|----------------|
| F_p    | 1,00 (Direkt)  |
| K_p    | 34,97 -        |
| C_p    | 0,99 -         |
| ΔP_avg | 2,94 mmVS      |
| T_s    | 300,40 K       |
| P_s    | 759,04 mmHg    |
| M_s    | 29,00 g/g mole |

$$V_s = 1,00 * 34,97 * 0,99 * \left( \frac{2,94}{759,04} \right)^{0,5} * \left( \frac{300,40}{29,00} \right)^{0,5}$$

$$V_s = 6,93 \text{ m/s (V_scent)}$$

**Pitot tube factor for center:**

E2515

$$\text{Equation (1)} \quad F_p = \frac{V_{strav}}{V_{scent}}$$

|         |          |           |
|---------|----------|-----------|
| V_strav | 6,35 m/s | (Average) |
| V_scent | 6,93 m/s | (Average) |

$$F_p = \frac{6,35}{6,93}$$

$$F_p = 0,9167 -$$

**Air velocity in dilution tunnel during test charge**  
E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

|             |                |
|-------------|----------------|
| F_p         | 0,9167 -       |
| K_p         | 34,97 -        |
| C_p         | 0,99 -         |
| Delta P_avg | 3,04 mmVS      |
| T_s         | 310,69 K       |
| P_s         | 759,03 mmHg    |
| M_s         | 29,00 g/g mole |

$$V_s = 0,9167 \times 34,97 \times 0,99 \times (3,04)^{0,5} \times \left( \frac{310,69}{759,03} \times \frac{1}{29,00} \right)^{0,5}$$

$$V_s = 6,58 \text{ m/s (V_scent)}$$

**Average gas flow rate in dilution tunnel:**  
E2515

$$\text{Equation (3)} \quad Q_{std} = 60 * (1 - B_{ws}) * V_s * A * \left( \frac{T_{std} * P_s}{T_s * P_{std}} \right)$$

|       |                         |
|-------|-------------------------|
| B_ws  | 0,02 -                  |
| V_s   | 6,576306 m/s            |
| A     | 0,017671 m <sup>2</sup> |
| T_std | 293 K                   |
| P_s   | 759,0304 mmHg           |
| T_s   | 310,6881 K              |
| P_std | 760 mmHg                |

|         |         |
|---------|---------|
| P_s     | #### Pa |
| T_Kanal | 37,7 °C |

|          |        |
|----------|--------|
| P_s_Tryk | -46 Pa |
|----------|--------|

$$Q_{std} = 60 \times (1 - 0,02) \times 6,576306 \times 0,017671 \times \left( \frac{293}{310,69} \times \frac{759}{760} \right)$$

$$Q_{std} = 6,43606 \text{ dscm/min}$$

**Measurements sample train 1 entire charge**

E2515

$$\text{Equation (7_1)} \quad V_{mc} = V_m - (L_p - L_a) * \theta$$

$$\text{Equation (7)} \quad V_{mc(\text{std})} = K_1 * V_{mc} * Y * \left( \frac{P_{bar} + \frac{\Delta H}{13,6}}{T_m} \right)$$

|         |                        |            |              |

## Annex 28

Title: Materials data sheets

Pages total: 32, excl this cover page

**High temperature packing****Basic/material**

E-glass.

**Description**

The basic material of the packing consists of 6-9 micron E-glass fiber strands, which are textured. The product is inorganic, sterile, refractory, and contains no toxins or heavy metals.

Thanks to a high-temperature treatment, the packing can be used up to 650 °C.

This treatment makes the packing retain its flexibility even with high temperature effects. At the same time, the black coating binds the loose fibers, and the packing retains its color throughout its lifetime.

# ROBAX® Glass Ceramic Panels

## 1. Description, Range of Application and Validity

### 1.1 Description

ROBAX® glass ceramic panels consist of a transparent glass ceramic material. Because of its material characteristics the product is designed for the use as thermal window in fireplaces. Other technical applications and shapes have to be proved separately.

### 1.2 Range of Application

This technical delivery specification applies to ROBAX® glass ceramic panels (delivery form: flat stock-size sheets, cut-to-size-panels and bent panels) for applications which require a low thermal expansion and transparency:

- electric, oil or gas stoves
- conventional heated fireplaces and room heaters (wood, coal, pellets, ...)
- baking ovens
- special applications on request

### 1.3 Range of Validity

This technical delivery specification applies to the commercial relationship between the Business Unit Home Tech and its customers.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 2. Technical Features

### 2.1 General Remarks

All data stated in this technical delivery specification are to be seen as guideline values.

Those values, for which no generally valid measuring method exist or which are not generally defined (e.g. by a technical standard), are specified and explained.

### 2.2 Appearance

- Transparent, slightly coloured due to the material composition and production process
- Surface appearance: plane, slightly textured due to the production process

### 2.3 Mechanical Characteristics

#### 2.3.1 Density

|        |                                 |
|--------|---------------------------------|
| $\rho$ | approx. 2.6 g / cm <sup>3</sup> |
|--------|---------------------------------|

#### 2.3.2 Modulus of Elasticity

|   |                              |
|---|------------------------------|
| E | approx. $93 \times 10^3$ MPa |
|---|------------------------------|

#### 2.3.3 Poisson's Ratio

|       |              |
|-------|--------------|
| $\mu$ | approx. 0.25 |
|-------|--------------|

#### 2.3.4 Bending Strength

The bending strength testing is to be accomplished according to DIN EN 1288 part 5 (R45).

|                     |                |
|---------------------|----------------|
| $\bar{\sigma}_{bB}$ | approx. 35 MPa |
|---------------------|----------------|

#### 2.3.5 Impact Resistance

The impact resistance of ROBAX® depends on the kind of installation, the size and thickness of the panel, the kind of impact, the geometry of the panel and especially here on the drilled holes and their position on the ROBAX® panel.

Therefore information regarding the impact resistance can only be given with knowledge of the respective application (especially in combination with the technical standards regarding impact resistance that have to be met for single applications). Corresponding guideline values on request.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 2.4 Thermal Characteristics

### 2.4.1 Coefficient of Mean Linear Expansion

$\alpha_{(20 - 700^\circ\text{C})}$   $(0 \pm 0.5) \times 10^{-6} / \text{K}$

### 2.4.2 Mean Specific Thermal Capacity

$C_p(20 - 100^\circ\text{C})$  approx.  $0.8 \times 10^3 \text{ J} / (\text{kg} \cdot \text{K})$

### 2.4.3 Thermal Conductivity

$\lambda_{(90^\circ\text{C})}$  approx.  $1.6 \text{ W} / (\text{m} \cdot \text{K})$

### 2.4.4 Resistance to Temperature Differences (RTD)

Resistance of the panel to temperature differences between heated zone and cold panel edge (room temperature).

No cracking due to thermal stress at  $T_{es, max}^{1)}$   $\leq 700^\circ\text{C}$

### 2.4.5 Thermal Shock Resistance

Resistance of the panel to thermal shock when the hot panel is quenched with cold water (room temperature).

No cracking due to thermal stress at  $T_{es, max}^{1)}$   $\leq 700^\circ\text{C}$

### 2.4.6 Temperature / Time Load Capacity

(under consideration of items 2.4.4 and 2.4.5)

The temperature / time load capacity specifies the maximum permissible temperature for given load times for the fireplace panels, below which no cracking due to thermal stress occurs.

The value pairs specified in the following table 2.1 are relevant to the practical use of the glass ceramic material as fireplace panel. The temperature values refer to the hottest point on the exterior side of the panel ( $T_{es, max}$ ) because this temperature can be measured more easily and more reliably.

<sup>1)</sup>  $T_{es, max}$ : Maximum temperature on the exterior side of the panel, that means the reverse side of the heat source, at the hottest point

# ROBAX® Glass Ceramic Panels

| Load temperature $T_{es, max}^1)$ | Load time |
|-----------------------------------|-----------|
| 560°C (1040°F)                    | 5000 hr   |
| 610°C (1130°F)                    | 1000 hr   |
| 660°C (1220°F)                    | 100 hr    |
| 710°C (1310°F)                    | 10 hr     |
| 760°C (1400°F)                    | 5 hr      |

Table 2.1: Temperature / time load capacity for ROBAX® panels

**Note:**

For ROBAX® fireplace panels the temperature / time load capacity specified in table 2.1 must be maintained. It must be ensured that this temperature / time load capacity is not exceeded during use, to prevent cracking due to thermal stress.

The temperature / time load data for even temperature distributions within an entire glass ceramic panel (e.g. homogeneous heating conditions in a testing furnace) are given in table 2.2. This data is to be seen purely as characteristic data for the glass ceramic material itself. It is not typical for use of the glass ceramic material as fireplace panels, which have a temperature distribution totally different from evenness. The temperatures refer to the homogeneous heating of the ROBAX® panel ( $T_{hom}$ ).

| Load temperature $T_{hom}^2)$ | Load time |
|-------------------------------|-----------|
| 700°C (1292°F)                | 6000 hr   |
| 750°C (1382°F)                | 750 hr    |
| 775°C (1427°F)                | 275 hr    |
| 800°C (1472°F)                | 100 hr    |
| 825°C (1517°F)                | 35 hr     |

Table 2.2: Temperature / time load capacity for uniformly heated ROBAX® panels

<sup>1)</sup>  $T_{es, max}$ : Maximum temperature on the exterior side of the panel, that means the reverse side of the heat source, at the hottest point

<sup>2)</sup>  $T_{hom}$ : Homogenous temperature, i.e. material temperature under homogeneous heating conditions

# ROBAX® Glass Ceramic Panels

## 2.5 Chemical Characteristics of Base Material

### 2.5.1 Acid Resistance

DIN 12116 at least class S3

### 2.5.2 Alkaline Resistance

based on ISO 695 at least class A2

### 2.5.3 Hydrolytic Class

DIN ISO 719 class HGB 1

### 2.5.4 Change of Surface due to Use

ROBAX® has a good resistance against chemical surface attack. In isolated cases and under special critical conditions, e.g. aggressive exhaust gases (acidification at high temperatures) changes of the surface may occur. For such applications practice tests have to be carried out before being used.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

### 3. General Dimensional Tolerances and Material Characteristics

The following describes characteristics which are valid for all four product groups (stock-size sheets, cut-to-size panels, round bent and angular bent panels). With regard to stock-size sheets all of the following characteristics (with exception of flatness, see item 4.1) refer to the net-size as agreed on with the customer.

#### 3.1 Dimensional Tolerances

| Characteristics / Areas / Location                | Tolerance            |
|---|----------------------|
| Thickness $t$<br>$t = 3.0 / 4.0 / 5.0 \text{ mm}$ | $\pm 0.2 \text{ mm}$ |

Table 3.1: Dimensional tolerances

#### 3.2 Material Characteristics

Visual inspection in the normal installation position without visual aids and illumination of approx. 800 Lux when viewed from a minimum distance of 1 m.

The inspection shall be executed with a background in the colour of fireclay bricks:  
Light ivory RAL-1015.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 3.2.1 Bubbles

Bubbles are gaseous inclusions within the glass ceramic material. Closed bubbles can appear as low-spots on the surface depending on their size and position within the glass. Open bubbles are open towards the panel surface and are not permissible if bigger than 1 mm. The production of material totally free of bubbles is not possible due to the production process. Table 3.2 contains the permissible number of closed bubbles in dependence of their length and the panel size.

| Characteristic's Length $L$ [mm] | Panel Size A             |  |  |   |
|----------------------------------|--------------------------|--|--|---|
|                                  | $A \leq 20 \text{ dm}^2$ | $20 \text{ dm}^2 < A \leq 40 \text{ dm}^2$ | $40 \text{ dm}^2 < A \leq 80 \text{ dm}^2$ | $80 \text{ dm}^2 < A \leq 150 \text{ dm}^2$ |
| $L \leq 1.0$                     | unconsidered             | unconsidered                               | unconsidered                               | unconsidered                                |
| $1.0 < L \leq 2.0$               | 2 <sup>1)</sup>          | 6 <sup>1)</sup>                            | 12 <sup>1)</sup>                           | 33  |
| $2.0 < L \leq 4.0$               | 1 <sup>1)</sup>          | 2 <sup>1)</sup>                            | 4 <sup>1)</sup>                            | 20  |
| $4.0 < L \leq 8.0$               | 0                        | 0  | 0  | 13  |
| $8.0 < L$                        | 0                        | 0  | 0  | 0   |

<sup>1)</sup> The distance between two adjacent characteristics must be minimum 200 mm.

Table 3.2: Permissible number of closed bubbles per panel

## 3.2.2 Solid Inclusions and Stains

Solid inclusions are inhomogeneities within the glass ceramic material. Stains are deviations of the surface which are easily visible under normal inspection conditions. Both characteristics cannot be completely avoided due to the production process. Table 3.3 contains the permissible number of solid inclusions and stains in dependence of their length and the panel size.

| Characteristic's Length $L$ [mm] | Panel Size A             |  |  |   |
|----------------------------------|--------------------------|--|--|---|
|                                  | $A \leq 20 \text{ dm}^2$ | $20 \text{ dm}^2 < A \leq 40 \text{ dm}^2$ | $40 \text{ dm}^2 < A \leq 80 \text{ dm}^2$ | $80 \text{ dm}^2 < A \leq 150 \text{ dm}^2$ |
| $L \leq 0.5$                     | unconsidered             | unconsidered                               | unconsidered                               | unconsidered                                |
| $0.5 < L \leq 2.0$               | 0                        | 3 <sup>1)</sup>                            | 6 <sup>1)</sup>                            | 30  |
| $2.0 < L \leq 4.0$               | 0                        | 0  | 1 <sup>1)</sup>                            | 3   |
| $4.0 < L$                        | 0                        | 0  | 0  | 0   |

<sup>1)</sup> The distance between two adjacent characteristics must be minimum 200 mm.

Table 3.3: Permissible number of solid inclusions and stains per panel

registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

### 3.2.3 Scratches

The delivery of ROBAX® panels totally free of scratches is not possible due to technical reasons. It has to be distinguished between slight scratches (scratches not detectable with finger nail) and strong scratches (scratches detectable with finger nail). Table 3.4 contains the permissible number of scratches in dependence of their length and the panel size.

| Characteristic's Length $L$ [mm]                    | Panel Size A                    |  |  |   |
|---|---------------------------------|--|--|---|
|   | $A \leq 20 \text{ dm}^2$        | $20 \text{ dm}^2 < A \leq 40 \text{ dm}^2$ | $40 \text{ dm}^2 < A \leq 80 \text{ dm}^2$ | $80 \text{ dm}^2 < A \leq 150 \text{ dm}^2$ |

<sup>1)</sup> The distance between two adjacent characteristics must be minimum 200 mm.

Table 3.4: Permissible number of scratches per panel

### 3.2.4 Pits

ROBAX® panels may show pits. These pits must not be recognizable during a visual inspection according to the conditions for visual inspections as described in item 3.2.

### 3.2.5 Other Characteristics

If the panel - when inspected according to the conditions for visual inspections as described in item 3.2 - shows a number of defects which impair the aesthetic appearance SCHOTT and the customer will agree on limit values for the respective characteristics and, if necessary, limit samples will be defined.

# ROBAX® Glass Ceramic Panels

## 4. Stock-Size Sheets

Stock-size sheets are large-size glass ceramic panels without any further processing, especially without edge processing. They serve as base material for cut-to-size panels.

### 4.1 Dimensional Tolerances

| Characteristics / Areas / Location     | Tolerance  |
|--|--|
| <b>Edge length of stock-size sheet</b> | Usable length: at least 1580 mm<br>Usable width: at least 840 mm                     |
| <b>Flatness of stock-size sheet</b>    | Flatness $\leq 0.3 \% \times$ measuring length<br>(Measuring length at least 500 mm) |

Table 4.1: Dimensional tolerances for stock-size sheets

### 4.2 Material Characteristics

The material characteristics comply with the specifications of item 3.2, incl. subitems.

## 5.2 Edge Finish

The edges of flat cut-to-size panels are processed according to DIN 1249, e.g. either arrissed or round ground to size.

ROBAX® panels may show small chippings at the edges. The maximum permissible size of these chippings is 1.5 mm when measured from the outer edge of the panel.

ROBAX® panels with V-shaped edge defects are not permissible.

## 5.3 Material Characteristics

The material characteristics comply with the specifications of item 3.2, incl. subitems.

| Permissible overall torsion $s_T$ [mm] | 2.5                      | 4  | 5                     |

Table 6.2: Permissible overall torsion of round bent panels (see also fig. 6.1)

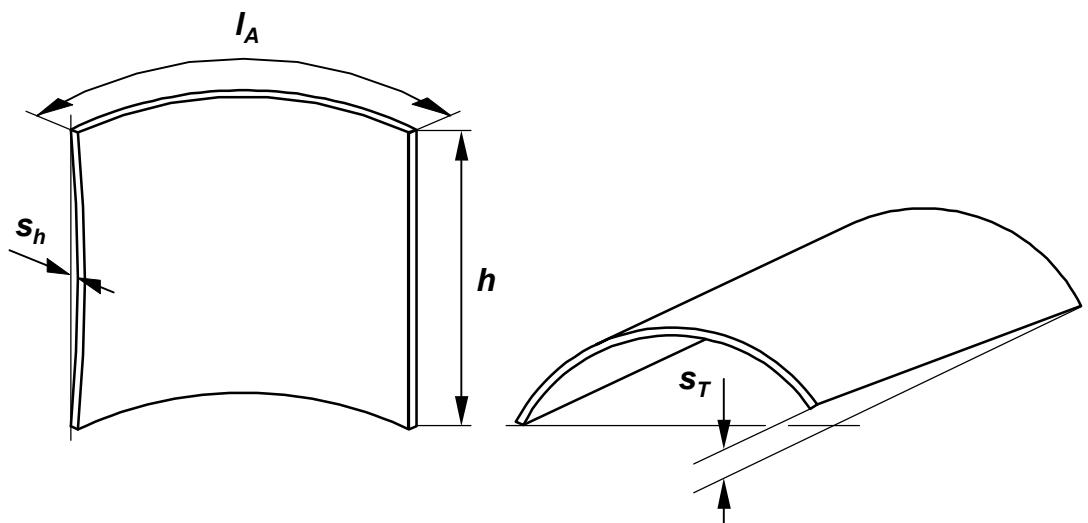

Fig. 6.1: Round bent ROBAX® panels

All geometric tolerances are specified by means of a two-dimensional enveloping contour. For testing the geometric tolerances a flat plastic gauge with a defined contour slot is used. The geometry of the contour slot is determined by the radius of curvature of the panel  $R_{soll}$ , by the arc length  $I_A$  and by the tolerance of the contour slot widths  $s_i$ ,  $s_a$  (see fig. 6.2). If required the drawing of the contour slot gauge can be provided for the customer.

## 7.2 Material Characteristics

The material characteristics comply with the specifications of item 3.2, incl. subitems.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 8. Transport, Storage and Handling

To avoid damage, it is necessary for the panels to be handled properly as well as transported and stored only vertically secured, and protected against touching each other by suitable intermediate layers (paper, cardboard, cork or PE foamfoils).

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 9. Installation Guidelines

The same conditions apply to the installation and the handling of ROBAX® panels as are generally valid for handling glass and glass ceramic parts.

- The **different thermal expansion** between the various frame materials and the ROBAX® panel has to be taken into account for the complete construction. Furthermore the possible production tolerances of frame and panel have to be considered.
- For installation it is necessary to use a sufficiently **low distortion frame construction**. As a minimal distortion of the frame construction cannot be excluded a **temperature stable, permanently resilient gasket** (e.g. fibre glass cloth or mineral fibre cloth) is required in order to prevent any transfer of distortions from the frame construction onto the ROBAX® panel. Any direct contact between glass ceramics and metal has to be avoided.
- If for constructive reasons a pressing of the panel in the frame is required the **contact pressure must be applied uniformly (never at points only)** over the entire edge area of the panel.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 10. Procedures if Deviations Occur

### 10.1 Basic Action

Deviations should be handled in the most cost-effective manner for both partners. Deviations are estimated according to the state of the products at time of delivery. Changes in the material which occur during further processing of ROBAX® glass ceramic panels exclude warranty claims of the recipient against SCHOTT.

### 10.2 Obligation of Recipient to Provide Information

SCHOTT requires the following data for reporting, testing and evaluating deviations:

- SCHOTT order number
- Pallet voucher with production order number
- Warehouse unit number
- Delivery quantity affected
- Complaint quantity with article number
- Reasons for complaint
- Results of random sample tests

### 10.3 Recipient's Storage Obligation

All parts with characteristic values deviating from the specifications and complained about by the recipient must be stored by the recipient until final clarification of the facts and made available to SCHOTT upon request. If such parts are scrapped by the recipient without written authorization from SCHOTT or if they are no longer available for other reasons, all warranty rights regarding such parts shall be null and void.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

**Round packing with or without core****Basic/material**

E-glass.

**Description**

The basic material consists of 6-9 micron E-glass fiber yarns which are texturized.

The product is inorganic, sterile, refractory, and contains no toxins or heavy metals. It is a knitted glass fiber packing – with or without core – made of E-glass.

It is a heavy packing, so you get a more stable packing, e.g. for wood-burning stove doors. The packing is suitable as a door seal in stoves and sealing flues.

**Dimensions and technical data**

|               |                  |
|---------------|------------------|
| Dimensions:   | Ø 3-50 mm        |
| Length:       | 50/100 mm        |
| Temperature:  | 550 °C           |
| Colour:       | White / Antracit |
| Application:  | Packing/seal     |
| Flammability: | Inflammable      |

**Basic/material**

E-glass.

**Description**

The basic material consists of 6-9 micron E-glass fiber yarns which are texturized.

The product is inorganic, sterile, refractory, and contains no toxins or heavy metals.

A knitted fiberglass tape has a great packing surface – with less packing thickness. This makes the tape suitable for packing glass in stoves, where usually there is no room for a round seal.

A ladder tape is a knitted fiberglass tape with a ladder in the middle. That is, on the middle, there are only transverse strands.

This makes it particularly suitable for packing of the glass in the stove, as the tape packs on both sides simultaneously.

The packing is available with self-adhesive tape for easy installation.

**Dimensions and technical data**

Dimension: 8x2 mm - 25x3 mm

Length: 50 / 100 mm

Temperature: 550 °C

Colour: Antracit

Tape: Yes

Application: Packing / sealing

Flammability: Inflammable

## INSULFRAX LTX BLANKET

### Description

Insulfrax® LTX™ Blankets are the latest addition to the Insulfrax product family. Insulfrax LTX offers the same benefits as previous Insulfrax blankets, now with physical properties enhanced to improve both thermal performance and handling. These lightweight needled blankets combine innovative proprietary technology with Insulfrax proven performance to create the best low-biopersistent Insulfrax blanket available from Insulcon today. Insulfrax LTX blankets are manufactured from alkaline earth silicate (AES) wool, and provide effective solutions to a variety of thermal management challenges.

The new Insulfrax LTX products can help customers reduce costs. The enhanced LTX fibre performance helps companies reduce their energy costs and meet increasingly strict carbon emission targets, without increasing the amount of insulation required. Alternatively, customers can save on material costs by using less insulation to achieve the same performance as standard AES blankets. Customers can save money by reducing their lining thickness up to 25%, freeing up valuable space in furnaces and ovens.

Insulfrax LTX Blankets are completely inorganic and binder free with an improved, smoother surface finish. Insulfrax LTX Blankets retain their strength, flexibility and thermal properties in many working environments without the generation of smoke or fumes. These new blankets are less dusty, which makes handling and cutting the material easier, resulting in faster installation of the product onsite and, in some cases, reduced waste of material. Insulfrax LTX Blankets are also printed on the surface of the blanket, which makes installation tracking and inspection on the job site or in the fabrication shop easier.

Available in a range of density and thickness combinations, Insulfrax LTX Blankets can be used in a wide variety of applications and are especially suited for use as high-temperature gaskets, wraps and heat shields.

### General Characteristics

Insulfrax LTX Blanket products have the following outstanding characteristics:

- Exceptional insulating properties
- High temperature stability (up to 1200°C)
- Resistance to thermal shock
- High tensile strength & resiliency
- Lightweight
- Excellent flexibility
- Good acoustic properties

### Typical Applications

Insulfrax LTX Blankets are the next generation of low biopersistent Insulfrax fiber and the product of choice for a wide range of applications in a number of industries including:

#### **Appliances**

- Residential self-cleaning ovens
- High-temperature commercial cooking appliances

#### **Hearth Products**

- Chimney Insulation

## INSULFRAX LTX BLANKET

\* The maximum continuous use limit temperature for these products depends upon operating and application conditions, and also the engineered design of the insulation lining. For additional information and support regarding product performance or to identify the recommended product for your application, please contact your nearest Insulfrax Application Engineering office.

Data shown is based on average results of tests conducted under standard procedures and are subject to variation. Results should not be used for specification purposes.

## Optional Accessories

A wide range of accessories (such as handling gloves, fireside tools, glass cleaner and heat-proof paint) are available for use with your Morsø stove. They help with day-to-day running and maintenance. Contact your Morsø dealer for more information.

The Morsø 2B Classic 2020 has been certified by PFS TECO. The test standards are UL-1482-2011 (R2015) for the United States and ULC-S628-93 (R2016) for Canada.

**The stove is listed for burning wood only. Do not burn other fuels.**

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certified to comply with 2020 particulate emission standards using cord wood.

Average particulate emission using ASTM E3053-17 cord wood test method is 0.47 g/h. Under specific test conditions this heater has been shown to deliver heat at rates ranging from 9,037 to 31,988 Btu/hr.

This appliance was determined to have an average higher heating efficiency value of 80.1% when tested in accordance with CSA B415.1

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

We suggest that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

## Cast iron

Cast iron is a live material. There are no two ovens that are identical. This is partly due to the tolerances of the casting process, partly because the ovens are a work of craftsmanship. Minor unevennesses may also occur in the cast iron surface.

## 1.0 Installation of your Morsø stove

Installation of woodburning stoves must be safe and legal.

If your Morsø stove is not installed correctly, it may cause a house fire. To reduce the risk of fire, the installation instructions must be followed carefully. Contact the local building officials about restrictions and installation inspection in your area.

**Before you start installing your stove, make sure that:**

- The stove and chimney connection are placed far enough from combustible materials to meet all clearance requirements.
- The floor protection must be adequate and must be made correctly according to the requirements.

All necessary approvals are needed from the local building officials.

The data plate, which is located on the back of the stove, provides information regarding safety testing information, name of certified testing laboratory, and installation requirements.

Installation requirements vary in different districts, and the local building officials have the final authorization to approve your installation. You should discuss the installation with them before beginning. Please ask your dealer for further information.

**Do not connect to any air distribution duct or system.**

**Important: If the installation instructions are not followed carefully, it may cause dangerous situations like chimney - and house fires. Follow the instructions carefully and do not deviate from them as it may cause injuries to people or property.**

### 1.1 Unpacking the stove

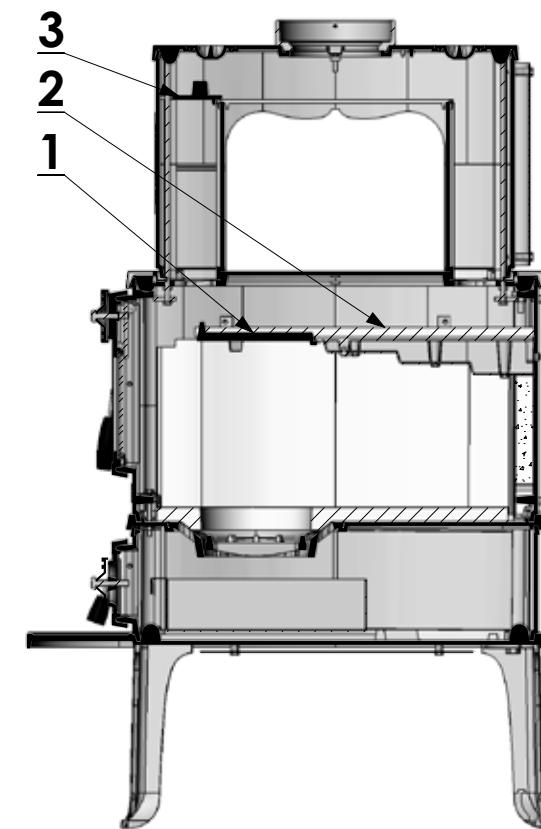

2B Classic: After removing the outer packaging, flatten it and lay onto the floor close to the stove; this can then act as protective work surface during the assembly process.

Next, remove the legs and bolts from inside the stove. Gently lay the stove onto its back and unscrew it from the wooden pallet. Using the bolts supplied, now screw the legs into position on the underside of the base. The stove should now be lifted and moved into the upright position, avoiding excess load on the back legs.

### 1.2 Checking loose parts in the stove

After unpacking, check that the fire bricks are firmly in position and have not shifted in transit. Check also that the air control works freely.

Before starting the initial fire, make sure that the baffle (1) and insulation (2) over the baffle are placed correctly, as shown on the images below. Also check that the cover (3) identification number 2118 are placed correctly.

### **How to fit the Smoke Cover**

Place the smoke cover by the smoke vent in front of the stove. This is easily done by leading the smoke cover down through the flue collar before fitting the pipe. It is also possible to fit the smoke cover through the access door opening. See pictures below.

### **How to fit the Vertical Baffle**

Lead the vertical baffle through the door as shown below (picture 1 & 2). Place the baffle into the right position (picture 3 & 4). The baffle insulation is placed on the baffle.

### **Standard Accessories**

A Morsø glove and ceramic flue connection gasket are standard accessories that usually can be found in the ashpan or firebox area.

### 1.3 The chimney / flue system

Note that the flue system must be independently secured and must not rely on the stove for support.

**The stove must not be connected to a chimney flue serving any other appliance. (Several flues may run up a single chimney stack; use one flueway per appliance).**

Use a residential type masonry or listed type HT factory-built chimney.

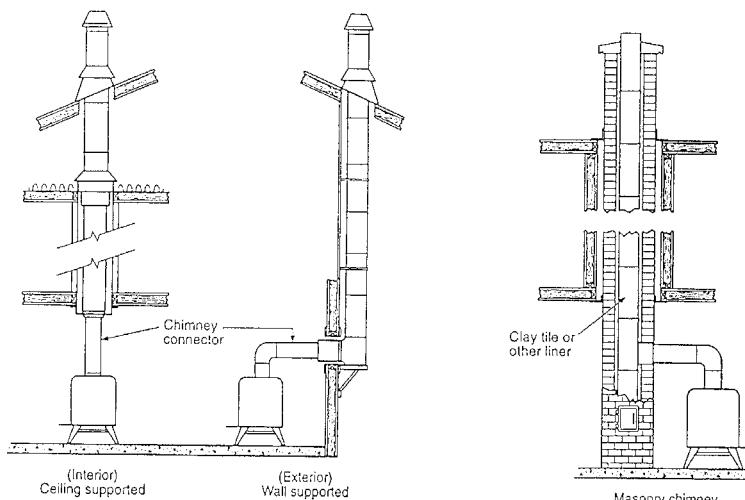

High Temperature (H.T.) Chimney Standard UL-103-1985 (2100° F.) or a code-approved masonry chimney with flue liner for the USA, and High Temperature (650°C) Standard ULC S-629 for Canada.

The internal dimensions of the chimney connector and chimney must not be less than 6 inches diameter (or equivalent cross section), and should not be significantly larger than this. Too large a section will tend to allow the flue gases to cool excessively, causing sluggishness or unpredictability in the stove's performance.

We recommend the length of the chimney system should be at least 16 feet (not required) above the stove in normal domestic situations, measured from the flue collar to the top of the chimney.

Local conditions like for example - roof constructions, large trees nearby and high altitude, may influence the chimney draft and height. Therefore, contact the local professional chimney sweep or your Morsø dealer.

**Typical Factory-Built or Masonry Chimney Installations**

### 1.4 Flue Connection

A flue collar is placed in the firebox area.

Use a 24 MSG black or blue chimney connector or listed double wall chimney connector. Refer to local codes and the chimney manufacturer's instructions for precautions required for passing a chimney through a combustible wall or ceiling. Remember to secure the chimney connector with a minimum of three screws to the product and to each adjoining section. Position the stove and connect to the flue system.

**Wear gloves and protective eyewear when drilling, cutting or joining sections of chimney connector.**

### 1.5 Connection to the existing chimney

A chimney connector is the double-wall or single-wall pipe that connects the stove to the chimney. The chimney itself is the masonry or prefabricated structure that encloses the flue. Chimney connectors are used only to connect the stove to the chimney.

Double-wall connectors must be tested and listed for use with solid-fuel burning appliances. Single-wall connectors should be made of 24 gauge or heavier gauge steel. Do not use galvanized connector; it cannot withstand the high-temperatures that smoke and exhaust gases can reach, and may release toxic fumes under high heat. The connector must be 6 inches (150mm) in diameter.

**If possible, do not pass the chimney connector through a combustible wall or ceiling. If passage through a combustible wall is unavoidable, refer to the sections on Wall Pass-Throughs. Do not pass the connector through an attic, a closet or similar concealed space when installing the chimney connectors.**

It is important to keep the flue gases moving smoothly in the right direction. Do not vent into a large void at this location; rather form one continuous section all the way up. Use mild bends (e.g. 45° vs. 90°) rather than sharp angles where a change of direction is required. All parts of the venting must be accessible for cleaning purposes.

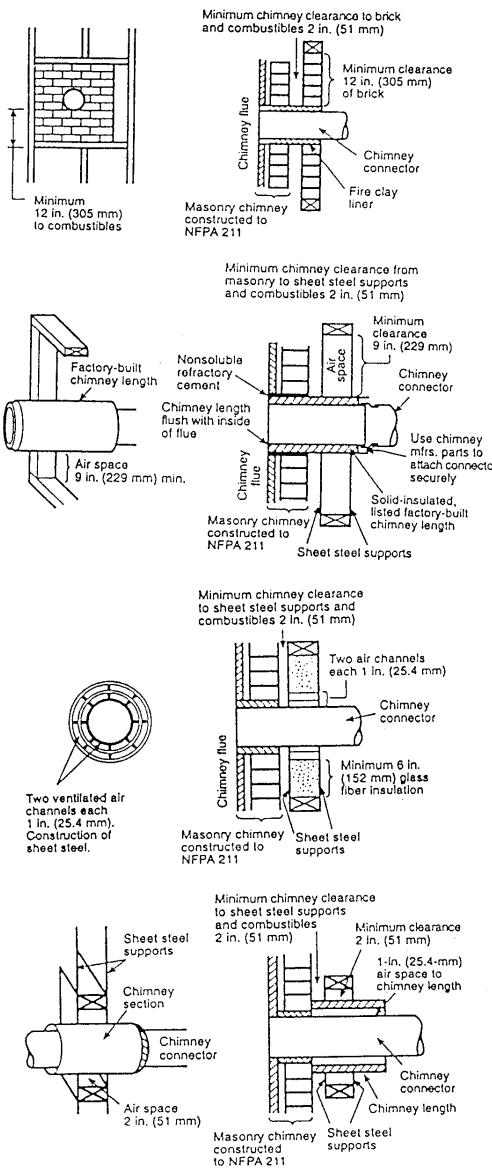

In horizontal runs of chimney, maintain a distance of 18 inches from the ceiling. Keep it as short and direct as possible, with no more than two 90 degree turns. Slope horizontal runs of connector upward 1/4 inch per foot (20 mm per metre) going from the stove toward the chimney. The recommended maximum length of a horizontal run is 3 feet (1 metre), and the total length should be no longer than 8 feet (2.5 metres).

Information on assembling and installing connectors is provided by the manufacturer's instructions exactly as you assemble the connector and attach it to the stove and chimney.

**Be sure the installed stove and chimney connector are correct distances from near by combustible materials. See the clearance paragraph page 11.**

Where passage through a wall or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365.

## Chimney Connector Systems and Clearances from Combustible Walls for Residential Heating Appliances

## 1.6 Positioning the stove

### Distance to walls and lintel

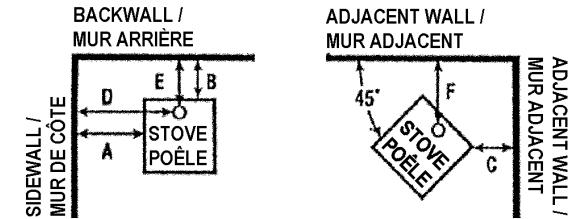

When the stove is positioned near combustible materials, observe all current local and national building regulations with regards to clearances. Whatever regulations apply to your area, do not in any case install the stove within 8 inches of combustible materials around the sides or 16 inches above the top of the stove (fireplace installations require greater clearances above the stove - see below in the clearance chart). These distances may need to be increased if the materials are sensitive to heat. Note also that wall paper and other decorative materials may become detached with the effects of heat and care should be taken to ensure that they do not fall towards the stove in such an event.

When the stove is positioned near non-combustible materials, a gap of 4 inches or more is recommended for cleaning purposes and to ensure that heat circulates around the stove and out into the room.

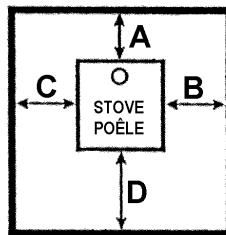

### Clearance requirements for 2B Classic (Singlewall connector)

| CLEARANCE REQUIREMENTS     | STANDARD RESIDENTIAL INSTALLATION<br>(SINGLEWALL CONNECTOR) |              |
|----------------------------|---|--------------|
|                            | USA   | CANADA       |
| A. Sidewall to unit        | 26"   | 26" (660 mm) |
| B. Backwall to unit        | 7"  | 7" (178 mm)  |
| C. Cornerwall to unit      | 22"   | 22" (559 mm) |
| D. Sidewall to connector   | 29"   | 29" (737 mm) |
| E. Backwall to connector   | 15"   | 15" (381 mm) |
| F. Cornerwall to connector | 29"   | 29" (737 mm) |
| G. Unit to ceiling         | -   | -            |
| H. Floor to ceiling        | -   | -            |

### MINIMUM CLEARANCES TO COMBUSTIBLES: DEGAGEMENTS MINIMAUX AUX MATERIAUX COMBUSTIBLES:

NON-COMBUSTIBLE FLOOR PROTECTOR:  
PROTECTEUR DE PLANCHER INCOMBUSTIBLE

FLOOR PROTECTOR MUST BE NON-COMBUSTIBLE MATERIAL. IT MUST EXTEND BENEATH HEATER, AND TO THE FRONT/SIDES/REAR AS INDICATED.

LE PROTECTEUR DE PLANCHER DOIT ÊTRE D'UN MÉTÉRIAL INCOMBUSTIBLE. IL DOIT S'ÉTENDRE EN DESSOUS DE L'APPAREIL ET AU DEVANT, AUX CÔTÉS ET À L'ARRIÈRE DE L'APPAREIL COMME INDICUÉ.

| Floor protection requirements     | Non-combustible materials beneath stove |        |
|-----------------------------------|---|--------|
|                                   | USA                                     | Canada |
| A. Extending distance, back       | -                                       | 200 mm |
| B. Extending distance, right side | 6"                                      | 200 mm |
| C. Extending distance, left side  | 6"                                      | 200 mm |
| D. Extending distance, front      | 16"                                     | 450 mm |

In the US, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 16" to the front and 8" to the sides of the fuel loading door and ash removal openings. In Canada, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 450 mm.(16") to any side with a door and 200 mm.(8") beyond the appliance on the other sides.

#### Distance to furniture

The recommended minimum distance from stove to furniture is 30 inches. Note that some furniture is more easily affected by heat and may need to be moved to a greater distance. This is your responsibility.

In addition other combustible materials, away from the stove. In general, a distance of 30 inches must be maintained between the stove and moveable combustible item such as drying clothes, newspapers, firewood etc.

#### DO NOT INSTALL IN A MOBILE HOME

#### Note:

##### Acid Protection

If acid-washing the masonry around the stove, protect the stove surface with an acid-proof cover.

##### Fresh Air Inlet

Unless there is deemed to be sufficient ambient leakage of air into the room via doorways, windows and the like, a dedicated fresh air inlet will be needed. This inlet should have 2 square inches (1250 square mm) of free air space. This is particularly important where the room is well sealed, or where an extractor hood or ventilation system disturbs the natural air pressure. Such an inlet should not be on a wall that is usually subject to negative pressure from normal wind pattern. Avoid placing the inlet directly across the room from the stove, thus causing a cold air draft.

## 2.0 Operation

### 2.1 Before you start firing

For use with solid wood fuel only.

Do not overfire; if heater or chimney connector glows, you are overfiring.

Inspect and clean chimney frequently. Under certain conditions of use, creosote buildup may occur rapidly. Because of risk of smoke and flame spillage, operate only with door fully closed.

#### Caution:

Hot while in operation.

Keep children, clothing and furniture away.

Contact may cause skin burns.

Do not use chemicals or fluids to start the fire.

Do not burn garbage or flammable fluids.

Do not use gasoline, gasoline-type lantern fuel, kerosene, charcoal lighter or fluid or similar liquids to start or freshen up a fire in this heater. Keep all such liquids away from the heater while it is in use.

#### Choosing your fuel

All types of natural wood can be burned on your stove, but they must be well-seasoned and dry. Once the wood is cut to length, it should be split down middle - to suit the dimensions given below - to allow moisture to evaporate. Cut the wood to a length of max 12 inches (30cm) and approx. 3 to 3.5 inches (7-8 cm) in section. If you can weigh your wood, aim for around 2 lbs. For correct combustion and heat output, wood fuel should contain no more than 20% moisture; this can easily be checked by using the Morsø Moisture Meter (part no. 62929900)

To naturally season wood fuel, stack and store it under cover in an airy location where fresh air can move through each piece. Some soft woods may take as little as one good summer to season whereas harder woods such as oak, maple, and elm may require seasoning up to 18 months. Avoid overly dry wood that is gray in color as under certain conditions it can cause performance problems, such as back-puffing and sluggishness. Well seasoned wood will be light to hold and will show signs of cracking from the center-out in the ends. If your wood spits or sizzles when burnt, and your stove's door glass persistently mists up, your wood is not properly seasoned. Never use drift wood (from the sea), whose salt content may cause corrosion, nor construction wood that may have been impregnated with chemicals.

#### To optimize efficiency:

Burning wet wood has a negative impact on efficiency

**Caution: Do not place fuel within the installation clearances for the stove or within the space required for loading fuel and ash removal.**

#### Starting the First Fire

The initial fire should be small, so that the stove paint can cure and the main plates of the stove can settle into position. Some fumes will be given off by the paint. Ventilate the room during this phase. The setting of the air control, lighting techniques and loading intervals will depend on chimney draft, the fuel used, the heat required and so on. Some basic techniques are outlined below.

## In principle

Your stove is fitted with Primary and Secondary air inlets.

Primary Air is controlled using the spinner on the door. Open the spinner will allow a supply of preheated air to enter the firebox via the 'airwash' system situated inside the stove and above the glass.

The secondary air is injected into the flue gases above the fire resulting in a cleaner, more efficient combustion process. The supply of secondary air is fixed open and is not adjustable. For extra safety, your stove has been fitted with a removable handle on the frontdoor.

## 2.2 Lighting and loading intervals

When first lighting the stove, a large volume of air is needed. When the stove is cold, you should leave the door open an inch or two for the first few minutes and open the primary air supply completely. While the door is open, do not leave the stove unattended.

To form a reasonable bed of ash on the floor of the stove, you should use 2-4 pounds of dry kindling at the initial lighting. If possible, maintain a 1-1.5 inch (2-3 cm) layer of ash on the floor of the combustion chamber for added insulation.

1. We recommend using the "top-down" method to light your wood-burning stove. It is the most environmentally-friendly method of lighting. Use two firelighters and approx. 2-4 lbs of dry kindling sticks to quickly create a glowing layer of wood. Place the firelighters directly under the top layer of kindling sticks. This minimizes soot formation on the glass. Soot formation on the glass is often caused by too vigorous burning in contact with cold surfaces. If you avoid the formation of soot when lighting the fire and build up a layer of hot embers, you will have minimal soot formation when getting the fire burning again later.

2. The air supply must be fully open. Turn the spinner control 2 1/2 turns counterclockwise from closed position to fully open the primary air supply (See box on page 15 regarding closed position)

3. Light the fire.

4. After lighting, partially close the door, leaving it open an inch or two to allow in plenty of combustion air.

5. When the chimney is warm after about 5-10 minutes, the frontdoor should be closed. We recommend setting the spinner control at a minimum of 1-1 1/2 turns counterclockwise from closed position, when burning the kindling/start-up fuel. A suitable layer of embers will be formed after about 15-20 minutes.

6. When ready to reload, use a poker to spread the embers across the firebox floor, bringing plenty towards the front of the stove.

7. Refuelling of your stove should be done while there are still glowing embers in the bed. Spread the embers across the bottom, but concentrated mostly towards the front of the stove. We recommend using fuel load with a weight of 4 lbs (2 pieces) and up to 7 lbs (5 pieces).

**Always keep the fuel load beneath the lowest secondary air nozzles. The space in front of and above the lowest air nozzles is reserved for volatile gas combustion only.**

When refuelling your stove, it is recommended that you open the stove door gently for the first 1-2", then wait for a few seconds for the pressure in the flue to equalise; you are now safe to proceed and open it all the way. By using this technique smoke spillage can be eliminated particularly in poor chimney draft conditions. The stove door should not be opened when the stove is being fired vigorously.

8. Close the frontdoor. Turn the spinner control 2 1/2 turns counterclockwise from closed position to fully open the primary air supply  
The new fuel will ignite in a minute or two

9. After a few minutes, adjust the primary air supply to suit your heating requirements.  
If using the minimum low burn rate (spinner control closed) allow the fire to establish properly, by burning at medium burn rate for about 15 minutes beforehand. Turn the spinner control 1-1 1/2 turns counterclockwise from closed position to achieve a medium burn rate.

10. For refueling, add a layer of wood while there are still plenty of live embers, Repeat steps 6-9.

**This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.**

**When the spinner air controller is turned all the way down, closed position, there is still a small gap between the spinner and the door frame allowing for the minimum low burn rate. The manufacturer-set gap is 1 mm equal to 3/4 turn**

**Warning: Fireplace stoves must never be left unattended with the door open. If the door is left partly open, gas and flame may be drawn out of the fireplace stove opening, creating risks from both fire and smoke. We recommend that you fit a smoke detector in the room where the stove is installed.**

**DO NOT OVERFIRE THIS HEATER. Overfiring may cause a house fire, or can result in permanent damage to the stove. If any part of the stove glows, you are overfiring.**

The maximum recommended weight of wood fuel per load is 3.5 kg/7 lbs (approx 5 split logs).

Under normal firing, the average flue temperature in the stove pipe, measured 20 cm above the stove, is approx. 300° C (550°F). The maximum flue temperature in the stove pipe must not exceed 450° C (750°F). If the flue temperature exceeds 450°C (750°F), it is considered as over firing and may cause premature wear and tear of the stove.

To help gauge the correct running temperature of your stove, we recommend you use the Morsø Flue Gas Thermometer (part no. 62901200). The Flue Gas Thermometer magnetically attaches onto the stove pipe approx 20 cm (8") above the stove's top plate and measures the surface temperature of the stove pipe. Please see your authorized Morsø Dealer for availability.

#### Draft conditions

If smoke or fumes come out of your stove when lighting up and reloading, or if the fire simply will not respond, a poor draft is almost certainly to blame. (In a very few cases, there may be insufficient fresh air getting into the room - see installation advice above). Take advice from your stove supplier on how best to upgrade your flue system to improve draft.

#### Rules of woodburning

If you want less heat, put fewer logs on the stove and reduce the amount of air. It is still important to maintain a good layer of embers.

Less heat - less wood - less air

Greater heat - more wood - more air

Soot deposits will settle on the glass if the stove is run too slowly or if your wood is not well seasoned.

#### Carbon monoxide detectors

It is required in some jurisdictions to install smoke and carbon monoxide detectors where heaters are installed. Install at least one smoke detector on each floor of your home to ensure your safety. It should be located away from the wood appliance and close to the sleeping areas. Locating a smoke detector too close to a wood appliance can cause the smoke detector alarm to sound if a puff of smoke is emitted while the wood appliance door is open during reloading. Follow the smoke detector manufacturers placement, installation, and maintenance instructions

## 3.0 Maintenance

When performing maintenance on your stove, always protect yourself, using safety goggles and gloves

### 3.1 Exterior Maintenance

The stove surface is painted with heat-resistant Senotherm paint. It is best kept clean by vacuuming with a soft brush attachment or by wiping with a lint-free cloth.

Over a period of time, the painted surface may become slightly grey. A can of Morsø touch-up spray paint should be available from your stove supplier. This can be applied - in accordance with the instructions - in just a few minutes. When first firing after touching up, the stove will give off a slight smell as the paint cures. Make sure to ventilate the room well during this phase.

### 3.2 Internal maintenance

#### Glass

If the stove is generally run at the correct temperatures, there should be little or no dirt on the glass. If dirt does settle during lighting, most will burn off as temperatures increase. For heavier deposits that will not burn off, use Morsø glass cleaner, applied when the glass is cold, in accordance with the instructions. Never use abrasive cleaners on the glass surface.

#### Reasons for dirty glass

- Fuel too wet
- Logs too large or not split
- Combustion temperatures too low

**Replace broken glass immediately.**

**Do not operate your stove if the glass in the door is damaged.**

If you need to replace the glass, it should be replaced with the high temperature ceramic glass supplied by Morsø, contact your Morsø dealer.

**ALWAYS USE ORIGINAL MORSØ SPAREPARTS**

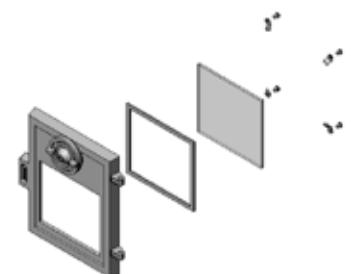

#### Installing the glass

Never install the glass when the stove is in function.

#### Ceramic glass replacement

Ceramic glass cannot be recycled because it has a higher melting point than ordinary glass. If ceramic glass is mixed with ordinary glass, the raw material is spoiled, and the reclaiming process may be halted. Take care that the ovenproof glass does not end up among ordinary recycled waste. That will be a great benefit to the environment.

Note: Should be handed in to a recycling station as ceramic glass.

1. Lift the door off the hinges and place it face down on a sheet of cardboard or other non-abrasive fabric.
2. Unscrew the 4 bolts that secure the glass. (In the event that a bolt sheers off when being unscrewed, remove the remaining body of the bolt by drilling down its centre with 1/8 inch high speed steel drill bit. Smaller drill bits may be successful, but do not use a larger bit. Make sure the bit stays away from the edges of the bolt - this may damage the thread in the cast iron).
3. Remove the old ceramic gaskets and clean up the surface underneath with wire wool or emery paper to remove loose particles.
4. Place the new gasket material in position around the perimeter of the window area, making sure to pinch them to the length in such a way that they make a continuous seal. Leave no gaps.
5. Place the new glass in position on the strips and screw home the fresh bolts and fitting by hand.
6. Finally, give each of the bolts an extra half turn or so. The glass should hold tight enough by that cleaning will not dislodge it. Do not over-tighten the bolts as this may put excessive pressure on the glass, resulting in cracking - important!

**To reduce the risk of breaking the glass, avoid striking the glass or slamming the door.**

#### **Internal service parts**

The flame-path equipment - consisting of the ashpan, grate, firebricks, Cast iron fire plates, glass, baffle and flue collar - are subject to the extremes of heat produced by the fire. From time to time, one or other of these parts may need replacing as a matter of routine maintenance.

#### **Stone replacement**

When replacing the stones, unscrew at the rear of the stove the heat reflector, which is mounted with 4 screws. This provides access to the 2 bolts that hold the smoke baffle in place. Remove these bolts so that the smoke baffle inside the stove can be raised. Raise the smoke baffle so that the old stones can be removed from the stove and the new ones can be installed. The side stones are placed in the grooves in the vermiculite bottom plate. Once the stones have been properly put into place, lower the smoke baffle down onto the stones and re-bolt it securely to the cast rear of the stove. Finally, reinstall the rear heat reflector with its 4 screws.

**NOTE: The flame-path equipment, the ceramic rope and the paint finish are not covered by guarantee.**

All of these service parts can be bought from your Morsø dealer, and we recommend that damaged parts are replaced as soon as possible to avoid collateral damage. Should the baffle be distorted by an overfire, the stove will still function, although its efficiency may be compromised. Replace it as soon as possible.

#### **Reasons for fast internal wear and tear**

- Persistent heavy firing
- Soot and ashes left to accumulate

#### **Gasket**

The gasket around the perimeter of the door may harden over a period of time. It should be replaced if it becomes difficult to close the doors or if air starts to leak in around the perimeter of the doors, causing the fire to become a little less controllable. A Morsø rope gasket kit is available from your stove supplier.

### **3.3 Cleaning the Stove and the Flue**

Check for soot above the baffle plate and around the flue outlet every month or so to start with. If the stove suddenly becomes sluggish, check for a soot fall around the flue collar or in the flue/chimney.

**The chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.**

Clean the flue/chimney - all the way from the stove to the flue terminal point above the house. A good routine is to clean the flue after each heating season in any case, and inspect prior to the season to ensure that bird's nests or other blockages have not occurred during the off season.

#### **Ash disposal**

Empty the ashpan on a daily basis or as needed. Ash allowed to build up towards the underside of the grate will trap heat and could cause premature failure of the grate.

#### **Empty the ashpan according to this procedure:**

Open the front door, and use a shovel or poker to stir excess ash through the ash slots in the grate down into the ash pan. Take out the ash pan, making sure to keep it level to avoid spilling ash.

Dispose the ash in a metal container with a tight fitting lid.

The closed container of ashes should be placed on a noncombustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

Return the ash pan to its original position in the stove, and close the door.

#### **Caution:**

**Never empty a stove in operation.**

**Never use your household or shop vacuum cleaner to remove ash from the stove; always remove and dispose of the ash properly.**

#### **Creosote - formation and need for removal**

When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapors condense in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited this creosote makes an extremely hot fire. When burning wood, the chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

### **Chimney sweeping**

Inspect the system regularly during the heating season as part of a regular maintenance schedule. To inspect the chimney, let the stove cool completely. Then, using a mirror, sight up through the flue collar into the chimney flue. If you cannot inspect the flue system in this fashion, the stove must be disconnected to provide better viewing access.

Clean the chimney using a brush the same size and shape as the flue liner. Run the brush up and down the liner, causing any deposits to fall to the bottom of the chimney where they can be removed through the clean-out door.

Clean the chimney connector disconnecting the sections, taking them outside, and removing any deposits with a stiff wire brush. Reinstall the connector sections after cleaning, being sure to secure the joints between individual sections with sheet metal screws.

If you cannot inspect or clean the chimney yourself, contact your local Morsø Dealer or a professional chimney sweep.

### **If you do experience a chimney fire, act promptly and:**

1. Close the air control.
2. Get everyone out of the house.
3. Call the Fire Department.

### **Annual maintenance**

Before the heating season, perform a thorough cleaning, inspection and repair:

Thoroughly clean the chimney and chimney connector.

Inspect the chimney for damage and deterioration. Replace weak sections of prefabricated chimney. Have a mason make repairs to a masonry chimney.

Inspect the chimney connector and replace any damaged sections.

Check gasketing for wear or compression, and replace if necessary.

Check the glass for cracking; replace if needed.

Check door and handle for tightness. Adjust if needed.

### **3.4 Leaving the stove for extended periods**

#### **Important:**

If the stove is to be left unused for any period of time, clean it out thoroughly and leave the air control slightly open to allow airflow. Make sure that the flue does not allow rainwater to come anywhere near the stove; install a chimney cap, but do not block off the flue completely.

These measures should ensure there is a slight movement of air through the stove, and that the body of the stove remains dry, right into the corners.

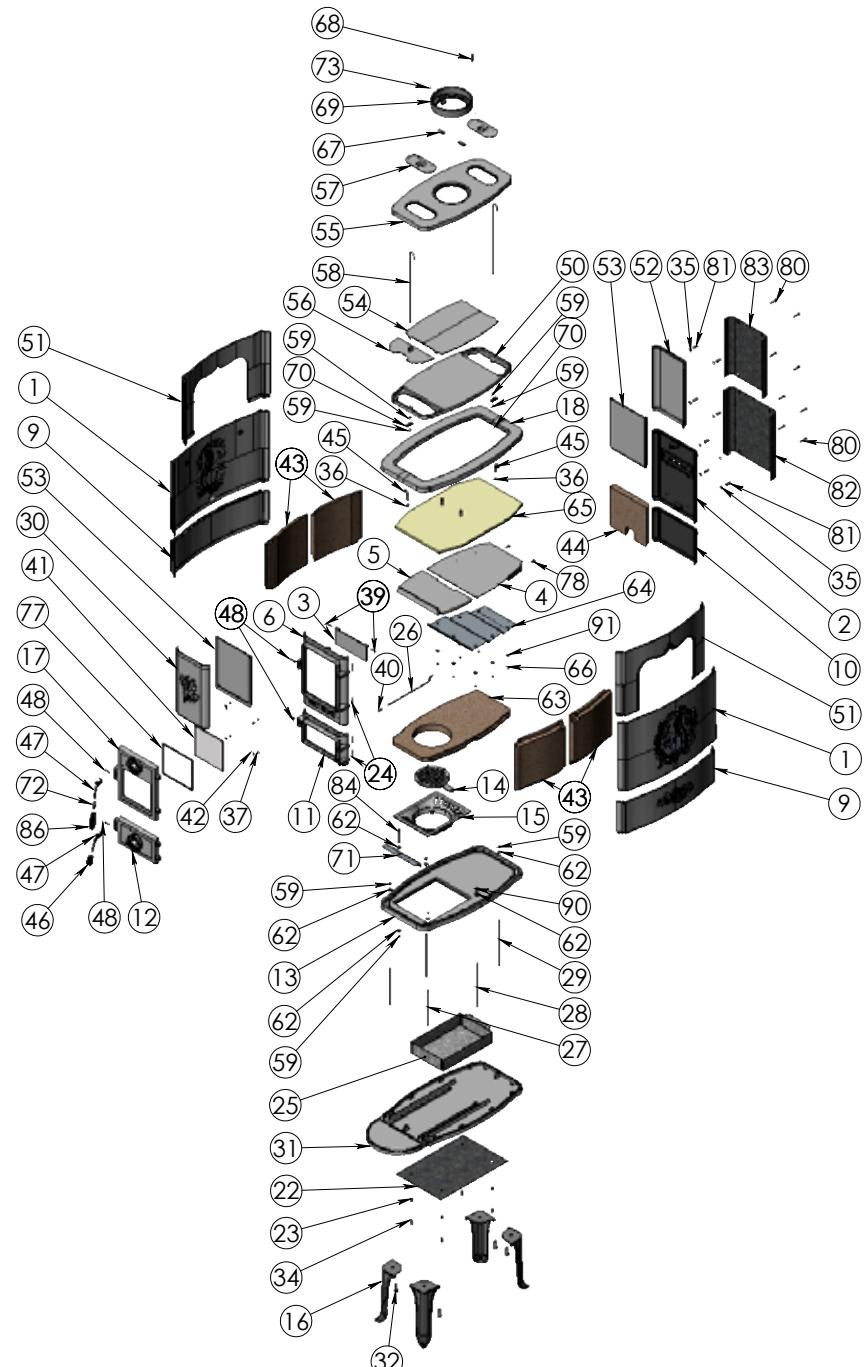

Any ash left within an unfired stove can attract moisture like blotting paper. If moisture is allowed to settle within the stove, rust will form. Rust expands as it takes a grip. This can lead to undue pressure on the stove joints, and this in turn may result in damage to the stove.

**NOTE:** It is best to thoroughly clean the stove after the heating season has concluded. Adding a dessicant, such as kitter litter, into the ash pan helps absorb moisture during the summer months. Be sure to remove this prior to the heating season.

Thank you for buying a Morsø stove.

We hope you have many years of carefree warmth in its company. Some initial experimentation with loading and running techniques will decide your normal routine. If you have any problems after this short learning phase, please refer to your stove dealer. Should they be unable to help for any reason, please contact us in writing at the address on the front of this publication.

### **3.5 Parts diagram for model Morsø 2B Classic 2020**

### 3.6 Parts list for model Morsø 2B Classic 2020

| Pos. No. | Parts                             | SKU no.  |
|----------|-----------------------------------|----------|
| 1        | Squirrel Side Panel               | 54200321 |
| 2        | Rear Plate                        | 44203821 |
| 3        | Smoke Valve                       | 44200800 |
| 4        | Horizontal Baffle                 | 44203600 |
| 5        | Front Baffle                      | 34203800 |
| 6        | Front                             | 44201521 |
| 9        | Side Panel for Upper Part         | 44202521 |
| 10       | Rear Plate for Lower Part         | 44202621 |
| 11       | Front for Lower Part              | 44202721 |
| 12       | Ash Door                          | 44204821 |
| 13       | Intermediate Grate Frame          | 44204921 |
| 14       | Riddling Grate                    | 44203000 |
| 15       | Inner Grate Frame                 | 44203100 |
| 16       | Leg                               | 44200121 |

## Guarantee Product Registration

### MORSØ 10 YEAR GUARANTEE CERTIFICATE

Behind every Morsø stove is more than 160 years of dedicated stove design and manufacturing experience. Quality control has always been at the heart of the production process and detailed measures have been put into place at all key stages of the build. Accordingly, provided that the stove has been supplied by an authorised Morsø dealer, Morsø will offer a 10-Year Manufacturers Guarantee against manufacturing defect to any of the main exterior body parts of its stoves.

# **IMPORTANT!**

## **How to heat safely for the environment and yourself!**

- Use only dry wood**

Use only dry (max. 20% moisture content) and untreated wood. The fuel must be split and 8 - 12 cm thick.

- Light**

Light with dry kindling (use 1 - 2 kg). Leave the door ajar and stay close to the stove during the lighting phase.

- Good layer of embers**

Be certain to have a good layer of embers before refilling. The wood should light within 2 minutes. If the logs do not ignite it may, in an extreme case, cause the flue gases to ignite which may pose a risk to material damage or personal injury.

- Refuelling**

When refuelling use 2 - 3 pieces of wood  
- no more than 2 - 2.5 kg.

- Ensure adequate air**

I.e. clear and yellow flames.

- Never burn overnight**

By appointment to The Royal Danish Court

**Félicitations pour l'acquisition de votre  
nouveau poêle Morsø !**

**Morsø, le plus important fournisseur sur le marché danois, fabrique des poêles-cheminées de haute qualité depuis 1853. En suivant les présentes instructions, nous sommes persuadés que votre nouveau poêle vous apportera plaisir et satisfaction durant de nombreuses années.**

**Sommaire**

|     | <b>Installation de votre poêle Morsø</b>   | <b>Page no.</b>                  |
|-----|--|----------------------------------|

Avant d'installer et d'utiliser votre nouvel appareil de chauffage, veuillez lire ce manuel en entier. Une mauvaise installation de cet appareil de chauffage peut entraîner un incendie.

Suivez les instructions d'installation pour limiter ce risque d'incendie. Le non-respect des instructions peut entraîner des dommages matériels, corporels ou même mortels.

Contactez l'administration locale de construction concernant les restrictions et équipements d'inspection dans votre région.

Conservez ces instructions

**Accessoires en option**

Une gamme étendue d'accessoires (tels que gants de manipulation, ustensiles de cheminée, nettoyant pour vitre et peinture résistant à la chaleur) est disponible pour une utilisation adaptée à votre poêle Morsø. Ils facilitent l'entretien et l'utilisation de chaque jour. Contactez votre revendeur Morsø pour plus d'informations.

Le 2B Classic 2020 de Morsø a été certifié par les services d'inspection PFS TECO. Les standards du test sont UL-1482-2011 (R2015) pour les États Unis et ULC-S627-00 pour le Canada.

**Le poêle est répertorié uniquement pour brûler du bois. Ne brûler aucun autre combustible.**

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certifié conforme aux normes d'émission de particules 2020 en utilisant du bois de corde.

L'émission moyenne de particules selon la méthode d'essai ASTM E3053-17 sur le bois de corde est de 0,47 g / h

Sous conditions spécifiques de test, on a pu constater que le rendement calorifique varie entre 9,037 et 31,988 Btu/hr  
Un essai effectué conformément à la norme CSA B415.1 a montré que ce poêle avait un rendement moyen de chauffage supérieur à 80,1 %.

Ce poêle doit être revisé et reparé périodiquement pour une utilisation correcte.  
Il est contre la loi fédérale d'utiliser ce poêle contredit les instructions de ce manuel.

We suggest that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

**La fonte**

La fonte n'est pas un matériau inerte. Raison pour laquelle il n'y a pas deux poêles identiques. Ceci en raison des marges de tolérance de la fonte et de la fabrication artisanale des poêles. De fines irrégularités sont normales sur la surface de la fonte.

## 1.0 Installation de votre poêle Morsø

L'installation des poêles à bois doit être sûre et légale.

Si votre poêle Morsø n'est pas installé correctement, un incendie peut en résulter. Afin de réduire ce risque, suivez attentivement les instructions d'installation. Contactez l'administration locale de construction concernant les restrictions et l'inspection de l'installation dans votre région.

**Avant de commencer l'installation de votre poêle, assurez-vous que :**

- Le poêle et le raccord de cheminée sont placés suffisamment loin des matériaux de combustion afin de remplir toutes les conditions d'espacement.
- La protection du sol est adéquate et correctement effectuée conformément aux conditions.

Contactez l'administration locale de construction pour toutes les approbations nécessaires.

La plaque d'informations située à l'arrière du poêle fournit les informations nécessaires concernant les données de test de sécurité, le nom du laboratoire de test agréé et les conditions d'installations.

Les conditions d'installation diffèrent selon les districts et l'administration locale de construction a le pouvoir d'autorisation définitive pour approuver votre installation. Discutez de l'installation avec eux avant de commencer. Pour plus d'informations, contactez votre vendeur.

**Ne connectez aucun conduit ou système de distribution d'air.**

**Important : Si vous ne suivez pas attentivement les instructions d'installation, il peut en résulter des situations dangereuses comme des incendies de cheminée ou de maison. Suivez attentivement les instructions et ne vous en écartez pas car cela peut entraîner des dégâts corporels ou matériels.**

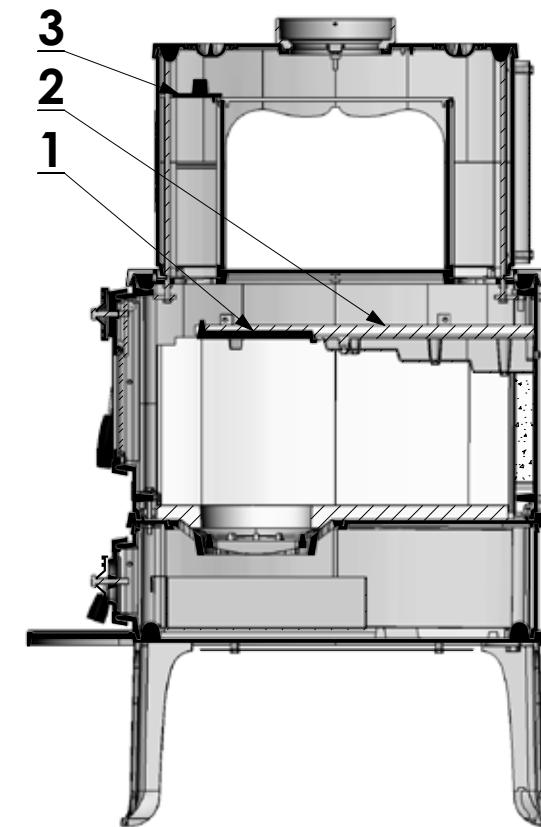

### 1.1 Déballage du poêle

2B Classic : après le déballage, dévissez la chambre de combustion de la palette avant de la poser tranquillement sur le côté. Pour éviter tout dommage du poêle et du sol, vous pouvez utiliser l'emballage en carton comme protection. Déballez les pieds fournis avec le poêle et vissez-les sur le socle en fonte à l'aide des boulons joints.

### 1.2 Vérifier les pièces mobiles dans le poêle

Après le déballage, vérifiez que les briques réfractaires sont fermement en place et n'ont pas bougé pendant le transport. Vérifiez également que le contrôle d'air fonctionne librement.

Avant le premier allumage, assurez-vous que le déflecteur (1) et l'isolation (2) au-dessus du déflecteur sont placés correctement, selon les illustrations ci-dessous. Vérifiez aussi que le couvercle (3) marqué 2118 est bien placé.

### **Pose du couvercle de fumée**

Placez le couvercle de fumée à côté de l'échappement de fumée, sur le devant du poêle. Pour le faire plus facilement, faites passer le tuyau de fumée par le collier de serrage, avant de fixer le conduit. Vous pouvez aussi placer le couvercle de fumée par l'ouverture de la porte d'accès. Voir illustrations ci-dessous.

### **Pose du déflecteur vertical**

Faites passer le déflecteur vertical par la porte, comme indiqué ci-dessous (illustrations 1 et 2). Placez le déflecteur dans la position correcte (illustrations 3 et 4). Placez l'isolation sur le déflecteur.

### **Accessoires standard**

Le gant Morsø et le joint étanche de raccord de tuyau céramique sont des accessoires standard et se trouvent habituellement dans le cendrier ou le foyer.

### 1.3 Le système de cheminée/conduit

Remarque : le système de conduit doit être sécurisé de façon indépendante et ne doit pas reposer sur le poêle.

**Le poêle ne doit pas être raccordé à un conduit de cheminée servant à un autre appareil. (Plusieurs tuyaux peuvent parcourir une seule souche de cheminée ; utilisez un seul tuyau par appareil).**

Utilisez une cheminée maçonnée de type résidentiel ou une cheminée d'usine de type HT répertoriée.

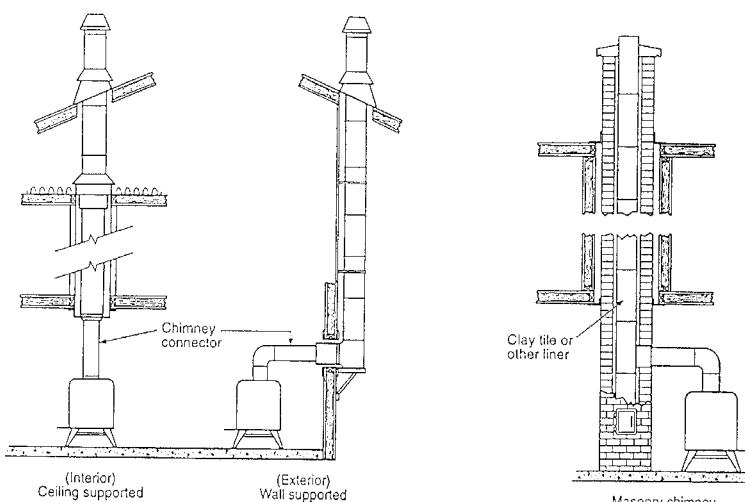

Cheminée Haute Température (H.T.) Standard UL-103-1985 (2100° F) pour les États-Unis et Standard Haute Température (650° C) ULC S-629 pour le Canada.

Les dimensions internes du raccord de cheminée et de la cheminée ne doivent pas être inférieures à 6 pouces (150 mm) de diamètre (ou coupe transversale équivalente) et ne doivent être beaucoup plus grandes. Une coupe trop grande a tendance à laisser les gaz du conduit refroidir excessivement, causant ainsi lenteur ou imprévisibilité de fonctionnement du poêle.

Nous conseillons que la longueur de la cheminée est au moins de 16 pieds (4,90 m) (pas indispensable) au-dessus du poêle dans des situations ménagères normales, mesurée du collier de serrage du tuyau à l'extrémité supérieure de la cheminée.

Les conditions locales comme, par exemple, la construction du toit, de gros arbres à proximité et une altitude élevée, peuvent avoir une influence sur le tirage et la hauteur de la cheminée. Veuillez donc contacter les ramoneurs professionnels locaux ou votre concessionnaire Morsø.

#### Installations typiques de cheminée usine ou maçonnerie

### 1.4 Connexion du conduit

Un collier de serrage de tuyau est placé dans la zone du foyer.

Utilisez un raccord de cheminée bleu ou noir de 24 MSG ou un raccord de cheminée à double paroi répertorié. Reportez-vous aux règlements locaux et aux instructions du fabricant de la cheminée concernant les précautions à respecter pour faire passer une cheminée à travers un mur ou un plafond combustible. Pensez à sécuriser le raccord de cheminée avec au moins trois vis au produit et à chaque section contiguë.

Positionnez le poêle et connectez le système de conduit.

**Portez des gants et des lunettes de protection lors du perçage, coupeage ou assemblage des sections du raccord de cheminée.**

### 1.5 Connexion à une cheminée déjà en place

Un raccord de cheminée est le tuyau à double ou simple paroi qui relie le poêle à la cheminée. La cheminée elle-même est la structure maçonnerie ou préfabriquée qui contient le tuyau. Les raccords de cheminée permettent de relier le poêle à la cheminée.

Les raccords à double paroi doivent être testés et répertoriés pour une utilisation avec des appareils à combustibles solides. Les raccords à paroi simple doivent être faits en acier de calibre 24 ou plus. N'utilisez pas de raccords galvanisés : ils ne résistent pas aux hautes températures atteintes par la fumée et les gaz d'échappement et qui peuvent dégager des vapeurs toxiques sous grande chaleur. Le raccord doit avoir un diamètre de 6 pouces (150 mm).

**Si possible, évitez de faire passer le raccord de cheminée à travers un mur ou un plafond combustible. Si cela est inévitable, référez-vous aux sections sur Traverser les murs. Ne faites pas passer le raccord à travers un grenier, un placard ou tout espace confiné semblable lors de l'installation des raccords de cheminée.**

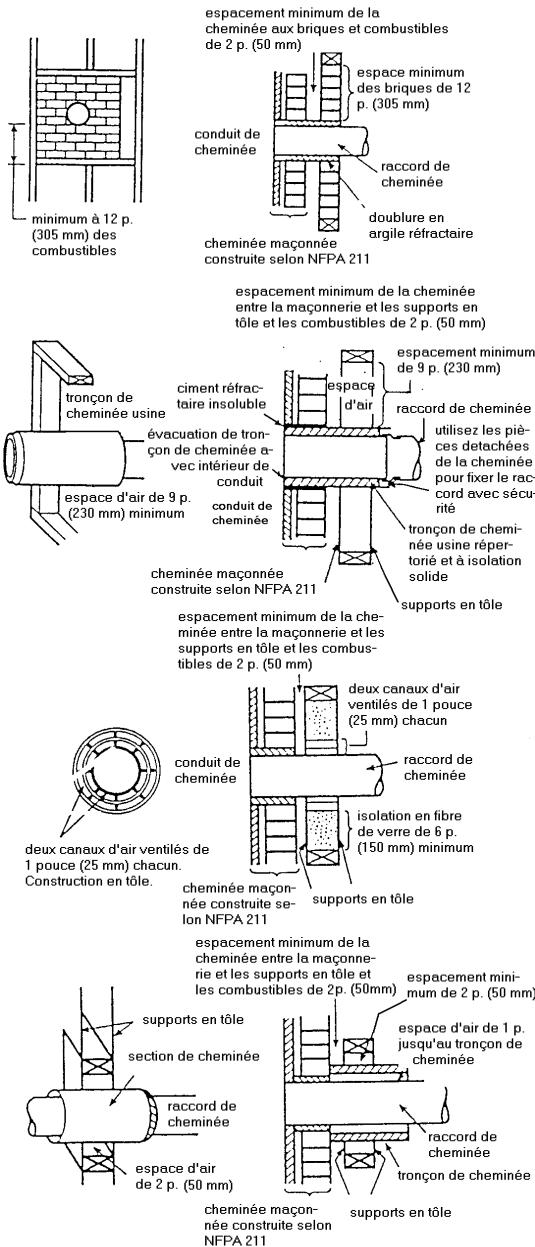

Il est primordial de garder les gaz du tuyau en déplacement doux dans la bonne direction. Ne déviez pas dans un grand vide à cet endroit ; formez plutôt une section continue jusqu'en haut. Utilisez des courbures moyennes (par ex. 45° au lieu de 90°) plutôt que des angles aigus lorsqu'un changement de direction est nécessaire. Toutes les parties du conduit doivent être accessibles pour des raisons de nettoyage.

Dans les tronçons de cheminée horizontaux, maintenez un espacement de 18 pouces (455 mm) du plafond. Gardez-les aussi courts et directs que possible avec des coude n'excédant pas 90 degrés. Inclinez les tronçons horizontaux de raccords de  $\frac{1}{4}$  par pied (20mm par mètre) en partant du poêle vers la cheminée. La longueur maximum recommandée d'un tronçon horizontal est de 3 pieds (1 mètre) et la longueur totale ne doit pas dépasser 8 pieds (2,5 mètres). Les informations sur l'assemblage et l'installation des raccords sont fournies par les instructions du fabricant, comme vous assemblez et fixez le raccord au poêle et à la cheminée.

**Assurez-vous que le poêle et le raccord de cheminée installés se trouvent à une distance correcte des matériaux de combustion proches. Voir le paragraphe sur les espacements page 9.**

Si le conduit passe par une paroi ou une cloison de construction inflammable, l'installation doit être conforme à la norme CAN/CSA-B365.

## Systèmes de raccord de cheminée et autorisations des appareil de chauffage ménagers à travers les murs inflammables

A. Maçonnerie en briques charpentée d'au moins 3,5 pouces (90 mm) d'épaisseur dans un mur inflammable avec une séparation en brique de 12 pouces (305 mm) minimum de la doublure en argile aux combustibles. La doublure en argile réfractaire doit aller de la surface de la sortie du mur en brique jusqu'à la surface interne de la doublure du tuyau de cheminée mais pas au delà et doit être solidement cimentée en place.

B. Tronçon de cheminée usine répertoriée, à isolation solide, de même diamètre intérieur que le raccord de cheminée et ayant une isolation de 1 pouce (25 mm) ou plus avec un espace d'air minimum de 9 pouces (230 mm) entre le mur extérieur de la longueur de la cheminée et les combustibles.

C. Raccord de cheminée en tôle, minimum calibre 24 en épaisseur, avec un cylindre ventilé minimum calibre 24 en épaisseur ayant deux canaux d'air de 1 pouce (25 mm), séparés des combustibles par au moins 6 pouces (150 mm) d'isolation de fibre de verre. L'ouverture doit être couverte et le cylindre sou tenu soutenu par un support en tôle, minimum calibre 24 en épaisseur.

D. Tronçon de cheminée usine répertoriée, à isolation solide d'un diamètre intérieur plus grand de 2 pouces (50 mm) que le raccord et ayant une isolation de 1 pouce (25 mm) ou plus, servant de traverse pour un raccord de cheminée à simple paroi en tôle d'épaisseur minimum de calibre 24, avec un espace d'air d'au moins 2 pouces (50 mm) entre le mur extérieur de la section de cheminée et les combustibles. La longueur minimum de la section de cheminée doit être de 12 pouces (305 mm) et espacée de 1 pouce (25 mm) du raccord utilisant des plaques de soutien en tôle à chaque extrémité de la section de cheminée. L'ouverture doit être couverte et la section de cheminée soutenue des deux côtés avec des supports en tôle fixés à des murs de calibre 24 épaisseur minimum. Les fixations utilisées pour sécuriser la section de cheminée ne doivent pas pénétrer la doublure du conduit de cheminée.

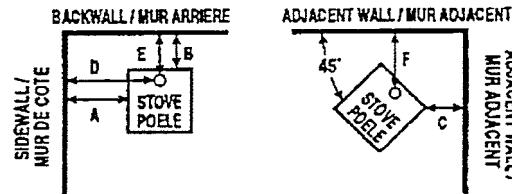

## 1.6 Positionnement du poêle

### Distance avec murs et linteaux

Si le poêle se trouve à proximité de matériaux combustibles, consultez tous les règlements de constructions locaux et nationaux en vigueur en ce qui concerne les espacements. Quels que soient les règlements qui s'appliquent à votre région, n'installez en aucun cas le poêle à moins de 8 pouces (205 mm) des matériaux combustibles sur les côtés et à moins de 16 pouces (405 mm) au-dessus du poêle (des installations des poêles demandent plus d'espacement au-dessus du poêle - voir le graphique des distances en dessous). Il peut s'avérer nécessaire d'augmenter ces distances si les matériaux sont sensibles à la chaleur. Notez également que les papiers peints et autres matériaux de décoration peuvent se détacher sous l'effet de la chaleur. Prenez garde à ce qu'ils ne tombent pas sur le poêle, le cas échéant.

Si le poêle se trouve à proximité de matériaux non combustibles, un espace de 4 pouces (100 mm) ou plus est recommandé pour des raisons de nettoyage et afin d'assurer la circulation de la chaleur autour du poêle et dans toute la pièce.

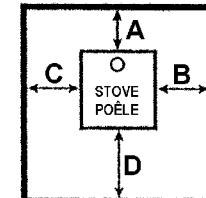

### MINIMUM CLEARANCES TO COMBUSTIBLES: DEGAGEMENTS MINIMAUX AUX MATERIAUX COMBUSTIBLES:

| Conditions d'espacement requises:  | Installation résidentielle standard<br>(raccord à simple paroi) |              |
|------------------------------------|---|--------------|
|                                    | États-Unis  | Canada       |
| A. De la paroi latérale à l'unité  | 26" (660 mm)  | 26" (660 mm) |
| B. De la paroi arrière à l'unité   | 7" (178 mm)   | 7" (178 mm)  |
| C. De la paroi d'angle à l'unité   | 22" (559 mm)  | 22" (559 mm) |
| D. De la paroi latérale au raccord | 29" (737 mm)  | 29" (737 mm) |
| E. De la paroi arrière au raccord  | 15" (381 mm)  | 15" (381 mm) |
| F. De la paroi d'angle au raccord  | 29" (737 mm)  | 29" (737 mm) |
| G. De l'unité au plafond           | -   | -            |
| H. Du sol au plafond               | -   | -            |

### NON-COMBUSTIBLE FLOOR PROTECTOR: PROTECTEUR DE PLANCHER INCOMBUSTIBLE

FLOOR PROTECTOR MUST BE NON-COMBUSTIBLE MATERIAL. IT MUST EXTEND BENEATH HEATER, AND TO THE FRONT/SIDES/REAR AS INDICATED.

LE PROTECTEUR DE PLANCHER DOIT ÊTRE D'UN MATERIAU INCOMBUSTIBLE. IL DOIT S'ETENDRE EN DESSOUS DE L'APPAREIL ET AU DEVANT, AUX COTES ET À L'ARRIÈRE DE L'APPAREIL COMME INDIQUE.

| Exigences de protection du sol           | Matériaux incombustibles sous le poêle |        |
|--|--|--------|
|  | USA                                    | Canada |
| A. Distance de prolongement, arrière     | -                                      | 200 mm |
| B. Distance de prolongement, côté droit  | 6"                                     | 200 mm |
| C. Distance de prolongement, côté gauche | 6"                                     | 200 mm |
| D. Distance de prolongement, avant       | 16"                                    | 450 mm |

#### **Sur le sol**

Si le poêle est placé sur un sol combustible, une protection solide non combustible doit couvrir le sol sous le poêle. Cette protection doit couvrir une zone d'au moins 16 pouces (450 mm Canada) devant la porte du poêle et au moins 8 pouces (200 mm Canada) de chaque côté de l'ouverture amovible pour le mazout ou les cendres. Pour les tuyaux de cheminée horizontaux, une protection non combustible doit être placée au-dessous du tuyau, dépassant de 2 pouces de chaque côté.

Vous devez vous assurer que le sol dans cette zone peut aisément supporter le poids du poêle.

#### **Distance des meubles**

La distance minimum recommandée entre le poêle et les meubles est de 30 pouces (760 mm). Veuillez noter que certains meubles sont plus facilement affectés par la chaleur et peuvent par conséquent nécessiter d'être plus éloignés. Ceci est votre responsabilité.

De plus, maintenez tout autre matériau combustible éloignés du poêle. En général, une distance de 30 pouces (760 mm) doit être conservée entre le poêle et les objets inflammables mobiles tels que chiffons, journaux, bois de chauffage, etc.

#### **NE PAS INSTALLER DANS UN MOBILE HOME**

#### **Remarque :**

#### **Protection de l'acide**

En cas de lavage à l'acide de la maçonnerie autour du poêle, protégez la surface du poêle avec une couverture résistante à l'acide.

#### **Entrée d'air frais**

A moins que la circulation d'air dans la pièce par les portes, fenêtres et autre soit jugée suffisante, une entrée d'air frais est nécessaire. Cette entrée d'air doit avoir un espace d'air libre de 2 pouces carrés (1250 mm carrés). Ceci est particulièrement important lorsque la pièce est bien scellée ou lorsqu'une hotte aspirante ou un système de ventilation perturbe la pression naturelle de l'air. Une telle entrée d'air ne doit pas se trouver sur un mur habituellement sujet à une pression négative du déplacement habituel du vent. Evitez de placer l'entrée d'air directement à l'opposé du poêle dans la pièce créant ainsi un courant d'air froid.

## **2.0 Fonctionnement**

### **2.1 Avant d'allumer le feu**

Pour une utilisation avec des combustibles solides uniquement. Ne poussez pas trop le feu, si l'appareil ou le raccord de cheminée devient incandescent, le feu est trop fort. Inspectez et nettoyez fréquemment la cheminée. Dans certaines conditions d'utilisation, la formation de créesote peut arriver rapidement. A cause des risques de débordement de fumée et de flammes, opérez uniquement avec la porte fermée.

#### **Attention :**

Chaud pendant le fonctionnement.

Tenir les enfants, vêtements et meubles éloignés.

Risque de brûlures cutanées en cas de contact.

Ne pas utiliser de produits chimiques ni de liquides pour l'allumage.

Ne pas brûler de déchets ni de liquides inflammables.

Ne pas utiliser d'essence, de pétrole à lampe, de kérósène, d'allumeur ou de liquide à charbon de bois ou tout autre liquide pour démarrer ou relancer un feu dans ce poêle. Tenir tous ces liquides éloignés du poêle pendant son fonctionnement.

#### **Choisir votre combustible**

Vous pouvez brûler tous les types de bois naturel dans ce poêle mais ils doivent être bien secs. Une fois coupé en longueur, couper le bois en deux – conformément aux dimensions mentionnées ci-dessous- pour permettre à l'humidité de s'évaporer. Couper le bois à une longueur maximale de 18 pouces (45 cm) et d'un diamètre d'environ 3 à 3,5 pouces (7 à 8 cm). Si vous pouvez peser votre bois, comptez environ 1,0 kg. Pour une combustion optimale et un bon dégagement de chaleur, le bois doit pas contenir plus de 20% d'humidité; ceci peut facilement être contrôlé à l'aide de l'hygromètre Morsø (article # 62929900).

Stockez les bûches couvertes dans un endroit bien aéré, où l'air peut circuler entre les bûches. Certains bois tendres peuvent n'avoir besoin que d'un bel été pour sécher, alors que certains bois plus durs, comme p.ex. le chêne, l'érable et l'orme peuvent prendre jusqu'à 18 mois. Eviter du bois trop sec, souvent d'une couleur tirant sur le gris, car dans certaines conditions, cela peut poser des problèmes de rendement tels que lenteur et projection d'étincelles. Un bois bien sec est léger à manipuler et présente des fentes du centre vers les extrémités. Si votre bois crépite ou grésille en brûlant et que de la suie persiste à se former sur la porte vitrée du poêle, votre bois n'est pas suffisamment sec. N'utilisez jamais de dérive (de la mer) dont le contenu salé peut entraîner de la corrosion, ni du bois de construction pouvant être imprégné de produits chimiques.

**Attention! Ne pas entreposer de combustible dans l'espacement libre requis à proximité du poêle ni dans l'espace destiné au chargement du combustible ou au vidage des cendres.**

#### **Allumage**

Au début, faites un petit feu pour que la peinture s'accoutume et que les plaques principales du poêle se mettent en place. La peinture peut dégager des vapeurs. Aérez la pièce pendant cette phase. Le réglage de l'aération, les techniques d'allumage et les intervalles d'alimentation dépendent du tirage de la cheminée, du combustible utilisé, de la chaleur voulue, etc. Quelques techniques de base sont soulignées ci-dessous.

## **En principe:**

Votre poêle est équipé d'entrées d'air primaire et secondaire.

L'air primaire est contrôlé grâce au levier situé sous le rebord à cendres du poêle. Pour ouvrir l'admission d'air, déplacer le levier de contrôle vers le bas. De l'air préchauffé pénètre alors dans la chambre de combustion via le système de " nettoyage d'air " situé à l'intérieur du poêle et au dessus de la vitre.

L'air secondaire est injecté dans les gaz du conduit à la fois au dessus et en face du feu, rendant ainsi le processus de combustion plus propre et plus efficace.

L'admission d'air secondaire est constamment ouverte et n'est pas réglable.

Pour plus de sécurité, votre poêle est équipé d'une poignée amovible. Lorsqu'elle n'est pas utilisée, on peut la ranger grâce au goujon au pied droit du poêle.

## **2.2 Allumage et intervalles d'alimentation**

Le premier allumage du poêle nécessite un volume d'air important. Lorsque le poêle est froid, laissez la porte entrouverte de 2 ou 3 cm pendant les premières minutes et ouvrez complètement l'entrée d'air primaire. Ne laissez pas le poêle sans surveillance tant que la porte est ouverte.

Afin de constituer un lit de cendres raisonnable au fond du poêle, utilisez 2 à 4 livres de petit bois sec lors du premier allumage. Maintenez en permanence une couche de 1 à 1,5 pouces (2 à 3 cm) de cendres au fond de la chambre de combustion à chaque fois.

1. Lorsqu'on allume un poêle à bois, il est recommandé d'utiliser la méthode d'allumage Top Down. C'est la méthode d'allumage la plus respectueuse de l'environnement. Pour obtenir rapidement la formation d'une couche de braises, utiliser pour l'allumage 2 sachets allume-feu, ainsi que 2 kg environ de bois d'allumage. Poser les allume-feu juste en-dessous de la couche supérieure de petit bois.

Il est important de commencer avec précaution, de telle sorte que la combustion se développe lentement. De cette manière, la formation de suie sur la vitre est faible. En effet, l'enrassement de la vitre est souvent dû à une combustion trop violente et au fait que les flammes entrent en contact avec des surfaces froides. En évitant la formation de suie lors de l'allumage et en faisant en sorte d'obtenir une couche de braises chaudes, la formation de suie sera minimale lors des étapes suivantes d'alimentation.

2. Ouvrez complètement le régulateur d'air primaire.

Tournez la commande rotative de 2 1/2 tours dans le sens antihoraire de la position fermée pour ouvrir complètement l'alimentation en air primaire  
(Voir encadré page 15 concernant la position fermée)

3. Allumez le feu.

4. Après l'allumage, fermez partiellement les portes en les laissant entrouverte de 2 ou 3 cm pour laisser entrer suffisamment d'air de combustion.

5. Lorsque la cheminée est chaude après 5 à 10 minutes, fermez la porte.

Nous recommandons de régler la commande de la centrifugeuse à un minimum de 1 à 1 1/2 tour dans le sens antihoraire à partir de la position fermée, lors de la combustion du bois d'allumage / démarrage.

Un lit de braises convenable se forme au bout de 15 à 20 minutes.

6. Au moment de recharger, repartez les braises dans le foyer en les rapprochant surtout vers l'avant du poêle.

7. Poser trois morceaux de bois sur les braises. Laissez ½ pouce (1 cm) ou plus entre chaque morceau.

**Toujours garder la charge de carburant sous le tube d'air secondaire le plus bas. L'espace devant et au-dessus du tube à air le plus bas est réservé à la combustion de gaz volatil.**

8. Fermez la porte. Tournez la commande rotative de 2 1/2 tours dans le sens antihoraire à partir de la position fermée pour ouvrir complètement l'alimentation en air primaire  
Le nouveau carburant s'enflammera dans une minute ou deux

9. Après quelques minutes, réglez l'entrée d'air primaire en fonction de la chaleur voulue.

Si vous utilisez le taux de combustion bas minimum (commande de rotation fermée) permettre au feu de s'établir correctement, en brûlant à une vitesse de combustion moyenne pendant environ 15 minutes à l'avance. Tournez la commande rotative 1-11 / 2 tours dans le sens antihoraire à partir de la position fermée pour atteindre un taux de combustion moyen.

10. Anticipez chaque alimentation et souvenez-vous de n'ajouter qu'une modeste couche de bois tant qu'il y a beaucoup de braises. Reprenez les points 6 à 9.

**N'essayez en aucun cas d'accroître le feu de votre poêle en modifiant le réglage du contrôle d'air décrit dans ces instructions.**

**Attention : Les poêles à feu de bois ne doivent jamais être laissés sans surveillance la porte ouverte.**

Cet appareil de chauffage à bois a un taux de combustion minimal inférieur fixé par le fabricant et qu'il convient de ne pas modifier. Les règles fédérales interdisent de modifier ce réglage ou d'effectuer sur ce poêle toute autre intervention contrevenant aux instructions de service figurant dans le présent manuel

Lorsque le contrôleur d'air du cône est tourné à fond vers le bas, position fermée, il est toujours un petit écart entre le cône et le cadre de la porte permettant un faible taux de combustion minimum. L'écart défini par le fabricant est de 1 mm égal à 3/4 de tour

Si vous laissez les portes entrouvertes, gaz et flammes peuvent sortir du foyer par l'ouverture, créant ainsi des risques d'incendie et de fumée. Nous vous conseillons d'installer un détecteur de fumée dans la pièce où vous installez le poêle.

**NE PROVOQUER JAMAIS DE SURCHAUFFE.** Toute surchauffe peut entraîner un incendie ou des dégâts permanents pour le poêle. Si n'importe quelle pièce du poêle devient incandescente, vous êtes en surchauffe.

Le poids maximal de bois recommandé par charge est de 3.5 kg/7 lbs (environ 5 bûches).

Dans des conditions de chauffage normales, la température moyenne à l'intérieur du tuyau du poêle, mesurée à 20 cm au-dessus du poêle est d'env. 300° C (550°F). La température maximale dans le tuyau du poêle ne doit pas excéder 450° C (750°F). Une température du poêle dépassant 450°C (750°F) est considérée comme surchauffe et peut être la cause d'une usure prématuée du poêle.

Pour permettre de mesurer correctement la température de fonctionnement de votre poêle, nous recommandons l'utilisation du Thermomètre à gaz pour poêle Morsø (article # 62901200). Le Thermomètre à gaz pour poêle est magnétique; il se fixe sur le tuyau du poêle, à environ 20 cm (8") au-dessus de la plaque supérieure du poêle, et mesure la température de surface du tuyau du poêle. Disponible auprès de votre distributeur Morsø agréé.

#### **Conditions de tirage**

Si de la fumée ou des émanations se dégagent du poêle lors de l'allumage et de l'alimentation ou si tout simplement le feu ne prend pas, ceci est sûrement dû à un faible tirage. (Dans très peu de cas, pas assez d'air frais entre dans la pièce – voir les conseils d'installation plus haut). Demandez conseil à votre vendeur pour savoir comment améliorer votre système de tuyauterie pour accroître le tirage.

#### **Règles de feu de bois**

Pour avoir moins de chaleur, mettez moins de bûches dans le poêle et réduisez la quantité d'air. Il est toujours important de maintenir une bonne couche de braises.

Moins de chaleur – moins de bois – moins d'air

Plus de chaleur – plus de bois – plus d'air

Des dépôts de suie se font sur la vitre si le poêle fonctionne trop lentement ou si votre bois n'est pas assez sec.

Il est fortement conseillé de ne pas laisser le poêle allumé pendant la nuit. En plus des effets nocifs sur l'environnement, le rendement du bois serait mauvais puisque les gaz qu'il contient ne s'enflamme pas à basse température mais se fixent sous forme de suie (gaz non consumés) dans la cheminée et le poêle.

#### **Détecteurs de monoxyde de carbone**

Dans certaines juridictions, l'installation de détecteurs de fumée et d'oxyde de carbone dans les lieux où sont placés des appareils de chauffage est obligatoire. Pour assurer votre sécurité, installez au moins un détecteur de fumée à chaque étage de votre maison. Il devra être placé à distance de l'appareil à bois et à proximité des espaces de repos. En effet, en plaçant un détecteur de fumée trop près du poêle, l'alarme risque de se déclencher si un rejet de fumée intervient lorsqu'on ouvre la porte pour remettre du bois. Suivez les instructions du fabricant de détecteurs de fumée concernant l'emplacement, l'installation et l'entretien.

## **3.0 Entretien**

**Lors de l'entretien de votre poêle, portez toujours des lunettes et des gants de protection.**

### **3.1 Entretien extérieur**

La surface du poêle est peinte avec la peinture résistant à la chaleur Senotherm. Nettoyez de préférence avec un aspirateur équipé d'un embout à brosse souple ou en essuyant avec un chiffon anti-peluche.

Au bout d'un certain temps, la surface peinte peut devenir légèrement grise. Vous pouvez trouver une boîte de peinture en spray pour retouche Morsø chez votre revendeur. Il suffit de quelques minutes – en suivant les instructions- pour l'appliquer. Lors du premier allumage après une retouche, une légère odeur peut se dégager du poêle le temps de l'accoutumance de la peinture. Assurez-vous de bien aérer la pièce pendant cette période.

### **3.2 Entretien intérieur**

#### **Vitre**

Si le poêle est généralement utilisé aux températures correctes, la vitre ne devrait être que peu ou pas sale. Si de la saleté se dépose lors de l'allumage, la majeure partie brûlera au fur et à mesure que la température augmente. En cas de dépôts plus importants qui ne brûlent pas, utilisez le nettoyant pour vitres Morsø. Appliquez sur la vitre froide en suivant les instructions. N'utilisez jamais de nettoyants abrasifs sur la surface vitrée.

#### **Causes possibles de vitre sale**

- Combustible trop humide
- Bûches trop grandes ou non fendues
- Température de combustion trop basse

**Remplacez immédiatement toute vitre cassée.  
N'utilisez pas votre poêle si la vitre de la porte est endommagée.**

Si vous devez changer la vitre, utilisez du verre céramique à haute température fourni par Morsø. Contactez votre concessionnaire Morsø.

## **UTILISEZ TOUJOURS DES PIÈCES DE RECHANGE D'ORIGINE MORSØ**

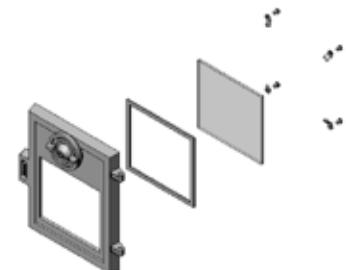

#### **Installer la vitre**

N'installez jamais la vitre lors du fonctionnement du poêle.

#### **Remplacement du vitre céramique**

Le vitre céramique ne peut pas être recyclé, car sa température de fusion est trop élevée. Si le vitre céramique est mélangé au verre normal, la matière première est dénaturée et le processus de recyclage du vitre peut être interrompu. Veillez à ce que le vitre réfractaire ne soit pas traité comme matériau à recycler normal. Vous contribuez beaucoup à la protection de l'environnement.

ATTENTION ! Doit être déposé comme vitre céramique dans une station de collecte des déchets.

1. Soulevez la porte pour la sortir de ses gonds et posez-la face avant vers le bas sur des cartons ou tout autre tissu non abrasif.
2. Dévissez les quatre boulons qui maintiennent la vitre. (Au cas où un boulon se casserait lors du dévissement, retirer le reste du boulon en perçant au centre avec une mèche de perceuse acier grande vitesse de 1/8 de pouce (3 mm). Des mèches plus petites peuvent également convenir mais n'utilisez en aucun cas de mèche plus grande. Assurez-vous que la mèche ne touche pas les bords du boulon – ceci pouvant endommager le filetage dans la fonte).
3. Retirez le joint d'étanchéité en céramique usagé et nettoyez la surface en dessous avec de la paille de fer ou du papier de verre pour éliminer les particules.
4. Mettez en place le nouveau joint d'étanchéité tout autour de l'emplacement de la vitre en vous assurant de bien le pincer tout le long de façon à faire un joint continu. Ne laissez aucun espace.
5. Placez la nouvelle vitre sur les bandes et revissez les boulons et équipements à la main.
6. Enfin, donnez environ un demi-tour supplémentaire aux boulons. La vitre doit être tenue assez fermement de manière à ne pas bouger pendant le nettoyage. Ne vissez pas les boulons trop fort car cela entraîne une pression excessive sur la vitre risquant de la casser - important !

**Afin de réduire le risque de casser la vitre, évitez de frapper sur la vitre ou de claquer la porte.**

#### Pièces de rechange intérieures

L'équipement feu – comprenant le cendrier, la grille, les briques réfractaires, plaques de fonte pour protection feu, la vitre, le déflecteur et le collier de serrage du tuyau – est soumis à une chaleur extrême produite par le feu. De temps en temps, il peut s'avérer nécessaire de remplacer une de ces pièces pour des raisons d'entretien routinier.

#### Remplacement des pierres

Lors du remplacement des pierres, dévisser à l'arrière du poêle la plaque de rayonnement, fixée avec 4 vis. Cela permet d'accéder aux 2 boulons, maintenant en place la chicane pour la fumée. Retirer ces boulons de manière à pouvoir lever la chicane pour la fumée à l'intérieur du poêle. Lever la chicane pour la fumée afin de pouvoir sortir la pierre du poêle et installer la nouvelle. Placer les pierres latérales dans les rainures de la plaque de fond en vermiculite. Lorsque les pierres sont placées correctement, abaisser la chicane pour la fumée sur les pierres et la revisser sur le côté arrière en fonte du poêle. Pour terminer, monter la plaque de rayonnement arrière avec les 4 vis.

**REMARQUE : L'équipement feu, la corde céramique et la finition de peinture ne sont pas couverts par la garantie.**

Toutes ces pièces de rechange sont en vente chez votre concessionnaire Morsø et nous vous recommandons de remplacer toute pièce endommagée aussi tôt que possible afin d'éviter des dégâts supplémentaires.

Si le déflecteur est déformé par une surchauffe, le poêle continue à fonctionner même si sa performance peut être compromise. Remplacez-le dès que possible.

#### Causes possibles d'usure interne rapide

- Feu fort et persistant
- Accumulation de suie et de cendres

#### Joint d'étanchéité

Le joint entourant le périmètre des portes peut durcir avec le temps. Remplacez-les s'il devient difficile de fermer les portes ou si l'air commence à s'infiltrer autour des portes, causant ainsi un feu un peu moins contrôlable. Un jeu de joint Morsø est en disponible chez votre revendeur.

#### 3.3 Nettoyage du poêle et du conduit

Vérifiez la présence de suie au-dessus de la plaque du déflecteur et autour de la sortie du tuyau environ tous les mois pour commencer. Si le poêle devient soudain lent, regardez si de la suie est tombée autour du collier de serrage du tuyau ou dans le tuyau/ la cheminée.

**Effectuez une inspection de la cheminée et du raccord de cheminée au moins tous les deux mois pendant la saison de chauffage pour détecter la formation éventuelle de créosote. S'il y a de créosote il faut l'éliminer pour réduire le risque d'un feu de cheminée.**

Nettoyez le tuyau/ la cheminée – sur toute la longueur du poêle jusqu'à l'extrémité du tuyau sur le toit de la maison.

Une bonne habitude est de nettoyer le tuyau après chaque saison de chauffage dans tous les cas et d'inspecter avant chaque saison pour vous assurer qu'aucun nid d'oiseau ou autre bouchon ne s'est constitué pendant la saison de non-utilisation.

#### Elimination des cendres

Videz les cendriers quotidiennement ou selon les besoins. Si vous laissez des cendres s'accumuler en dessous de la grille, la chaleur est piégée et cela peut entraîner un mauvais fonctionnement prématûr de la grille.

#### Videz le cendrier selon cette procédure :

Ouvrez les portes avant et utilisez une pelle ou un tisonnier pour remuer l'excès de cendres et la faire tomber dans les cendriers à travers les fentes de la grille. Retirez le cendrier en prenant soin de bien le tenir horizontal.

Jetez les cendres dans un récipient en métal avec un couvercle hermétique.

Placez le récipient fermé contenant les cendres sur un sol non inflammable ou sur la terre, bien éloigné de tout matériau combustible en attendant l'enlèvement définitif. Si vous vous débarrassez des cendres en les enterrant ou en les dispersant, gardez-les dans le récipient fermé jusqu'à leur refroidissement complet. Remettez le cendrier en place et fermez le poêle.

#### Attention :

**Ne jamais vider un poêle en train de fonctionner.**

**Ne jamais utiliser votre aspirateur ménager ou professionnel pour enlever les cendres du poêle ; toujours éliminer les cendres correctement.**

#### Créosote – Formation et élimination.

Lorsque le bois brûle lentement, il produit du goudron et d'autres vapeurs organiques qui s'associent avec l'humidité émise pour former du créosote. Les vapeurs de créosote se condensent dans le conduit de cheminée relativement froid lors d'un feu brûlant faiblement. Il en résulte que les résidus de créosote s'accumulent sur la paroi du tuyau. Une fois enflammé, le créosote crée un feu extrêmement chaud. Vérifiez la cheminée et le conduit de cheminée au moins deux fois par mois pendant la saison de chauffage pour contrôler l'absence de formation de créosote. En cas de dépôt de créosote, éliminez-le pour diminuer le risque de feu de cheminée.

## Ramonage de la cheminée

Inspectez le système régulièrement au cours de la saison de chauffage comme partie intégrante d'un programme d'entretien régulier. Pour inspecter la cheminée, laisser le poêle refroidir complètement. Puis, à l'aide d'un miroir, regardez par le collier du tuyau dans le conduit de cheminée. Si vous ne pouvez pas inspecter le système de conduit de cette façon, déconnectez le poêle pour faciliter l'accès.

Nettoyez la cheminée à l'aide d'une brosse de la même forme et taille que le tuyau. Faites coulisser la brosse de haut en bas et inversement dans le conduit afin de faire tomber tous les dépôts en bas de la cheminée où vous pouvez les évacuer grâce à la porte de nettoyage. Nettoyez le raccord de cheminée en déconnectant les sections, mettez-les à l'extérieur et éliminez tous les dépôts avec une brosse dure. Remettez les sections du raccord en place après le nettoyage en vous assurant de sécuriser les joints entre chaque section avec des vis en tôle. Si vous ne pouvez pas inspecter ou nettoyer la cheminée vous-même, contactez votre concessionnaire Morsø ou un ramoneur professionnel.

## En cas de feu de cheminée, agissez rapidement et :

1. Fermez le contrôle d'air.
2. Faites sortir tout le monde de la maison.
- 3.appelez les pompiers.

## Entretien annuel

Avant la saison de chauffage, effectuez un nettoyage en profondeur, inspectez et réparez :

Nettoyez la cheminée et le raccord de cheminée à fond.

Vérifiez si la cheminée est abîmée ou usée. Remplacez les sections faibles de la cheminée préfabriquée. Faites faire les réparations par un maçon pour la cheminée maçonnerie.

Inspectez le raccord de cheminée et remplacez les sections endommagées.

Vérifiez l'usure ou la compression de l'étanchéité et remplacez si nécessaire.

Vérifiez si la vitre est craquelée; remplacez si nécessaire.

Vérifiez si la porte et les poignées ferment bien. Ajustez si nécessaire.

## 3.4 Périodes prolongées de non-utilisation du poêle

### Important:

Si vous n'utilisez pas le poêle pendant une période quelconque, nettoyez-le en profondeur et laisser l'aération légèrement ouvert pour laisser l'air circuler. Assurez-vous que le tuyau ne laisse pas entrer d'eau de pluie près du poêle ; installez un chapeau sur la cheminée mais ne bouchez pas complètement le tuyau.

Ces mesures permettent d'assurer un léger courant d'air dans le poêle et au corps du poêle de rester sec, dans les moindres recoins.

Les cendres laissées dans un poêle qui ne brûle pas attirent l'humidité comme du papier buvard.

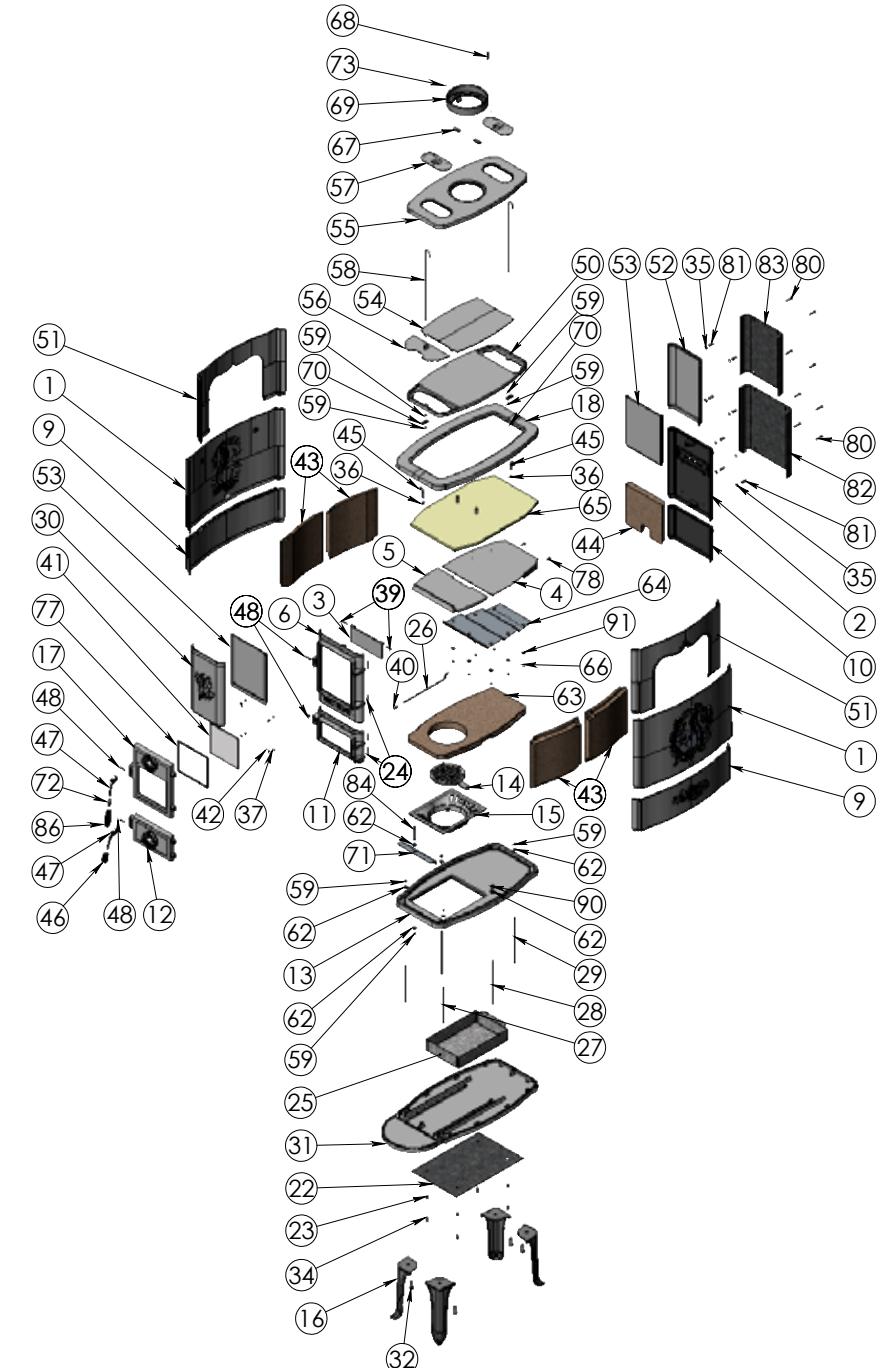

Si vous laissez l'humidité s'installer dans le poêle, de la rouille se forme. La rouille s'étend dès qu'elle prend prise. Ceci peut entraîner une pression excessive sur les joints du poêle, endommageant ainsi ultérieurement le poêle.

**REMARQUE :** Il est préférable de nettoyer à fond le poêle à la fin de la saison de chauffage. Ajouter un dessicatif, comme de la litière pour chat, dans le cendrier aide à absorber l'humidité pendant les mois d'été. Assurez-vous de l'enlever avant la saison de chauffage.

Nous vous remercions d'avoir acheté un poêle Morsø.

Nous vous souhaitons des années de chaleur sans souci en sa compagnie. Après quelques expérimentations initiales avec les techniques d'alimentation et de fonctionnement, vous trouverez vos habitudes. En cas de problèmes après cette courte phase d'apprentissage, adressez-vous au vendeur de votre poêle. Si celui-ci est dans l'impossibilité de vous aider, veuillez nous contacter par écrit à l'adresse figurant sur la première page de cette publication.

## 3.5 Schéma des pièces détachées pour le modèle 2B Classic 2020

### 3.6 Liste des pièces détachées pour le modèle 2B Classic 2020

| No. | Pièces                                       | SKU no.  |
|-----|--|----------|
| 1   | Panneau latéral Ecureuil                     | 54200321 |
| 2   | Plaque arrière                               | 44203821 |
| 3   | Valve à fumée                                | 44200800 |
| 4   | Déflecteur horizontal                        | 44203600 |
| 5   | Déflecteur vertical                          | 34203800 |
| 6   | Face frontale                                | 44201521 |
| 9   | Panneau latéral, partie supérieure           | 44202521 |
| 10  | Plaque arrière, partie inférieure            | 44202621 |
| 11  | Porte, partie inférieure                     | 44202721 |
| 12  | Porte du cendrier                            | 44204821 |
| 13  | Cadre intermédiaire de poêle                 | 44204921 |
| 14  | Grille à fentes                              | 44203000 |
| 15  | Cadre de poêle intérieur                     | 44203100 |
| 16  | Pied   | 44203221 |

## Enregistrement de la garantie du produit

### CERTIFICAT DE GARANTIE 10 ANS MORSØ

Chaque produit Morsø est le résultat de plus de 160 années d'expérience de la conception et de la fabrication des poêles à bois. Le contrôle de la qualité a toujours été la clé de voûte de notre processus de production. Des mesures rigoureuses ont été mises en place à chaque étape clé. Par conséquent, lorsqu'un poêle est fourni par un revendeur Morsø agréé, Morsø offre une garantie de dix ans contre tous les défauts de fabrication sur tous les principaux composants extérieurs de ses poêles.

Pour en savoir plus sur la «garantie de 10 ans Morsø / carte d'enregistrement de produit» et enregistrer votre nouveau poêle Morsø en ligne, allez sur le site:  
<http://international.morsoe.com/warranty-registration>

## **IMPORTANT!**

### **Comment chauffer en toute sécurité pour l'environnement et pour vous-même!**

- Utiliser uniquement du bois sec**

Utiliser uniquement du bois sec (teneur en humidité max. de 20%) et non traité. Le combustible doit être coupé en deux et faire de 8 à 12 cm d'épaisseur.

- Allumer**

Allumer avec du bois d'allumage sec (utiliser 1 - 2 kg). Laisser la porte entrouverte et rester à proximité du poêle pendant la phase d'allumage.

- Obtenir une bonne couche de braises**

S'assurer d'avoir une bonne couche de braises avant d'alimenter le feu. Le bois doit s'allumer en 2 minutes. Si les bûches ne s'allument pas, dans des circonstances extrêmes, cela peut provoquer l'allumage des gaz de combustion, ce qui présente un risque de dommages matériels et de préjudices corporels.

- Alimenter le feu**

Pour alimenter le feu, utiliser 2 ou 3 morceaux de bois (pas plus de 2 - 2,5 kg).

- Garantir une ventilation adéquate**

C'est-à-dire des flammes claires et jaunes.

- Ne jamais laisser brûler toute la nuit**

By appointment to The Royal Danish Court

Title: Quality Assurance Plan, Morsø 2B Classic 2020  
(revised June 2021 release)

Pages total: 10, excl this cover page

## Quality Assurance Plan 2B Classic 2020

|                                     |   |
|-------------------------------------|---|
| <b>Product:</b>                     | Morsø 2B Classic 2020 woodstove   |
| <b>Description and information:</b> | <p>Quality Assurance Plan is a plan for assuring the quality for products, tested according to NSPS by taking measurements and checks of some key components, referred to as K-list components. For the Morsø 2B Classic 2020 woodstove the K-list components include:</p> <ul style="list-style-type: none"><li>(i) Firebox: Dimensions.</li><li>(ii) Air introduction systems: Cross-sectional area of restrictive air inlets and outlets, location, and method of control.</li><li>(iii) Baffles: Dimensions and locations.</li><li>(iv) Refractory/insulation: Dimensions and location.</li><li><del>(v) Catalyst: Dimensions and location; N/A</del></li><li><del>(vi) Catalyst bypass mechanism and catalyst bypass gap tolerances (when bypass mechanism is in closed position): Dimensions, cross-sectional area, and location; N/A</del></li><li>(vii) Flue gas exit: Dimensions and location.</li><li>(viii) Door and catalyst bypass gaskets: Dimensions and fit.</li><li>(ix) Outer thermal shielding and thermal coverings: Dimensions and location.</li><li><del>(x) Fuel feed system: For wood heaters that are designed primarily to burn pellet fuel or wood chips and other wood heaters equipped with a fuel feed system, the fuel feed rate, auger motor design and power rating, and the angle of the auger to the firebox; and N/A</del></li><li><del>(xi) Forced air combustion system: For wood heaters so equipped, the location and horsepower of blower motors and the fan blade size. N/A</del></li></ul> |
| <b>Procedure:</b>                   | For each K-list component measurements will be taken according to an attached drawing, where dimensions are outlined.<br>For (viii) the gaskets will be controlled that they are from the right supplier and have the correct size according to inventory list.   |
| <b>Tools needed:</b>                | Rulers/measuring tapes and caliper rule. All measurements in millimeters.   |
| <b>Quality check frequency</b>      | Minimum once per production run or once every 100 stoves, whichever is less.  |

**(i) Firebox: Dimensions**

|                         |   |
|-------------------------|---|
| Register measurement of | <p><b>Section view through top</b></p> <p>This technical drawing shows a cross-section of the firebox from above. Key dimensions are labeled: width 486, height 249, depth 201, and a circular opening diameter of Ø 153.</p> |
| Register measurement of | <p><b>Section view through side</b></p> <p>This technical drawing shows a detailed cross-section of the firebox from the side. Key dimensions are labeled: height 181, depth 182, 197, 212, 486, and 229.</p>                 |

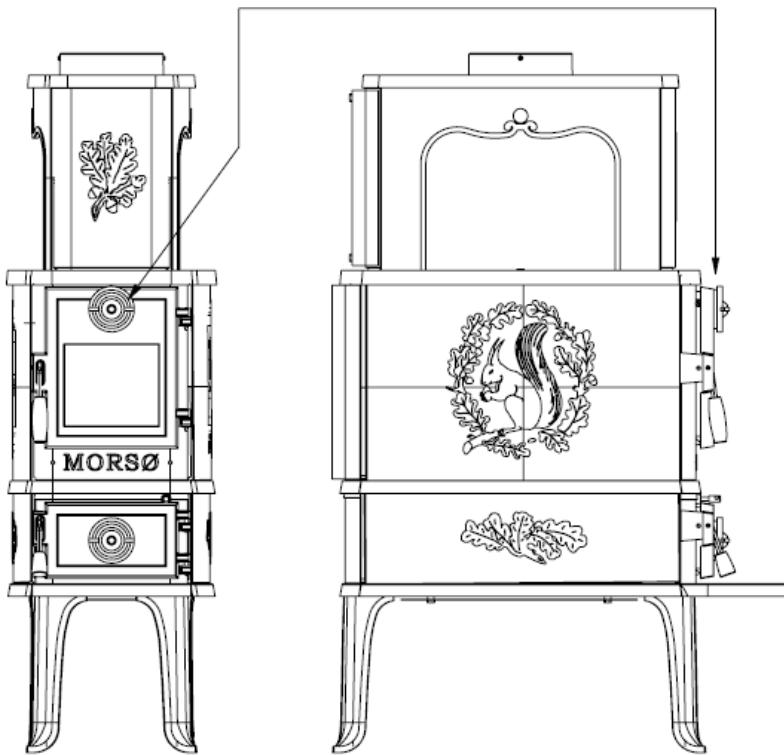

**(ii) Air introduction systems: Cross-sectional area of restrictive air inlets and outlets, location and method of control**

Register measurement of

- Maximum primary air inlet 3.25 turns  $\approx$  4 mm. gap between spinner and frame ( $\approx 918 \text{ mm}^2$ )
- Minimum primary air inlet 0.75 turn  $\approx$  1mm. gap between spinner and frame ( $\approx 212 \text{ mm}^2$ )

Primary Air:

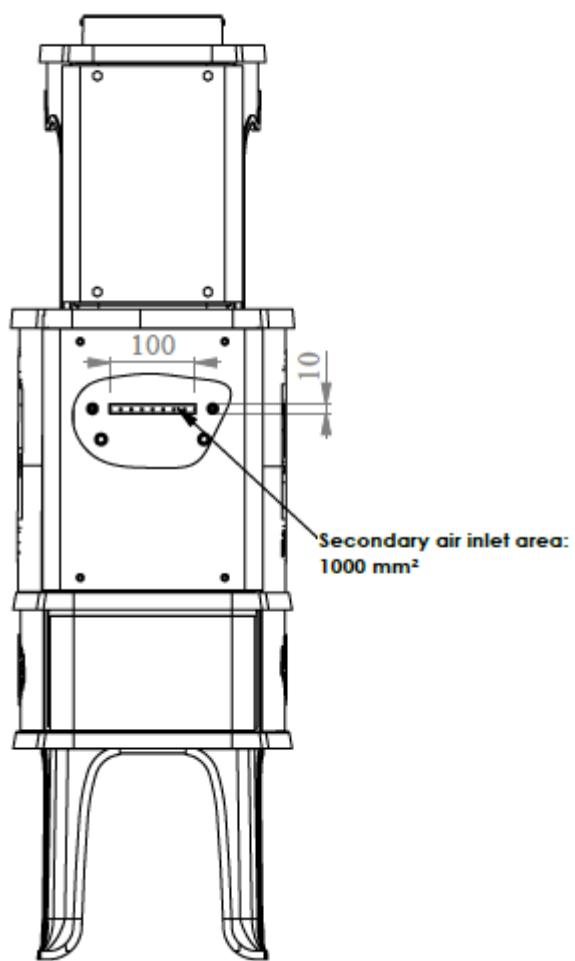

Max.: 3.25 turns  $\approx$  4 mm. gap between spinner and frame  $\approx 918 \text{ mm}^2$   
Min.: 0.75 turn  $\approx$  1 mm. gap between spinner and frame  $\approx 212 \text{ mm}^2$

Register measurement of

- Secondary air inlet area. Fixed.  
Rectangular  
10 x 100 mm hole

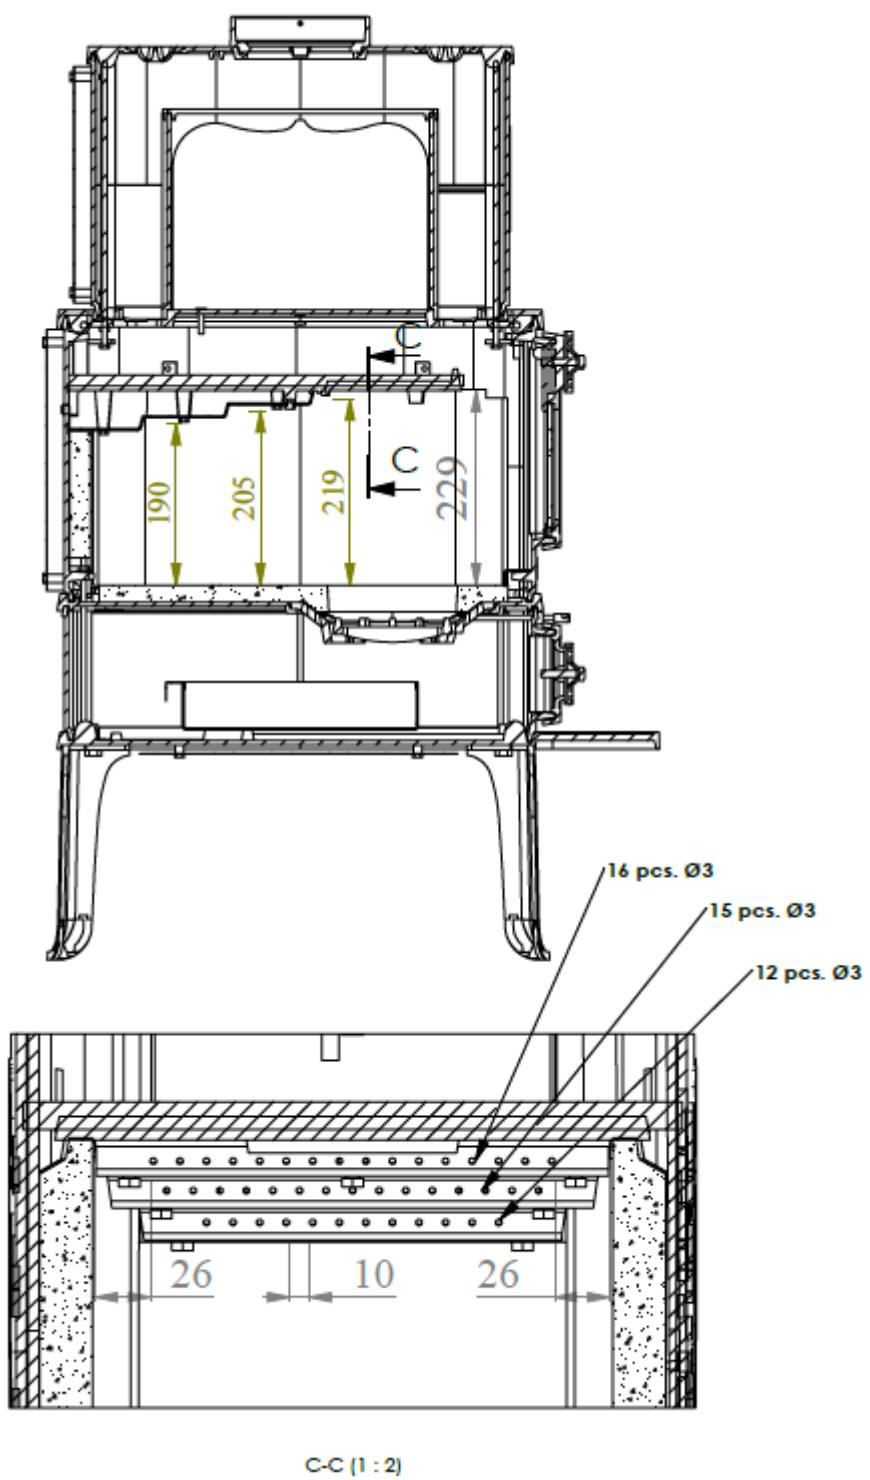

**Broken-out section view**

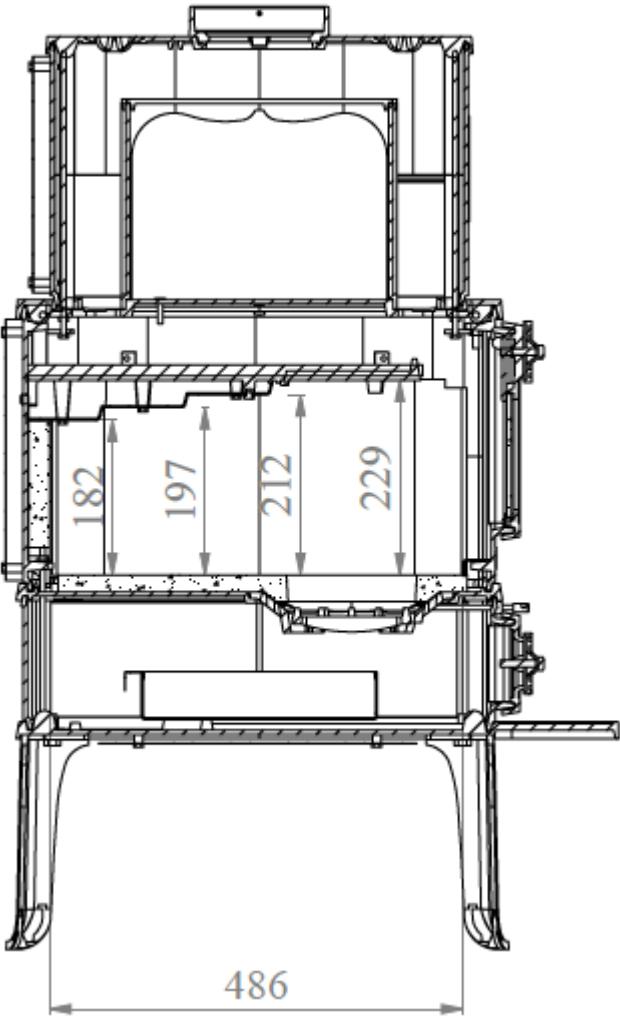

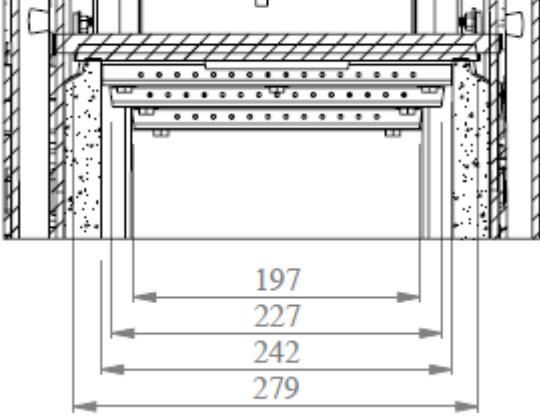

Register measurement of

- Secondary air supplying baffle  
Location and number of nozzles holes

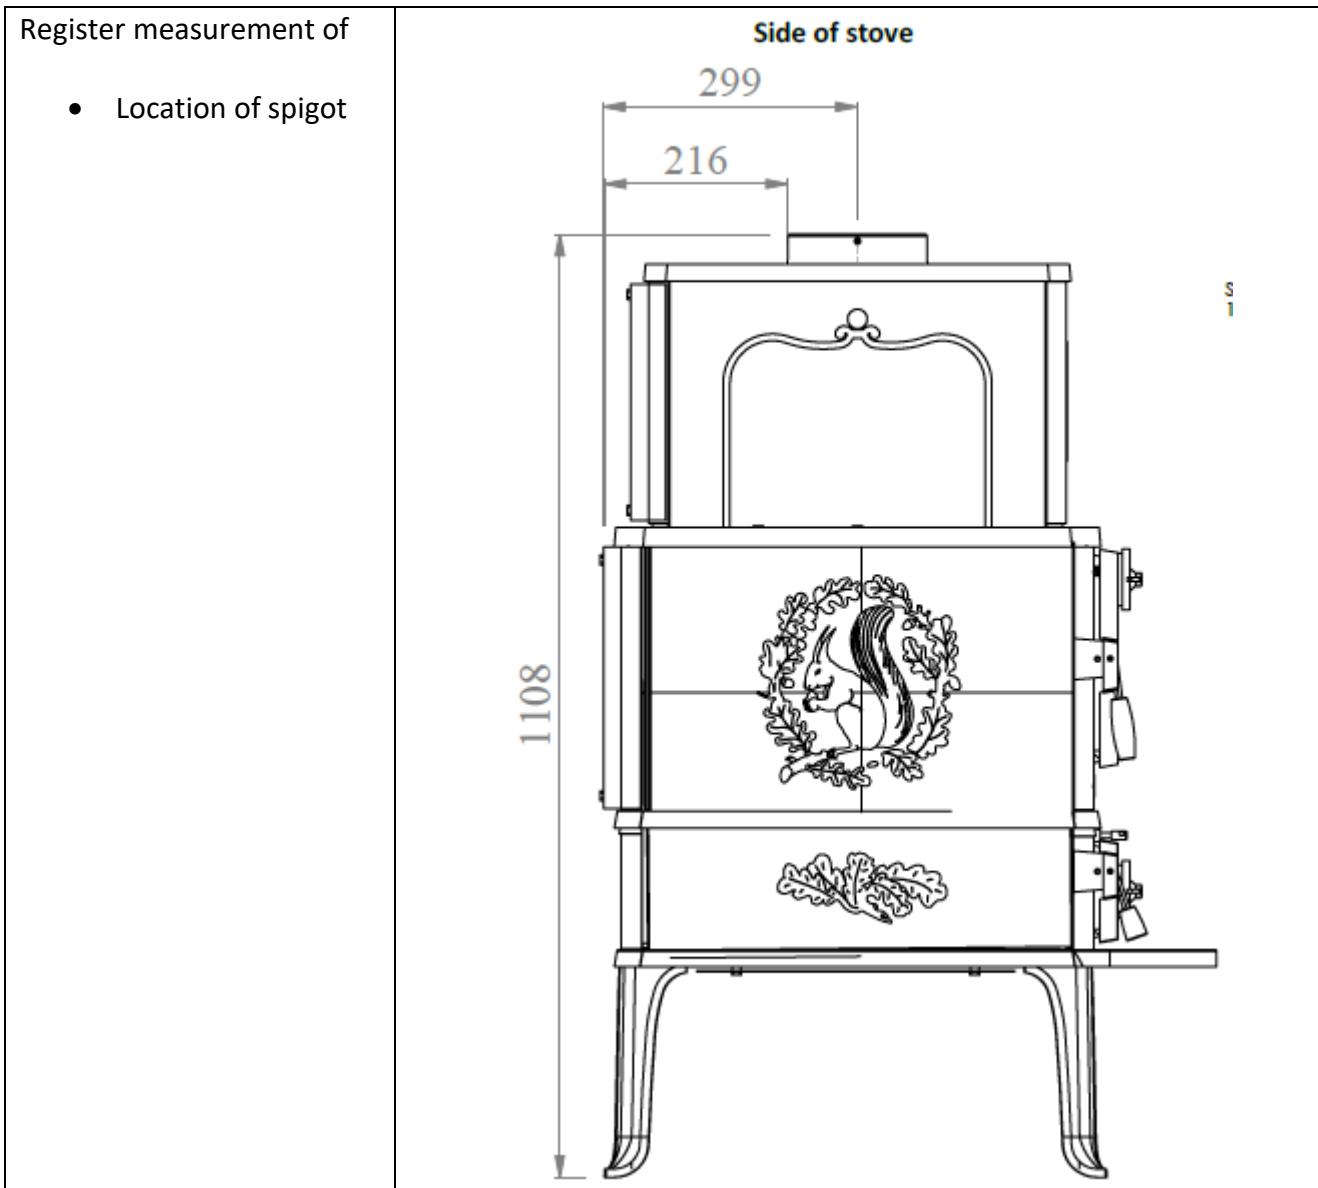

Section view through side

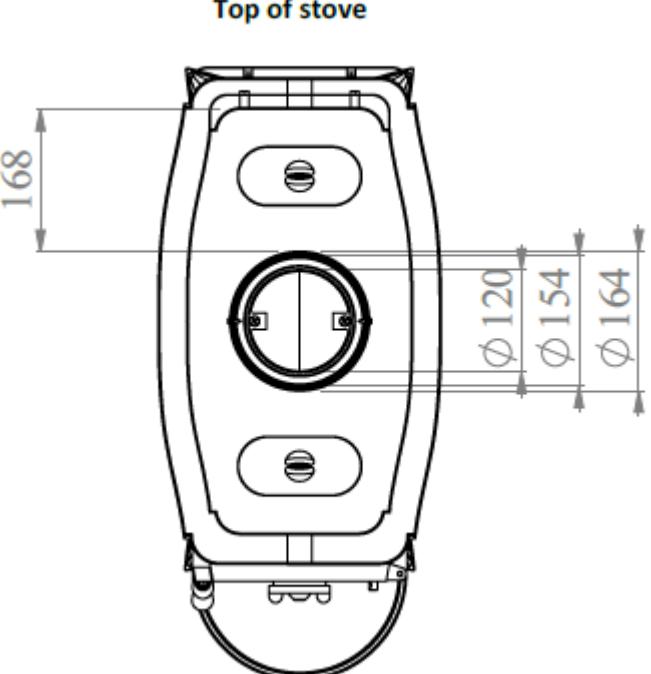

**(iii) Baffles: Dimensions and locations**

|  |  |
|--|--|
| Register measurement of <ul style="list-style-type: none"><li>• Horizontal length of baffle</li><li>• Vertical location height(s) of baffle measured from hearth</li></ul> | <p><b>Section view through side</b></p>             |
| Register measurement of <ul style="list-style-type: none"><li>• Width(s) of baffle</li></ul>   | <p><b>SECTION VIEW THROUGH FRONT OF STOVE</b></p>  |

## (vii) Flue gas exit: Dimensions and location

|   |  |
|---|--|
| Register measurement of   |  |
| <ul style="list-style-type: none"><li>• Horizontal location of spigot</li><li>• Measurement of flue outlet diameter, <math>\varnothing 164</math> (outer), <math>\varnothing 154</math> (inner), <math>\varnothing 120</math> (passage)</li></ul> |  |

#### (viii) Door and catalyst bypass gaskets: Dimensions and fit

Register that the used gaskets robes are correct sized and of same fabric according to the inventory list.

No measurements.

The Gasket robe are bought from external supplier with own quality control.

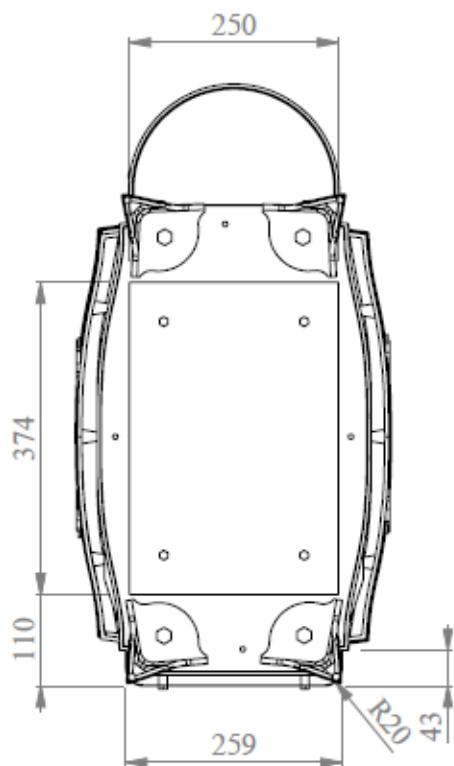

## (ix) Outer thermal shielding and thermal coverings: Dimensions and location

|                         |   |
|-------------------------|---|
| Register measurement of | <p style="text-align: center;"><b>Section view through side</b></p> <p>The diagram illustrates a cross-section of a stove's outer thermal shielding. It features a complex arrangement of outer shells and inner components. Key dimensions are highlighted in blue:</p> <ul style="list-style-type: none"><li>Top gap: 1</li><li>Side gap: 20</li><li>Total height: 278</li><li>Middle gap: 308</li><li>Bottom gap: 10</li><li>Base width: 374</li></ul> |
|-------------------------|---|

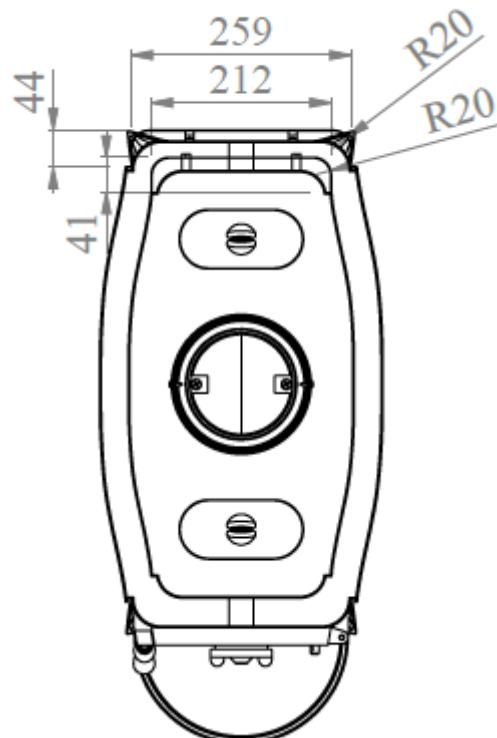

Register measurement of

- Width of radiation shields

**BOTTOM VIEW**

**Top View**

## HF og MF 39

Test run summary, Cordwood test ..... Test \_\_\_\_\_, Date \_\_\_\_\_

| Time   | Event  |
|--------|--|
| 113400 | Ignition of the Cold Start part test using the gas touch for 1 minute. The air valve is set in position 100% (ignition). 0.003 kg kindling and 0.817 kg start-up fuel is added 19.7 % DB |
| 113945 | Ignition is over, the door is closed. after 5 3/4 min  |
| 115526 | End of Kindling+Start-up at 550 g, taring of the platform scale to g; evening out of the embers  |
| 115530 | Loading of HF fuel load using in total 3.190 kg firewood at moisture content 16.2 % wb 19.3 % total mass (ug)  |
| 115625 | End of loading time at 55 seconds  |
| 120125 | Door action open for 5 minutes   |
|        | Valve action Fixed at 100% op = 5 3/4 and  |
|        | The air valve adjusted to position being the maximum combustion air supply   |
|        | Any observations oven branch might be due end ign. Rostemp stabiliser sig for 180 °C   |
| 123400 | Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading 11828,32 nl   |
| 130451 | End of the High Fire test at 950 g, taring of the platform scale to g and evening out of the embers.<br>#The air valve is reset to position 100% (ignition) open                         |
| 131440 | The LF/MF fuel load of in total 5.736 kg is entered at 0.675 kg<br>Moisture content 16.3 %wb → 19.4 % DB   |
| 131525 | End of loading time after 45 seconds   |
| 131930 | The air valve is adjusted to the position<br>At 4.25 kg corresponding to 15 % of the test load mass has been combusted, the air valve is set to its final position, 1.25 and/or 2.5      |
|        | The air valve is set right away to its final position (dash out the option not chosen)   |
|        | Any observations Rostemp MF stabiliser sig for 180 °C  |
| 141440 | Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading 12471,65nl  |
| 163818 | The Low/Medium Fire test is done at platform scale reading kg 0.675 Kg   |
| 1430   | Any remarks or anomalies<br>Ilden begyndte at 10 min hvor dor var 600 g tilbage til slut med på 5 gram efter et bølge og et ud.  |

## Test run summary, Cordwood test ..... Test \_\_\_\_\_, Date \_\_\_\_\_

| Time     | Event  |
|----------|--|
| 10:05:58 | Ignition of the Cold Start part test using the gas touch for minute. The air valve is set in position <u>100 % open</u> (ignition). <u>0.605</u> kg kindling and <u>0.909</u> kg start-up fuel is added <u>19.5 % DB</u> <u>16.2 % OM</u>  |
| 10:11:54 | Ignition is over, the door is closed.  |
| 10:30:40 | End of Kindling+Start-up at <u>550</u> g, taring of the platform scale to <u>550</u> g, evening out of the embers  |
| 10:31:00 | Loading of HF fuel load using in total <u>3.183</u> kg firewood at moisture content <u>16.1</u> % wb ( <u>19.2 % ash</u> )   |
| 10:31:55 | End of loading time at <u>53</u> seconds   |
| 10:36:50 | Door action <u>Door open for 5:50 in total</u><br>Valve action <u>Kept 100 % open</u>  |
|          | The air valve adjusted to position _____ being the maximum combustion air supply   |
|          | Any observations<br><u>No fuse error</u> <u>Total dry wood combusted 3.142</u> <u>Burn Rate 1.943 kg/h</u><br><u>residue just 15.12 %</u>  |
| 11:05:58 | Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading <u>13924.576</u> nl   |
| 11:32:25 | End of the High Fire test at <u>840</u> g, taring of the platform scale to _____ g and evening out of the embers. <u>Same</u> #The air valve is reset to position _____ (ignition) <u>Over</u><br>The LF/MF fuel load of in total _____ kg is entered<br>Moisture content _____ %wb<br>End of loading time after _____ seconds |
|          | The air valve is adjusted to the _____ position _____<br>At _____ kg corresponding to 15 % of the test load mass has been combusted, the air valve is set to its final position, _____ -OR-<br>The air valve is set right away to its final position _____ (dash out the option not chosen)<br>Any observations                |
|          | Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading _____ nl<br>The Low/Medium Fire test is done at platform scale reading 0 kg   |
|          | Any remarks or anomalies   |
